DEPARTMENT OF LABOUR, CANADA

Minister—HON. W. A. GORDON

Deputy Minister—H. H. WARD

# THE LABOUR GAZETTE

VOLUME XXXII

FOR THE YEAR  
1932

*286968  
6:5:33*

OTTAWA  
F. A. ACLAND  
PRINTER TO THE KING'S MOST EXCELLENT MAJESTY  
1933

*Vol. 32 vol. 32 & Labour Gazette Dept. of L.*

ERRATA

- On page 142—The title of Table X *should read*: "Detailed list of strikes and lockouts in Canada, 1931" (not 1930).
- On page 162—In Table I, under "Ontario," the total number of pensioners on December 31, 1931, *should read* 41,228 (instead of 1,228).
- On page 379—In the first side-heading in column 2 for "Unemployment Insurance Act" *read* "Workmen's Compensation."

# INDEX

## Accidents, Industrial:

### Canada—

fatalities during 1932, 625, 936, 1236; during 1931, 235, 630, 1241; during 1930, 242. fatal and non-fatal accidents recorded by provincial workmen's compensation boards, 371.

fatal industrial accidents in 1931 by industries, by causes, and by provinces, 362.

reduction in number of fatalities due to explosives, 775.

statistics of accidents to electric workers, 1152.

statistics of railway accidents, 189.

THE DEPARTMENT OF LABOUR, OTTAWA, CANADA

VOLUME 32]

JANUARY, 1932

[NUMBER 1

## NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

### Monthly Summary

**I**NDUSTRIAL employment in Canada at the beginning of December showed the reduction usual at this season; the losses, though smaller than on the same date in 1930, exceeded the average decline reported during the last ten years. The Dominion Bureau of Statistics tabulated statements from 7,813 firms (each with at least 15 employees), employing an aggregate staff of 901,854 persons, as compared with 937,494 in the preceding month; the employment index stood at 99.1, compared with 103.0 on November 1, and 108.5, 119.1, 116.7, 108.1, 102.3, 96.5, 91.9, 96.9, 96.3 and 88.3 on Dec. 1, 1930, 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively. These indexes, which are based upon the average number of employees of the reporting firms in the calendar year 1926 as 100, are indicative of conditions in all industries except agriculture, fishing, hunting and highly specialized business.

At the beginning of December, 1931, the percentage of unemployment reported to the Department of Labour by local trade unions was 18.6, in comparison with percentages of 18.3 at the beginning of November and 13.8 at the beginning of December, 1930. The December percentage was based on the returns received by the Department of Labour from a total of 1,819 labour organizations, covering a membership of 189,031 persons.

Reports received during November, 1931, from the offices of the Employment Service of Canada indicated a decline from October in the volume of business transacted, as shown by the average daily placements effected, but recorded a gain when a comparison was made with the business effected during November a year ago. This was due to the various municipal and provincial relief works in progress throughout the Dominion. Vacancies in November, 1931, numbered 44, 113, applications 71,483, and there were 43,326 placements in regular and casual employment.

The average cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices

in sixty-nine cities was little changed at \$7.85 for the beginning of December as compared with \$7.82 for November; \$10.10 for December, 1930; \$11.83 for December, 1929; \$11.31 for December, 1928; \$11.17 for December, 1927; \$11.18 for December, 1926; \$11.56 for December, 1925; \$10.58 for December, 1924; \$10.73 for December, 1923; \$10.39 for December, 1922; \$11 for December, 1921; \$14.84 for December, 1920; \$16.92 for June, 1920 (the peak); \$13.65 for December, 1918; and \$7.96 for December, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics based upon prices in 1926 as 100 was slightly lower at 70.3 for December as compared with 70.6 for November; 77.7 for December, 1930; 96 for December, 1929; 94.6 for December, 1928; 97.2 for December, 1927; and 97.9 for December, 1926.

The loss in working time caused by industrial disputes in Canada in December was less than in the preceding month but was much greater than the corresponding loss in November last year. Fourteen disputes were in progress at some time during the month, involving 1,268 workers and resulting in the loss of 14,927 working days. Corresponding figures for November, 1931, were: 11 disputes, 1,660 workers and 22,489 working days; and for December, 1930, 8 disputes, 723 workers, and 8,661 working days.

### Industrial Disputes Investigation Act

During December the Department received majority and minority reports from the Board of Conciliation and Investigation appointed in connection with the dispute involving the Winnipeg Electric Railway Company and its employees. A new application from other employees of the same company was received towards the close of the month. Applications for the establishments of Boards from two groups of employees of the Quebec Railway, Light and Power Company were received, but settlements in both cases were effected by the agency of the Department's Conciliation Officers. The text of the

reports mentioned above, and full details of recent proceedings under the Act, are given on page 15.

### **Wages, hours of labour, and prices in Canada, 1931**

Two supplements to this issue of the *LABOUR GAZETTE*, 1930 and 1931 are now ready, and will shortly be forwarded to subscribers.

The first deals with Wages and Hours of Labour in Canada, 1930 and 1931, including the following classes of labour; (1) building, metal, printing, electric railways, civic employment, and longshoremen; (2) mining, lumbering, electric power, telephone; and (3) factory labour in various industries. The second supplement deals with the movement of wholesale and retail prices and changes in the cost of living in Canada and various other countries in 1931 and in recent years.

### **Immigration and colonization policy of Canada**

The Hon. W. A. Gordon, Minister of Immigration and Colonization, writing in the *Commercial and Financial Review* of 1931,

published as a supplement to the *Montreal Gazette*, January 2, describes the work of his department during the past year:

"Thousands of Canadian families," he writes, "have turned from dependence upon industry in the cities to the assurance of a subsistence on the land. Whilst owing to existing economic conditions, which are world-wide, limitations upon immigration have been necessary, the change in regulations to produce this do not apply to the British Isles, the British Dominions or the United States, although in these countries the policy of no solicitation has been rigidly adopted. Every immigrant, regardless of country of origin, must establish, before admission is granted, that he will not directly or indirectly contribute to unemployment in this country. As the result of this policy the number of immigrants entering Canada has declined sharply, the actual decrease being 77 per cent.

"Despite the fact that the immigration figures disclose a marked decline, a close survey shows that we are receiving a very good class of immigrant. One of the vital factors of an immigration policy is to insure that immigrants admitted are of such a type and character as will successfully fit into the social and economic life of their new homeland and quickly become assimilated into its national fabric. Canada requires a sturdy self-reliant class of immigrant. If these facts are lost sight of and other less vital considerations predominate, the foundation is being laid for troubles

in the future. The experience of the past year has disclosed the fact that a good class of British emigration is coming to Canada without governmental or other assistance, and it is expected that there will be a greater flow of British people to Canada as conditions improve. Farmers from the United States, having substantial capital and experience under conditions such as are found in Canada, are also being admitted. The Department, in co-operation with the railways, has carried on an active campaign to place Canadians in productive work on the land. The activities of these organizations have resulted up to the present in the placing in farm employment of 12,682 single men, and the settlement on farms of 6,040 families without any expenditure of public funds in the form of financial assistance; the total placement of men, women and children as a result of this campaign is over 42,000.

"Immigration, even under present conditions, does not stand still. Immigration policies must be progressive and adapted to changing conditions both in Canada and in the world at large. With the return of better times Canada looks forward to furnishing increasing opportunities for the best type of peoples. The objective of the Department of Immigration and Colonization is to follow the course which will result in the greatest permanent good to Canada."

### **Manufactures in Canada in 1931**

The Hon. H. H. Stevens, Minister of Trade and Commerce, writing in the same publication on the

"Economic Position of Canada as 1931 closed," makes the following comments on conditions in the manufacturing industries during the year:

"The manufacturers of Canada have certainly had their difficulties to face in 1931, as the result of the declining prices of their products. Generally speaking, they have had to reduce the scale of their operations and the number of their employees. Thus, on the basis of the monthly reports of some 4,000 of the larger manufacturers regarding the number of their employees, we have been able to deduce that the average index number of employment in all manufacturing industries in the first eleven months of 1931 has been 95.9 as compared with 109.7 in the same period of 1930, indicating a reduction of about 12½ per cent in working forces as compared with the previous year. Among the manufacturing industries which have best stood the strain of the depression without seriously reducing their working forces has been the leather and boot and shoe industry, where the index number of employment is

practically the same as in 1930. The textile industry, too, shows the comparatively small reduction of 3.75 per cent in employment. The chemical industries, again, show a reduction of less than three per cent in the number of their employees. The electric current industry, too, shows a comparatively small falling off of about three per cent in the number of its employees as compared with 1930, though the electric apparatus industry shows approximately the same reduction of one-eighth as the grand total of manufacturing industries. Summing up, it may be stated that if the activity of the manufacturing industries of Canada is measured by the number of their employees, these industries were operated in 1931 on a basis about half way between their operations in 1925 and their operations in 1926. Of course, the situation with regard to production is really considerably more favourable than this, on account of the labour-saving machinery installed in our factories in recent years, but the saving of labour thus effected does not lend itself to statistical measurement."

#### **Social insurance conventions at Geneva**

As is noted in the "International Labour Organization" section of this issue, the subject of Invalidity, Old Age and Widows' and Orphans' Insurance forms the second item in the agenda for this year's conference. A report on the subject recently issued at Geneva points out that a convention on this subject would complete the cycle of general conventions on social insurance. The decisions taken with regard to the victims of industrial accidents or occupational diseases, particularly at the 1925 Session, were followed in 1927 by two draft conventions on sickness insurance for workers in industry, commerce and agriculture.

The conception of social insurance as a "corollary to the wages system," it is stated, forced itself upon the International Labour Organization at the Conference of 1925, when a resolution was adopted which defined the position of social insurance in the economic and social system (LABOUR GAZETTE, July, 1925, page 708). That resolution stated: "A system of labour regulation, if true to the principle of social justice, must secure the effective protection of the workers against risks endangering their livelihood or that of their families. . . . This protection can best be attained by means of the establishment of a system of social insurance granting clearly defined rights to the beneficiaries." The same Conference took the first step towards translating this aspiration into practice by requesting the Governing Body to place on the agenda of

early Sessions of the Conference first of all the question of sickness insurance, and then the question of invalidity, old-age and widows' and orphans' insurance. The request was repeated at the Tenth Session in 1927, and the Governing Body acceded to it as soon as the general progress of the work of the Organization permitted.

#### **First report of Quebec Social Insurance Commission**

The first report of the Commission on Social Insurance in the Province of Quebec (LABOUR GAZETTE, May, 1930, page 516; November, 1930, page 1236) was presented in the Legislature on January 12 by the Hon. C. J. Arcand, Minister of Labour for the province. The recommendations contained in this report will be given in a future issue. Briefly the Commissioners in their first report recommend allowances to needy mothers of one or more children; the formation of a provincial bureau for the protection of children; the encouragement of recreational facilities in all schools and institutions; the raising of the age for children leaving children's homes to 16 years; subsidies by the government to institutions to develop and perfect their system of placing children in employment, etc.

#### **Labour Code of the Province of Quebec**

A revised edition has been published of the "Code of Labour and Industrial Laws of the Province of Quebec," including the labour legislation enacted in 1931. This publication is the work of Mr. Gustave Franco, now chairman of the Women's Minimum Wage Commission of the Province, and gives in convenient form the text of all provincial laws and regulations, as well as certain outstanding Dominion measures, which effect labour in the Province. The new provincial laws of the past year include the new Labour Department Act, establishing a separate Labour Department for the Province; and the Workmen's Compensation Act of 1931, which established a Board for the Province. Prominence is given to the Scaffolding Inspection Act, illustrations being added for the purpose of showing the proper methods to be followed in the construction of scaffolding.

Among the Acts of the Dominion that are included in the Code are the Industrial Disputes Investigation Act, the Conciliation and Labour Act, the Old Age Pensions Act (with regulations thereunder), the Fair Wages and Eight-Hour Day Act, 1930; the Alien Labour Act; The Vocational Education Act, 1931; The Unemployment and Farm Relief Act, 1931, and other measures.

### National unemployment fund in Spain

A decree of the Spanish Government, dated September 30, 1931, contained administrative regulations in virtue of the Decree of May 25, 1931, establishing a National Unemployment Fund in Spain. The board of management of the National Unemployment Fund will act as an advisory body to the Government on all questions concerning unemployment and the organization of placing, undertaking all the necessary study and research work for this purpose. The subsidies granted from the Fund to organizations insuring their members against unemployment have been fixed at 50 per cent of the benefits granted. These organizations must pay in every month to the Solidarity Fund, set up by the Decree of May 25 to meet any increase in unemployment, 5 per cent of the unemployment insurance contributions collected by them during the preceding month. As a general rule the resources of the Solidarity Fund are intended to be used only for the transport and occupational rehabilitation of the unemployed. The National Unemployment Fund will guarantee the payment to other social insurance institutions of the compulsory contributions to be made by employers and workers on behalf of the unemployed. No claim to benefit will be recognized in the case of unemployed workers who leave their situation without valid reason, who have left the country, or who have refused employment for which they were fitted.

These regulations came into force on January 1, 1932.

### British unemployment statistics

Recent amendments in the British Unemployment Insurance scheme, by which certain classes of workers are excluded from participation, must now be taken into account in connection with the study of the periodical statistics of unemployment in Great Britain. The effect of the changes are analysed in the *Ministry of Labour Gazette*, December, 1931. The amendments made in the Act last year, it is stated, affected chiefly seasonal workers and married women, but also concerned the few persons who habitually worked for less than a full week. Further, by an order made under the recent National Economy Act, 1931, an applicant for "transitional payments" is required to prove that he is in need of such payments. It is estimated that by November 23, 1931, approximately 55,000 persons (including 4,000 men and 51,000 women) whose claims have been disallowed, had ceased to register at Employment Exchanges, although

apparently they had not obtained employment. Between October 19 and November 23 the numbers on the registers of Employment Exchanges fell by 122,763, or approximately 123,000. This decline in unemployment is analysed as follows:—

Effect of new conditions for the receipt of benefit and transitional payments. 55,000  
Improvement in employment..... 68,000

### Inquiry in Alberta on Workmen's Compensation

The Special Committee appointed by the Alberta Legislature at its last session to examine the provisions of the Workmen's Compensation Act during the recess (LABOUR GAZETTE, April, 1931, page 389), held their first meeting in December. The Hon. R. G. Reid, Minister of Lands and Mines and Provincial Treasurer, is the chairman of the committee, with Mr. R. Addison clerk of the Legislative Assembly as secretary. The members include five employers, five labour representatives and five members of the Legislature.

The purpose of the investigation is to ascertain what, if any, revision of the Act is desirable.

### Value of vocational rehabilitation in industry

The annual report of the United States Federal Board for Vocational Education, recently issued, gives an account of the Board's success in the work of "rehabilitating," in a new field of industry, workers whose injuries preclude them from following their original occupations. Vocational rehabilitation in the 44 States in which such activities have been set up is carried on under the supervision of the State department of education. The function of the Federal Board for Vocational Education is to co-operate with the States in their rehabilitation programs. Vocational rehabilitation as defined by the Board is the fitting of a disabled person for remunerative employment through vocational guidance, assistance in removing a handicap, vocational training for an occupation, placement in a job, or through a combination of these services.

The report states that workers who have been re-trained for a new occupation are frequently able to earn higher wages than they had earned before their disablement. The extent of the benefits to disabled men and women are shown in the statement that whereas, prior to rehabilitation, 69 per cent of 1,000 disabled persons included in the survey were earning no wage, immediately after rehabilitation 73 per cent of them were earning over \$15 a week. It appears, further, that

during the years intervening between rehabilitation and a "follow-up" survey made by the Board, the proportion of those rehabilitated who were earning \$15 a week or more had increased to 80 per cent.

The average cost of rehabilitating disabled persons during the four-year period covered by the Board's survey was \$291 for each person. The State and Federal Governments, therefore, expended for rehabilitating the 1,000 cases included in the survey \$291,000. The total earning power of the group prior to rehabilitation was \$332,132 a year, as compared with \$1,035,780 immediately after rehabilitation, and \$1,243,301 at the time of the "follow-up."

### Examples of technological displacement of labour

In a pamphlet entitled "Employment Regulation in the U.S.A.," recently published by the American section of the International Chamber of Commerce, the

following conspicuous examples of technological displacement of labour are cited:—

"A brickmaking machine can produce 40,000 bricks a day. A day's output for one man using hand methods is approximately 450 bricks. A cigar-making machine can produce a daily output of cigars equal to the volume of production of 15 men making cigars by hand. A huge steam shovel can excavate a quantity of earth which would require two hundred unskilled workers to perform the same task. One operator tending a razor blade making machine can produce 32,000 blades in the same time required by 500 men using hand methods. A mechanical conveyor for shiploading operated by four men performs work equivalent to that formerly requiring 100 men using hand trucks. One male and two female employees operating two automobile tire manufacturing machines can produce twenty times as many tires per day as were formerly made manually by a single worker. The use of automatic and semi-automatic electric light bulb-making machinery has increased the productivity per individual worker by 3,000 per cent. One man operating a bottle-making machine can produce as many bottles as 18 men using hand methods."

### Growth of co-operation in Great Britain

The *Review of International Cooperation*, in commenting on the annual statistics of the British Co-operative Union, describes

the progress made during recent years in the number of members of affiliated organizations as indicating the "co-operative conquest of Britain." In 1901, it is stated, the members

of the retail consumers' societies numbered 1,785,072 out of a total population of 41·5 millions. In 1930 they numbered 6,402,966 out of a total population of 49 millions. In one generation, therefore, the co-operative membership has risen from less than one-twentieth to almost one-seventh of the population. Most of this increase has taken place within the last fifteen years and is divided between two distinct periods. The first of these began in 1915, when for the first time the annual increase reached 200,000, and continued until 1920, in which year the annual increase reached the peak figure of 373,375. This was the period of rational food supplies and rapidly climbing prices. There followed four years of comparatively little progress. In 1922 there was actually a decline in the total membership, the only one ever recorded. By 1925, however, the annual increase was once again in excess of 200,000, and this marked the beginning of the second period of rapid advance which is not yet ended. During the last six years a million and a half have been added to the membership, the increase in 1930 being 233,972. The peak year of the period was 1927, when the annual increase reached the record figure of 392,310. Since then each successive year has seen a smaller net addition.

When the geographical distribution of these increases is examined, it appears that England and Wales have tended to overtake Scotland. The proportion of consumer co-operators to population in Scotland still remains the highest of the three countries, and works out at 15·4 per cent. In the county of Clackmannan the percentage of co-operators to population is 41·7, and in the industrial counties of the Forth and Clyde basins every fifth person is a co-operator. In England the percentage for the whole country is 14·4. As might be expected the counties with the largest total co-operative membership are Lancashire, with a total of almost a million, Yorkshire, with 873,000, and London with 730,181. A generation ago London, in common with certain other of the great cities, was charted as a co-operative "desert." In these three counties, however, the percentage of co-operators to population is still under 20, and in respect of co-operative "density" they are easily surpassed by Northamptonshire which has 107,000 co-operators in a total population of 361,000. This is an area in which consumers' co-operation appeared early, and in which the co-operators have since very successfully combined store-keeping with production on co-partnership principles.

### **Handbook of Labour Statistics of United States**

The Bureau of Labour Statistics of the United States Department of Labour has published the 1931 edition of the "Handbook of Labour Statistics," being the third volume in this series (Bulletin No. 541, Miscellaneous series, 924 pages). The volume not only includes information in regard to those subjects that are directly covered by the activities of the Bureau of Labour Statistics and other official agencies, but also incorporates material supplied from non-official sources. The introduction points out that some of the former hindrances to the collection of satisfactory labour statistics have recently been overcome through the increasing co-operation of employers, workers, and the various public and private bodies. The scope of the new volume is indicated by the titles of the chapters, which are as follows:— Arbitration and conciliation; Child labour; Co-operation; Cost of living; Employment offices; Employment statistics; Hawaii—labour conditions; Housing; Immigration and emigration; Industrial accidents; Industrial health; Insurance and benefit plans; Labour organizations; Medical services and costs; Minimum wage; Negroes: industrial and social condition; Old-age pensions and relief; Older worker in industry; Philippine Islands—labour conditions; Porto Rico—labour conditions; Prices, wholesale and retail; Productivity of labour; Sickness and death statistics; Small loans; Strikes and lockouts; Turnover of labour; Unemployment and insurance relief; Wages and hours of labour; Women in industry; Workmen's compensation.

### **Unemployment relief in South Africa**

The Government of the Union of South Africa recently adopted measures for dealing with the prevailing unemployment, by which persons of European origin and Cape coloured persons are mainly affected, the native workers being found to be suffering to a less degree. The relief policy follows the lines of certain recommendations that had been submitted by a conference of municipalities in the Union, as follows: (1) That it is possible and desirable for municipalities to increase the number of "civilized" labourers in their regular employ. It is considered that municipalities should aim at a figure of 20 per cent of their total unskilled labour force being "civilized" labour; (2) That the minimum rate of pay for unskilled "civilized" labourers should be fixed at 6s. a day; (3) That the Government subsidize municipalities employing such labour in their regular employ for a period of three years on the basis of 50

per cent for the first year, 35 per cent for the second year and 20 per cent for the third year of the difference between the cost of "non-civilized" labour and the minimum wage of 6s. a day; (4) In order to discourage migration from rural to urban areas no employee should be engaged for employment on subsidized works unless he has attained at least two years' continuous residence in the municipal area in which work is being performed and has been in continuous employment for at least six months during such period. Such six months shall not include employment on railway work or relief works.

### **Unemployment and hours of work**

The Governing Body of the International Labour Organization, at its recent 55th session, adopted a proposal submitted by the French Government representative, authorizing the director to call together the Unemployment Committee before the end of the year, in order that it might be informed as to the development of the work begun and consider the question of securing a better arrangement of hours of work by means of international agreements, either on a general basis or for individual industries.

It is stated that one result of the persistent economic depression has been a growth of interest in the subject of hours of work. In the countries most severely stricken by unemployment, many employers have voluntarily reduced working hours in order to be able to provide work for a larger number of workpeople. The possibilities offered by such a step as a means of easing the present situation are attracting attention in almost all directions, and public authorities are considering whether it is not for them to take action, in some cases for a "redistribution of work" by the means indicated above as an emergency measure to cope with the present crisis, and in other cases for a permanent shortening of the working day or week. So far four Governments—those of Germany, the Free City of Danzig, Poland and Czechoslovakia—have taken such action.

The action of the International Federation of Trade Unions to promote the adoption of shorter working hours is noted elsewhere in this issue.

### **United States participation in League of Nations and I.L.O.**

A recent pamphlet (No. 274), published at Worcester, Mass., by the Carnegie Endowment for International Peace, describes the measure of the co-operation of the United States with the League of Nations and with

the International Labour Organization. "The United States," it is stated, "could not continue to ignore an organization of fifty or more nations, meeting to carry on the world's affairs. A method of correspondence and collaboration had to be worked out. Gradually a form of cooperation has been evolved which has made it possible for the United States to play an increasing rôle in the League of Nations, and which, at the same time, does not involve the United States in the work of the Assembly and Council. . .

"America's present relationship with the League may be said to have the following principal characteristics; regular correspondence, through the appointed diplomatic channels; official Government participation in the projects which seem to be in harmony with the traditional interests of the country; Government representations through 'unofficial' delegates in certain other projects of the League; the participation of private American citizens in practically all, except the political, activities of the League; financial contributions by the United States delegates; and gifts by American individuals and organizations."

"The United States," the pamphlet states elsewhere, "is not participating directly with the greater part of the work of the International Labour Organization. Official government co-operation has been confined to the Organizing Committee at the Peace Conference, the calling of the Washington Conference, and two technical committees on Anthrax and Silicosis, and the submission of data and statistics. Unofficial observers have attended three sessions of the International Labour Conference; private individuals have taken part in the work of several technical committees; and private funds have supported important research activities of the International Labour Organization. In spite of the fact that more correspondence and inquiries come in from the United States than from any other country except England and France, comparatively little is known in the United States about the International Labour Organization. The government, employers, and workers of the United States have had no part in the regular meetings of the General Conference and Governing Board, or in the preparation of the Draft Conventions and the Recommendations drawn up by these bodies. As an industrial country, however, the United States is bound to follow with more and more interest the work of an organization which is attempting to bring about concerted action on labour standards, and which already has the support of all important industrial countries except the United States and Russia."

### **Proposed Child Labour amendment to United States Constitution**

Reference is made on another page of this issue to the ratification by Colorado of the proposed "child labour" amendment to the United States Constitution (LABOUR GAZETTE, May, 1924, page 446; August, 1924, page 630). The proposed constitutional amendment is as follows:—

Section 1.—The Congress shall have power to limit, regulate, and prohibit the labour of persons under eighteen years of age.

Section 2.—The power of the several States is unimpaired by this article except that the operation of State laws shall be suspended to the extent necessary to give effect to legislation enacted by the congress.

Before the amendment can become effective it must be ratified by three-fourths of the States. Six states have now adopted the amendment: Arizona, Arkansas, California, Montana, Wisconsin and Colorado.

Six States have taken no definite action—Alabama, Illinois, Mississippi, New Jersey, New York, and Rhode Island.

The proposed amendment has been ratified by one House of the Legislature in New Mexico, and Nevada. It has been rejected by both Houses in Connecticut, Delaware, Florida, Georgia, Indiana, Kansas, Kentucky, Maine, Maryland, Massachusetts, Minnesota, Missouri, New Hampshire, North Carolina, Pennsylvania, South Carolina, South Dakota, Tennessee, Texas, Utah, Vermont, Virginia, Washington, West Virginia. The amendment was rejected by one House in Idaho, Louisiana, Michigan, Nebraska, North Dakota, Ohio, Oklahoma, Oregon, and Wyoming. A vote was indefinitely postponed by one House in Iowa.

During the month of December a total of 3,286 accidents were reported to the Ontario Workmen's Compensation Board in the industries in Schedule 1 of the Act, 22 of which were fatal cases; in Schedule 2 industries 261 were reported including 1 fatal case; and 541 Crown, 7 of which were fatal, were reported during the month making in all 4,088, of which 30 were fatal.

The International Federation of Trade Unions recently issued a study of the arrangements made by trade unions in various countries to provide holiday accommodation and facilities for travel for their members. Holiday homes belong either to the entire trade-union organization concerned, or to individual unions, and are intended to enable workers to enjoy the privilege of visiting other countries. Union travel bureaus are maintained in Great Britain, Belgium, Germany, Poland, Sweden and Switzerland.

## GENERAL REVIEW OF THE INDUSTRIAL SITUATION

### Employment

THE employment situation at the end of December was reported by superintendents of the Employment Service of Canada to be as follows:

There was no demand for farm help in the Province of Nova Scotia, but fair catches of fish were reported. Owing to the scarcity of snow, logging operations were quiet. A few farmers, however, were cutting pit timber in the vicinity of New Glasgow, while some of the small operators there were cutting pulpwood. Coal mines at Coalburn operated five days per week, those at Stellarton and Westville, four days and the Vale mine at Thorburn, three days. Elsewhere, conditions were more unfavourable, the majority of mines being open only one or two days per week. Manufacturers reported business somewhat slow after the Christmas rush, although bakeries, foundries and machine shops were fairly busy. Woodworking factories and saw mills were quiet and some idleness occurred in the iron and steel industries. Building construction in Halifax continued, with a number of mechanics and unskilled workers employed. Bridge and wharf extension was being carried on at New Glasgow. Sewer and other relief work was also provided in each of these cities. Transportation, both passenger and freight, was heavy during the holiday season. Trade for the most part, was good and at Halifax, in many cases, better than that of last year. There was an added call for charworkers for the preparation of homes for Christmas but the demand for and supply of domestics was fair only.

There were few orders listed for farm help in the Province of New Brunswick, and city markets were somewhat handicapped owing to a heavy fall of snow which rendered the roads impassable for the transportation of farm produce. No activity was reported in logging. Adverse weather conditions also seriously affected the fishing industry, nets and rigging along the Miramichi Bay being carried away by the ice. At Saint John, however, a good supply of cod, haddock and lobsters was landed, but halibut was scarce. Manufacturers of confectionery and foodstuffs were busy although extra hands were laid off after the Christmas rush. Woodworking plants were quiet. Other industries, including refineries, were working on short time. The pulp mill at Fraser having closed, with no orders for shipments of stock on hand, about sixty men

were laid off. Little building construction was under way, but relief work was being provided for the unemployed. Passenger and freight traffic over the railways was very heavy. Highway traffic, however, was entirely held up owing to heavy snow storms. Waterfront workers were fairly busy. Practically all retail stores reported an excellent Christmas business. Wholesale houses were somewhat quiet, with collections fair. There was the usual demand for domestic workers.

Due to seasonal conditions, few orders for farm help were received in the Province of Quebec. Logging showed some improvement at Amos, Rouyn and Sherbrooke, but elsewhere the situation remained quiet. No activity was reported in mining. Scarcity of orders from manufacturing concerns was in evidence. In Montreal, boot and shoe factories, textiles and clothing showed a decline. In Quebec City, factories were operating at only fifty per cent of their usual capacity. Three Rivers also registered a decline. Sherbrooke proved the only exception to the prevailing slackness, as several plants there were employing night shifts. The situation in building construction showed little improvement, Quebec City and Sherbrooke being the only cities to report operations in that line of activity. Cessation of paving and sewer work in Montreal again decreased the number of workers employed by that city, and outside of road construction as relief work, there was no activity to report in Three Rivers. During the holiday season the demand for domestics increased considerably and a number of placements was made.

Practically no demand for farm help existed in the Province of Ontario, although applicants were available who were willing to do this work. Logging remained inactive, with few if any, calls for men. While the mines were working to full capacity in most cases, very few men were being added to the staffs. Due to the holiday season, factories in many instances closed down for several days, but despite this slowing up of work, indications continued to point to some improvement. At Brantford, agricultural implement plants were still adding to their staffs and others were engaging old hands. Two new factories were opening in Woodstock. In St. Catharines some plants were busy, and more men were being taken on at Sarnia. Shoe factories and textile plants in London were a little busier, and news printing production at Fort William had received fresh impetus on the resumption

## MONTHLY STATISTICS REFLECTING INDUSTRIAL CONDITIONS IN CANADA

(Official Statistics except where noted)

(8) MacLean's Building Review.

of operations by the Abitibi Company. As far as the automobile industry was concerned, however, conditions did not show the improvement expected; thus Oshawa and Windsor were not so busy in this respect. Little or no activity was recorded in building construction apart from unemployment relief works of various kinds, chief of which were several highway projects well under way, including the Trans-Canada highway, the Dorset-Coboconk road, the continuation of King's Highway No. 7, from Madoc to Perth, as well as road work in the Muskoka and in the Rainy River Districts, all of which entailed the employment of some ten or twelve thousand men gathered from all sections of the Province. Conditions in the women's household section showed little change, the demand for domestics and casual workers remaining good, with a shortage of experienced housemaids and housekeepers with which to meet the continually growing demand for this class of help.

A number of men in the Province of Manitoba accepted employment under the Government Farm Relief Plan. Only a few log cutters were asked for, and there was no call for miners. Greater quietness prevailed in the building industry, and fewer men were also required as replacements on the relief assignments for highway construction and for Riding Mountain National Park. Merchants reported a fair trade in small purchases, though the volume was not up to that of previous years. Several wholesale lines were active and collections were fair. Due to the holiday season, there was a good demand at Winnipeg for day workers, but requirements for general domestic help were not so great.

Fewer farm hands were registered in the province of Saskatchewan and the orders listed, for the most part, were those reported under the Farm Relief scheme. Logging was quiet. There were no calls for building labourers and such positions as were offered were mostly of a casual nature. Relief camps were open and where men could not be sent to these, direct relief was supplied by the city. There was no difficulty in filling orders for day workers, and hotel and restaurant help in the women's domestic section, but there was a number of unfilled orders for domestics and housekeepers under the Government Relief scheme, and a few vacancies where board only was offered.

The demand for farm help in the province of Alberta was less than usual, with no difficulty experienced in filling orders where wages were offered. There was still a fair call for men in the logging industry, but although many contracts had been let, few men would

be required before the new year. Little activity was shown by the mines at Drumheller and Lethbridge and those which were open were running part time only. At Edmonton, however, the situation was brighter, as most mines were busy, with a fair demand for men. Manufacturing was slack, with no call for additional help. Quietness also prevailed in the building and construction group, relief work being the only kind available for general labour. Further reductions in staffs were also reported by the railroads. Wholesale trade was fair and retail trade showed improvement. Placements in the women's domestic section were somewhat higher but applicants were greatly in excess of vacancies.

There was no demand for farm help in the province of British Columbia. Little change was recorded in logging, with practically no movement of labour. Coal mines were running on short time and metal mining was quiet. Planing mills were engaged in cutting railway ties and several small lumber mills were sawing steadily, as were shingle mills, but other manufacturing industries showed no improvement. Unfavourable weather hampered construction work at Nanaimo, but at Nelson all local tradesmen were employed. A few residences were being built at Penticton and carpenters were busy on inside building repairs and bridge erection at Revelstoke. In localities where the usual work was not available, relief camps had been opened or the unemployed provided for in other ways. The drydock and shipyard at Prince Rupert was quiet, but longshoremen found extra work on a fish shipment from Ketchikan. At Vancouver there was sufficient employment to care for only a small portion of waterfront workers. Trade, though fairly good, was in most cases somewhat below that of last year. The women's domestic section was quiet, except for extra calls over the holiday for casual workers.

#### EMPLOYERS' REPORTS

The seasonal losses reported at the beginning of December, 1931, were on a smaller scale than on the same date in 1930, though they exceeded the average decline recorded during the last ten years. Statements were tabulated by the Dominion Bureau of Statistics from 7,813 firms employing 901,854 persons, compared with 937,494 in the preceding month; the index (average, 1926=100), stood at 99.1 compared with 103.0 on November, 1931, and with 108.5, 119.1, 116.7, 108.1, 102.3, 96.5, 91.9, 96.9, 96.3 and 88.3 on December 1, 1930, 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922, and 1921, respectively.

All provinces except Ontario registered curtailment, the largest recessions taking place in

the Prairie Provinces. In the Maritime Provinces, the seasonal reductions in employment occurred chiefly in construction, although mining and transportation were also slacker. On the other hand, manufacturing logging and trade showed improvement. In Quebec, construction reported declines, while important gains were indicated in manufacturing, logging, shipping and trade; most of the improvement in factory employment was due to the reopening of large railway car shops closed for some weeks. In Ontario, employment showed a moderate increase; retail trade and logging registered marked seasonal increases, and considerable improvement was shown in iron and steel and pulp and paper factories, while the extension of unemployment relief undertakings provided work on the highways for a large number of extra persons. Other branches of manufacturing, transportation and building and railway construction reported large losses. In the Prairie Provinces there was also a further reduction in employment; retail trade and coal mining were seasonally more active, and large gains were also noted in manufacturing, chiefly due to the reopening of railway car shops. Construction, transportation and communications, on the other hand, registered declines, the losses in highway construction being especially pronounced. In British Columbia, manufacturing was dull, as were construction and transportation. On the other hand, coal mining and logging recorded heightened activity.

Of the eight centres for which separate tabulations are made, Montreal and Windsor and the adjacent Border Cities showed improvement as compared with November, while lessened activity was reported in Quebec city, Toronto, Ottawa, Hamilton, Winnipeg and Vancouver. In Montreal, manufacturing showed heightened employment, largely due to the reopening of important railway car shops closed for some weeks, although tobacco and musical instrument factories also reported improvement; retail trade was seasonally active and employment increased about the port in preparation for the winter shutdown. On the other hand, construction registered considerable losses. In Quebec there was a decrease, chiefly in construction, transportation, and manufacturing, while trade showed seasonal improvement. In Toronto, retail trade recorded improvement and work on the roads and in printing establishments also increased, but textile, lumber and building material plants, transportation and building construction were slacker. In Ottawa, curtailment was indicated, chiefly in construction and manufacturing, while trade afforded more employment. In Hamilton, a decline was reported in

manufacturing and construction. In Windsor and the Adjacent Border Cities, there was an increase, mainly in iron and steel plants. In Winnipeg, a small reduction was reported in manufacturing, while other groups also showed only slight changes. In Vancouver, manufacturing, transportation and construction showed curtailment.

Contrary to the downward movement ordinarily shown in manufacturing on December 1 in the record of the past ten years, there was an increase in activity on the date under review; this was largely due to the reopening of important railway car shops closed down in September. Tobacco, non-ferrous metal, musical instrument and printing and publishing plants also recorded heightened activity. On the other hand, losses were reported in other manufacturing establishments. Logging and trade registered marked seasonal improvement, but mining, communications, transportation, services and construction and maintenance showed reductions, those in the last named being very extensive.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of December, 1931.

#### TRADE UNION REPORTS.

There was a further though nominal increase in the volume of unemployment reported at the close of November by the 1,819 local

trade unions from which returns were tabulated, with a membership aggregate of 189,031 persons. Of these 35,206 were without employment on the last day of the month, a percentage of 18.6, in contrast with 18.3 per cent of idleness in October. Important losses in activity, however, were shown from November last year when 13.8 per cent of the members reported were out of work. Some employment revival was indicated during November with the re-opening of the railway car shops which had remained closed, or practically so, since September, but this improvement was slightly more than offset by the recessions indicated in other trades which were chiefly of a seasonal nature. In Nova Scotia and Saskatchewan the most noteworthy falling off in activity from October was apparent, the coal mines of the former province employing fewer workers, while in Saskatchewan steam railway operation showed some curtailment, partly due to a drop in the grain movement. Minor contractions of employment were reflected among New Brunswick, Ontario, Manitoba and British Columbia unions. On the contrary, a favourable employment balance was noted in Quebec and Alberta, principally due to renewed activity in railway car shops during the month. Nova

Scotia, Manitoba and British Columbia unions all reported substantial employment recessions from November a year ago, practically all trades participating in this downward employment movement, while declines in activity of more moderate proportions were indicated in the remaining provinces.

Appearing on another page of this issue will be found a more detailed article, with tabular statements on unemployment among local trade unions at the close of November, 1931.

#### EMPLOYMENT OFFICE REPORTS.

During the month of November, 1931, the references of persons to employment made by the offices of the Employment Service of Canada numbered 45,042, while the placements effected totalled 43,326. Of the latter, the placements, in regular employment were 14,417 of men and 3,048 of women, a total of 17,465, while the placements in casual work were 25,861. Applications for work reported by the offices numbered 71,483, of which 60,467 were of men and 11,016 of women workers. Employers notified the Service during the month of 37,666 vacancies for men and 6,447 for women, at total of 44,113. A decline is recorded in all transactions when the figures are compared with those of the preceding month, but a marked gain is registered over those recorded during the corresponding period a year ago, the reports for October, 1931, showing 56,901 vacancies offered, 85,685 applications made, and 55,789 placements effected, while in November, 1930, there were recorded 36,503 vacancies, 68,862 applications for work, and 35,557 placements in regular and casual employment. A report in detail of the work of the offices for the month of November, 1931, may be found elsewhere in this issue.

#### BUILDING PERMITS AND CONTRACTS AWARDED.

According to a report prepared by the Dominion Bureau of Statistics, the value of permits issued in 61 cities in Canada during November, 1931, was \$7,992,815 as compared with \$8,713,402 in the preceding month, and with \$11,821,292 in November, 1930.

The *MacLean Building Review* states that the total value of contracts awarded for construction in Canada during 1931, as compiled by MacLean Building Reports, Limited, amounted to \$315,482,000. This is a decrease of 30.9 per cent from the 1930 total of \$456,999,600. Ontario led all the provinces with \$125,452,300, or 39.8 per cent of the Dominion total; Quebec was second with \$106,125,700, or 33.6 per cent. The decline for Ontario was 28.5 per cent, and for Quebec 31.4 per

cent from the 1930 figures. The largest declines were in the Prairie Provinces and the smallest in British Columbia, Nova Scotia and New Brunswick.

The value of construction awards throughout the Dominion during December is estimated at \$11,257,300. Of this total, \$4,338,000 was for engineering purposes; \$3,708,900 was for residential buildings; \$2,628,000 was for business buildings; \$1,430,000 was for sewers and water mains; and \$582,400 was for industrial purposes. The apportionment of the contracts awarded during December by provinces was as follows: Ontario, \$4,223,400; Quebec, \$3,969,700; British Columbia, \$1,095,700; Alberta, \$726,500; Manitoba, \$564,900; New Brunswick, \$429,500; Nova Scotia, \$180,600; Saskatchewan, \$54,000; Prince Edward Island, \$13,000.

#### Production and Trade

Figures showing the volume of production in certain industries during recent months and also in the corresponding months last year are shown in the table on page 9.

The *Monthly Review of Business Statistics*, published by the Dominion Bureau of Statistics, in a review of the business situation in Canada during 1931, says "One of the chief reactionary factors influencing the social economy of Canada in the current period is the reduction in the purchasing power of the farmer. This has been caused by the moderate crop yields of the last three years and the very low prices obtained for agricultural products. An index of crop production, expressed as a percentage of the average from 1915 to 1924 equalling 100, stood at 89.7 in 1931 compared with 114.3 in 1930 and 91.6 in 1929. The output in 1931 was less than in any year since 1919 notwithstanding the considerable expansion in the acreage devoted to the sixteen principal field crops in question. . . .

"An excellent barometer of activity in the group engaged in the production of plant and equipment is the output of iron and steel. The uses of iron and steel are fairly general in the production and renewal of railway and industrial equipment, explaining the strategic position occupied by the industry in reflecting cyclical fluctuations. For the eleven months ended November last, the cumulative production of pig iron in Canada was 406,176 long tons as against 708,155 tons and 1,007,612 tons made during the same months of 1930 and 1929 respectively. For the eleven months ended November 30, 1931, the cumulative production of steel amounted to 652,118 tons

as against 948,022 tons during the same period of 1930 and 1,297,273 tons in the first eleven months of 1929. In appraising the significance of this curtailment, it should be realized that in 1929 the industry, primarily engaged in the production of capital equipment, was more actively employed than in any other peacetime period. . . .

"There are many factors which have promoted the development of Canada into a manufacturing country, and cheap hydro-electric power has played a very important part in not only the purely manufacturing phase of this growth but also in the development of other resources in which Canada is so richly endowed. It has also made possible the establishment of many industries which are dependent on large quantities of low-priced power for successful operation. The total development of 6,125,012 horse-power was exceeded only by one other country, viz., the United States with 14,885,000 horse-power for 1930, but on a per capita basis Canada has an average of 0.62 horse-power as against 0.12 horse-power in the United States. Norway with a higher average installation of 0.67 horse-power per capita had a smaller total development than Canada. . . . During the past year, turbines with a total capacity of over 400,000 horse-power have been completed and put into operation and at present plants with a combined capacity of 1,500,000 horse-power are under construction. . . .

"Owing to the extreme fluctuation in the industries engaged in the production of plant and equipment, the part played by such industries in the causation of the business cycle may very well be over-emphasized. Close analysis discloses that the industries producing consumption goods are normally the first to recover after a depression, and it is to such industries that the economist must look, at the present stage for an indication of possible developments. It is only after the consumption goods industries have expanded to the point of maximum capacity attained during the preceding period of superactivity, that the pronounced expansion of the instrumental industries occurs.

"The boot and shoe industry furnishes an example of revival in 1931 after reaching a low level of operations in the preceding year. The depressed conditions of 1930 resulted in a considerable decline in the available supply of leather footwear. The Canadian public either postponed purchases or retail stocks were depleted appreciably. The replacement demand resulting from the postponement, led to a more active production during the year under review. If this development were dupli-

cated in a wide variety of industries engaged in the production of goods for direct consumption the hopes which are entertained in some quarters, as to the early termination of the depression would be entirely justified. The production of leather footwear during the ten months ended October 31, 1931, amounted to 15,286,000 pairs, compared with a total of 14,898,000 pairs in the corresponding period of 1930. The relatively greater activity of the textile industry is indicated by the increased imports of raw cotton and raw wool required for further manufacture in Canada. Imports of raw cotton in the first nine months of 1931 were 60,335,000 pounds compared with 59,639,000 pounds in the same period of 1930. Raw wool imported by the woollen manufacturers of Canada amounted to 9,687,000 pounds in the first nine months of 1931 compared with 7,289,000 pounds in the same period of the preceding year, a gain of about 33 per cent. The larger purchases of raw material for textile mills and factories indicate preparations for a higher rate of operations in some of Canada's important industries.

"Many firms have taken advantage of the opportunity presented during the last two years in reconditioning their plants leading to possibilities of efficient operation. With the advent of more prosperous times Canadian industry is ready to make greater record of achievement than ever before."

*Coal.*—Canadian mines produced 1,263,087 tons of coal in November, a decline of 22.96 per cent from the average for the month during the past five years of 1,639,441 tons. November's output included 712,224 tons of bituminous coal, 503,054 tons of lignite coal, and 47,809 tons of sub-bituminous coal. Nova Scotia produced 363,577 tons, New Brunswick, 13,471 tons, Saskatchewan, 123,652 tons, Alberta 589,917 tons, and British Columbia, 173,470 tons. Imports of coal, into Canada reached a total of 1,414,082 tons as compared with the 1926-1930 average for November of 1,739,337 tons. Receipts of anthracite totalled 303,956 tons and consisted of 213,750 tons from the United States, 85,614 tons from Great Britain, and 4,592 tons from the French East Indies. Importations of bituminous coal included 1,095,040 tons from the United States and 14,526 tons from Great Britain. In addition to these imports, 560 tons of United States lignite were cleared through British Columbia ports.

A decline of 75.3 per cent was recorded in the exports of Canadian coal in November when external shipments amounted to 21,922 tons as against the November 1926-1930 average of 88,907 tons. The United States, New-

foundland, Argentina, Australia, St. Pierre and Norway provided the principal market for the November exportations. Canada's coal supply in November amounted to 2,655,247 tons, a falling-off of 19.3 per cent from the 1926-1930 average for the month of 3,289,871 tons. The current month's available supply included 303,956 tons of anthracite coal, 1,802,439 tons of bituminous coal, 47,809 tons of sub-bituminous coal, and 501,043 tons of lignite coal. The United States supplied 49.31 per cent of the coal made available for consumption during the month, Canada 46.75 per cent, Great Britain 3.77 per cent, and the French East Indies 0.17 per cent.

#### EXTERNAL TRADE

A summary of Canadian Trade prepared by the Department of National Revenue shows that in November, 1931, the merchandise entered for consumption amounted to \$46,911,012 as compared with \$45,932,572 in the preceding month and with \$76,325,063 in November, 1930. The chief imports in November, 1931, were: Non-metallic minerals and products, \$9,626,183; Agricultural and vegetable products, mainly foods, \$8,089,325; Fibres, textiles and textile products, \$5,985,139.

The merchandise exported during November, 1931, amounted to \$57,486,950 as compared with \$55,537,917 in the preceding month, and with \$73,060,871 in November, 1930. The chief exports in November, 1931, were: Agricultural and vegetable products, mainly foods, \$24,653,671; Wood, wood products and paper, \$14,837,538; Animals and animal products, \$5,871,489.

#### Strikes and Lockouts

The time loss due to industrial disputes in December, 1931, showed a substantial decline from the preceding month, a similar decline appearing in the number of workers involved, owing largely to the cessation toward the end of November of two strikes of sawmill workers on the Pacific Coast which had involved approximately one thousand workers during that month. In comparison with the figures for December, 1930, almost twice as many strikes and lockouts were recorded, a corresponding increase appearing in the number of workers involved and the time loss incurred. There were in existence during the month fourteen disputes, involving 1,268 workers, and resulting in a time loss of 14,927 working days, as compared with eleven disputes, involving 1,660 workers, and resulting in a time loss of 22,489 working days in November. In December, 1930, there were on record eight disputes, involving 723 workers, and resulting in a time loss of 8,661 working days. At the end of the

month there were on record six disputes, involving approximately 475 workers. These figures do not include those strikes and lockouts in which employment conditions were no longer affected but which had not been formally called off by the union.

#### Prices

The average cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in sixty-nine cities was little changed at the beginning of December at \$7.85, as compared with \$7.82 for November; \$10.10 for December, 1930; \$11.83 for December, 1929; \$11.31 for December, 1928; \$11.17 for December, 1927; \$11.18 for December, 1926; \$11.56 for December, 1925; \$10.58 for December, 1924; \$10.73 for December, 1923; \$10.39 for December, 1922; \$11 for December, 1921; \$14.84 for December, 1920; \$16.92 for June, 1920 (the peak); \$13.65 for December, 1918; and \$7.96 for December, 1914. The advance was due mainly to a seasonal rise in the price of eggs, although the prices of milk, butter, flour and rolled oats were also slightly higher. The prices of beef, veal, mutton, fresh and salt pork, bacon, bread, beans and prunes were lower. Including the cost of fuel and rent with that of foods, the total budget averaged \$17.76 at the beginning of December as compared with \$17.81 for November; \$20.46 for December, 1930; \$22.11 for December, 1929; \$21.56 for December, 1928; \$21.37 for December, 1927; \$21.40 for December, 1926; \$21.87 for December, 1925; \$20.90 for December, 1924; \$21.21 for December, 1923; \$20.97 for December, 1922; \$21.49 for December, 1921; \$25.67 for December, 1920; \$26.92 for July, 1920 (the peak); \$21.64 for December, 1918; and \$14.26 for December, 1914. In fuel, anthracite coal was slightly higher while wood and coal oil were down in the average. Rent was down somewhat, lower quotations having been reported from several cities in Ontario.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics based upon prices in 1926 as 100 was slightly lower for December at 70.3 as compared with 70.6 for November; 77.7 for December, 1930; 96.0 for December, 1929; 94.6 for December, 1928; 97.2 for December, 1927; and 97.9 for December, 1926. In the classification according to chief component materials two of the eight main groups were lower and six were higher. The Vegetables and Vegetable Products group and the Animals and their Products group declined, the former due to lower prices for wheat, oats, rye, barley, flax and flour, which more than offset higher prices for bran, shorts, hay and potatoes, and the latter due to lower

prices for hides, hogs, lambs, cured meats and eggs, which more than offset higher prices for steers, calves and butter. The groups which advanced were: the Fibres, Textiles and Textile Products group, owing mainly to higher quotations for raw cotton and raw silk; the Wood, Wood Products and Paper group, because of higher prices for spruce lumber and pulp; the Iron and its Products group, because of advanced quotations for hot rolled and an-

nealed steel sheets, steel tank plates and automobile body plates; the Non-Ferrous Metals and their Products group, mainly because of higher quotations for electrolytic copper, copper sheets, copper wire bars, lead and zinc; the Non-Metallic Minerals and their Products group, due to higher prices for coal and kerosene; and the Chemicals and Allied Products group, mainly because of higher quotations for dyeing and tanning materials.

## RECENT PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

**D**URING the month of December the Department received the report of a Board of Conciliation and Investigation established under the provisions of the Industrial Disputes Investigation Act to inquire into a dispute affecting the Winnipeg Electric Company and certain of its employees, being motormen, conductors, busmen, mechanical department employees, trackmen and gas work employees, members of the Street Railway Employees' Units of the One Big Union.

### Applications Received

The Quebec Railway, Light and Power Company on December 9 submitted two applications for the establishment of Boards of Conciliation and Investigation as follows: (1) Relating to a dispute with its telegraphers, members of Quebec Division No. 115 of the Order of Railroad Telegraphers. Sixteen employees were stated to be directly affected by this dispute, which arose in connection with a proposed wage reduction averaging 7 per cent and a revision of working conditions to take effect on December 1, 1931. (2) Relating to a dispute with its maintenance-of-way employees, being members of the United Brotherhood of Maintenance-of-Way Employees. This dispute also was caused by the company's proposal to put into effect on December 1 a revision of rates of pay and working conditions, the proposed reduction in wages being 2 cents per hour, or approximately 5 per cent. The number of employees stated to be directly affected was 27. Messrs. M. S. Campbell and E. McG. Quirk, Conciliation Officers of the Department, conferred with the management of the company and with representatives of the employees concerned and, as a result of their mediation, a settlement was effected in each case.

An application was received at the close of December from certain employees of the Winnipeg Electric Company, being members of

Locals Nos. 1037 and 435 of the International Brotherhood of Electrical Workers. The cause of the dispute was stated to be a wage reduction of 10 per cent proposed by the company, the employees directly affected, 67 in number, being foremen, linemen, cablemen, station maintenance wiremen, metermen, lamp trimmers, troublemen, and helpers for each of the above classes.

### Other Proceedings under the Act

A Board of Conciliation and Investigation was established on December 28 to deal with a dispute between the Canadian Pacific Railway Company and its clerks, freight handlers and station employees and various subsidiary groups, namely, freight handlers, West St. John; sub-foremen and freight checkers, West St. John; gang foremen, checkers, coopers, sealers and porters, Montreal wharf; shop clerks, Angus; stores department employees; pursers and freight clerks, B.C. lake and river steamers; freight shed and baggage room staffs, Victoria, B.C., Coast Steamship Service; freight shed and baggage room staffs, Esquimalt and Nanaimo Railway; waterfront freight handlers, Vancouver; stores employees, B.C. Coast Service, Victoria, B.C. The dispute related to a 10 per cent wage reduction proposed by the company, 5,000 employees being directly affected. The application in this matter was received from the company during November. Shortly afterwards the employees entered a protest with respect to the inclusion in the application of certain groups of employees stated to be covered by separate agreements and whose wages had not yet been made the subject of discussion with the railways. This point was taken up by the Department with the representatives of the employing company and of the employees concerned, between whom a conference was arranged, in which Messrs. M. S. Campbell and E. McG. Quirk, Conciliation Officers of the Department of

Labour, participated. As a result of the discussion the employees withdrew their protest with respect to the form of the company's application. The board members appointed on the nomination of the company and employees respectively were Mr. Errol M. McDougall, K.C., and Professor J. T. Culliton, both of Montreal. A chairman had not been named at the time of going to press.

The December issue of the *LABOUR GAZETTE* contained at page 1293 the text of the report of the Board of Conciliation and Investigation which dealt with a dispute between the Canadian National Railways and Canadian Pacific Railway and subsidiary railways on the one hand, and their locomotive engineers, locomotive firemen and hostlers, conductors, trainmen and yardmen, and telegraphers, assistant agents and linemen, on the other hand. The board recommended a 10 per cent reduction in the basic rates of pay of the employees concerned to be put into effect as from November 15, 1931. Dr. Hemmeon, the board member nominated by the employees, dissented from this recommendation. The board's findings were accepted by the employing companies, who stated that they were prepared to negotiate with the representatives of the classes of employees mentioned, looking to the revision of the existing agreements in accordance with the board's recommendation. Pending such discussion the railways put the 10 per cent wage reduction into effect, retroactive to November 15. On December 3 the employees wrote the Department protesting against the retroactive feature of the wage cut, claiming such action to be in violation of section 58 of the Industrial Disputes Investigation Act, and requesting an opinion on this point. Also the employees on December 12 served a notice on the railways with respect to wages earned subsequent to November 15, stating that payment on the basis of the board's award would be received and accepted by the employees only on account and as a partial payment.

The employees' protest was referred for consideration to the Department of Justice, which expressed the following opinion on the point raised:—

Referring to your letter of the 8th instant and the conversations which you have had with officers of this Department with regard to the further dispute which has arisen between the railways and certain classes of their employees over the recommendation of the Board of Conciliation to the effect that wage reductions should take effect from November 15, I have given this matter very careful consideration and have noted the arguments of both sides which you have submitted.

Section 58 of the Industrial Disputes Investigation Act provides that no change shall be made in the conditions of employment with respect to wages or hours until a board has dealt with the matter and a copy of its report has been delivered to the parties affected.

Section 27 provides that the board may make a recommendation as to the date from which the proposed change in conditions should commence.

It is a fundamental rule of English law that the provisions of a statute should not be construed so as to have a retroactive operation unless its language is such as to plainly require such a construction. In interpreting statutes the general scope and purview of an Act must be kept in mind and it seems to me that there is no doubt that the Act governing this matter was enacted as a conciliatory measure in an endeavour to minimize the danger of industrial unrest in the country. Parliament evidently considered that the public interest required the enactment of section 58 and no doubt they had in mind the general rule that every enactment is to be construed as prospective unless it is necessary to the operation of the Act that retrospective effect be given to it. Furthermore if an enactment is expressed in language which is fairly capable of either interpretation it ought to be construed as prospective only.

Section 27 of the Act can be given its full effect by construing it prospectively, and I do not think that the section clearly indicates that Parliament intended that a board should interfere with vested rights so as to deprive the men of any rights which they had prior to a decision or finding of a board.

At the close of the month direct negotiations had been entered into between representatives of the railways and of the various classes of employees concerned looking to an amicable settlement.

### **Report of Board in Dispute Between Winnipeg Electric Company and Motormen, Conductors, Busmen, Mechanical Department Employees, Trackmen and Gas Work Employees**

The Board of Conciliation and Investigation established on October 24 to deal with a dispute between the Winnipeg Electric Company and certain of its employees, being motormen, conductors, busmen, mechanical department employees, trackmen and gas work employees, members of the Street Railway Employees' Units of the One Big Union, presented its re-

port to the Minister of Labour during December. The dispute arose in connection with notification received by the Employees' Committee from the company on September 30 of a 10 per cent wage reduction which the company purposed putting into effect as from November 1. The number of employees directly affected was stated to be 775, and indirectly

325. The personnel of the board was as follows: Mr. W. J. Christie, of Winnipeg, chairman, appointed by the Minister in the absence of a joint recommendation from the other members of the board, Messrs. Ernest T. Leech, K.C., and R. B. Russell, both of Winnipeg, nominees of the company and employees, respectively.

After the board had been functioning for some days a protest was received in the Department from the employees claiming that section 58 of the Industrial Disputes Investigation Act, which provides that the relations of the parties are to remain unchanged pending proceedings before a board, had been violated by the company, which had put the winter schedule into effect and thereby increased the working hours from seven to eight per day. Inquiry showed the seven-hour day in effect at the time to be a temporary arrangement to which the company agreed at the men's request in order to insure employment for a number of men who otherwise would have been laid off when the summer schedule had been put into operation. Inasmuch as the subject matter before the board related to wages only, and the change made in the working hours was merely a reversion to normal conditions, the Department's view, which was supported by the Department of Justice, was that the changed condition of employment was not of a character contrary to the spirit of the statute.

A few days later the Department received telegrams from Mr. A. Hume, Secretary of the committee representing the employees, and from Mr. R. B. Russell, the men's nominee on the board, protesting the eligibility of the chairman, claiming that he had a direct pecuniary interest in the matter in dispute through being a shareholder of the company and that he was therefore disqualified to act as board member. On this point the chairman submitted a statutory declaration indicating that, while he acted as a joint trustee in regard to certain shares of stock in the Winnipeg Electric Company owned by a person resident in England, he personally did not then own and never had owned any shares or bonds in the company. The situation was carefully considered and Messrs. Hume and Russell were notified that the departmental view was that the chairman was not disqualified as having a direct pecuniary interest in the issue of the dispute.

On December 3 a further telegram was received from Mr. Russell, claiming that the two other board members had signed and despatched the board report without his knowing its contents and being supplied with a copy of the same. On this point the chair-

man has placed on record in the Department a statement indicating that the report was discussed on December 3 by the board with all members present and that Mr. Russell refused to sign the board's award. At this meeting the three members agreed that there was no necessity for having any further board meetings, and the chairman told Mr. Russell that he would forward him a copy of the report during the following morning in order that he would have the report before him when drafting his minority report. The report was accordingly mailed to the Department, and subsequently that evening Mr. Russell requested another board meeting, which was held on the morning of the 4th. A copy of the report was submitted to Mr. Russell for signature, which, if he would sign it, would take the place of the report already forwarded to the Department. Mr. Russell, however, again refused to sign the report.

The report of the board, which was signed by the chairman and Mr. Leech, the member nominated by the Winnipeg Electric Company, upheld the company's request for a 10 per cent wage cut. Mr. Russell submitted a minority report dissenting from the board's findings. The company indicated its willingness to accept the board's award, which was, however, rejected by the employees, and direct negotiations looking to a settlement were under way at the close of the month.

The texts of the majority and minority reports are given below.

### Report of Board

300 Paris Bldg.,

Winnipeg, Man., December 3, 1931.

Hon. Minister of Labour,  
Ottawa, Ontario,  
Canada.

DEAR SIR,—A Board of Conciliation was appointed under the Industrial Disputes Investigation Act, 1907, c. 20, s. 1, to deal with a dispute between the Winnipeg Electric Company and certain of its employees. The personnel of the Board is:

Mr. Robert Boyd Russell, representing the employees.

Mr. Ernest T. Leech, K.C., representing the company.

Mr. William John Christie, Chairman, appointed by the Minister of Labour.

The Company notified certain of its employees that their wages would be reduced 10 per cent to take effect on the 1st of November, 1931.

The first meeting of the Board of Conciliation was held on the 5th of November, 1931, and the Board held a total of fourteen

meetings. There was a total of thirty-nine exhibits submitted for the consideration of the Board, as well as verbal explanations to a number of the exhibits.

A notice was posted on the different boards used for this purpose that salaries of executives and other employees receiving \$3,000 or more per annum, and also the fees of Directors, were reduced 10 per cent from the 1st of October, 1931, and at the same time notice was given to all other employees of the Company that in view of economic conditions, and the continued serious decline in the revenues of the various utilities, effective November 1, 1931, wages and salaries of all employees and officials, not already dealt with, would likewise be reduced 10 per cent until further notice. The notice also contained the following explanatory paragraph:—

"Although the cost of living has declined to an extent which will compensate for this reduction, this step is nevertheless taken reluctantly, and only after the Company had exhausted every other means of making revenue meet expenses, including application to the authorities for relief from taxation, etc."

In addition to this notice being posted on the various bulletin boards where it could be seen by the employees themselves, a similar notice was sent to Mr. Alexander Hume, as Secretary of the Committee representing three groups of railway utility employees, viz:—

1. Motormen, conductors and busmen.
2. Mechanical Department employees.
3. Track Department employees.

Notice was also sent to representatives of the gas and other departments.

Subsequently there were two meetings held with the representatives of the Company and the employees. The first of these meetings was held October 9, 1931, and the second meeting was held on October 13, 1931. After these meetings the employees asked for a Board of Conciliation which resulted in this Board being appointed.

Exhibit No. 2 given by the Company shows that the gross earnings for the year ending September 30, 1931, were \$3,201,890. Of this amount \$1,603,140 was expended for wages and salaries, and after providing for other expenses such as material, insurance, taxes, injury damages, etc., there remained \$151,234 to pay interest on bonds which amounted to \$337,095, which left a deficit of \$185,861. There was also the railway's proportion of dividends on Preferred Stock which amounted to \$132,650. After adding this it left a deficit of \$318,511. There is, in addition to this, the Common Stockholders whom the Company claim, and which the Board find to be correct, have invested large amounts in the

railroad property, and who have for some time received no dividends.

The Company showed in Exhibit No. 5 that their passenger revenue has decreased monthly comparing the months in 1929 to 1930, and there is also a comparative monthly decrease from 1930 to October, 1931.

The Company claim that they have been able to make a considerable saving by altering cars so that they can operate one man cars instead of two man cars, but they have increased the wages of men operating one man cars, 05½ cents an hour. This was started some years ago.

Exhibits were shown as to the difference in the cost of living from 1929 compared to the 1st of November, 1931, and the difference shown is 20.8 per cent less in 1931. This was accepted by both parties. It was claimed by the Company that considering the decrease of 20 per cent in the cost of living, the employees can keep up the same standard of living as they did in 1929, and after deducting their living expenses from their wages, can show a better earning capacity with a reduction of 10 per cent in wages in November, 1931, than they could with the increased cost of living, 20.8 per cent, that they had to pay in November, 1929.

It was understood that the Company had the privilege of only employing at different times of the year the number of men they actually require, and any decrease made was taken from the junior employees. The claim put in by the employees was that in the spring of 1930 the Company made a decrease in the number of their employees, and that the men asked the Company if the senior men could temporarily work on a seven hour day, and this would give the men that they could not accommodate with work a chance to keep employed until such time as the Company would be in a position to increase the number of its employees.

Exhibit No. 1 gives the following wages per hour for motormen, conductors, and busmen:—

	Daily except Sunday		Sundays only	
	One-man car operators and busmen	Two-man car operators	One-man car operators and busmen	Two-man car operators
	cents per hour	cents per hour	cents per hour	cents per hour
First 6 months...	55½	50	60½	55
Second 6 months...	58½	53	63½	58
Second year.....	62½	57	67½	62
Third year and thereafter.....	65½	60	70½	65

The following are the wages paid the trackmen on and before the 31st day of October, 1931:—

	cents per hour
Leading trackmen.....	65
assistants.....	50
Electric welders.....	70
assistants.....	55
Acetylene welders.....	65
assistants.....	50
Electric switch and diamond repairmen, handy- men and emergency men.....	55
Grinder men.....	55
assistants.....	50
Flat car motormen.....	55
apprentices or part time.....	50
Compressor men.....	50
Derrick men.....	50
Ordinary labourers, first 4 months.....	35
After probationary period of 4 months to end of first year.....	38
Second year.....	40
Third year and thereafter except as hereinafter provided.....	42
Labourers with 60 months or more service in the track department.....	45

Exhibit No. 30 shows the wages paid the gas employees on and before the 31st day of October, 1931:—

	cents per hour
Heaters.....	64
Producer operators.....	64
Pusher operators.....	64
Door lifter operators.....	62
Quenching car operators.....	62
Handy man, pipe fitter, tinsmith.....	60
Yard men, coke wheelers and labour employed in coal cars and purifying house or any part of the gas works.....	45
Boiler washer.....	54
Boilermen.....	55

Exhibit No. 8 shows the wages paid from the year 1916 to the year 1931. In the year 1916 the wages paid for a junior man working the first six months were 25 cents an hour, and in 1931 the wages are 50 cents an hour for the same junior class. For a man who had been working for three years in 1916 the wages were 34 cents an hour and for a man who has been working three years in 1931, the wages are 60 cents an hour for men operating two man cars.

The company claim that the increase in wages from time to time was caused by the employees making application for increases on account of the higher cost of living during different periods between 1916 and 1931, and the advances were generally made on that account.

The employees claim that by only working a seven hour day from last spring up to the present time, and at the same wages per hour as they were receiving for an eight hour day, the senior employees made sacrifices in order to make work for more men, and they claim that this should be taken into consideration by the Board. While the Board appreciates the generosity of the senior men, at the same time the company had to pay the same price for the work done as if fewer men did it in eight hour shifts.

The company claim that this depression that started some time ago has been increasing

from week to week, has very materially reduced the earnings of the railroad, and with the losses that they are making, they find that it is practically impossible to finance to make up these losses.

The Board heard the evidence given by the representatives of the motormen, conductors, busmen, mechanical and track department, as well as the gas department, all of whom thought that the scale of wages should not be reduced.

The statement submitted by the company in connection with the gas department showed that after paying all wages, expenses, depreciation, and interest on bonds, they made a small loss, but the percentage of loss compared with the investment, was not nearly as great as the Street Railway Department loss.

It is estimated that there are 10,000 people out of employment in Winnipeg at the present time, and in addition to this there are a large number working a reduced number of days in the month, and this number do not require to use the street cars to go to and from their work. Without counting on the number working on reduced days in the month, if you estimate that 60 per cent of the 10,000 unemployed do not ride daily on the street cars, this would be a loss in the fares of 6,000 passengers daily, at say 14.2 cents a day for each passenger going to and from his work once a day, which would be a loss of \$852 a day less the cost of handling that many passengers, which would be very small.

The majority of the Board have carefully considered the position of the employees of the company having their wages reduced 10 per cent, and they believe that the men would not be in any worse financial position by taking the 10 per cent reduction in wages than they were in 1929 when the cost of living was 20 per cent higher than it is in 1931.

For example we will take the position of the senior employee receiving 65½ cents an hour for an eight hour day's work. This would give him an earning of \$5.24 a day, and if he works 26 days a month, it would show that he had a monthly income of \$136.24, and if he spent all of this \$136.24 on living he would not save anything, but with the reduction of 20 per cent in the cost of living, he could live at the same standard of living for \$109 a month as he could at \$136.24 a month in 1929, and if his salary was reduced 10 per cent, it would give him a monthly earning of \$122.62, which would show that he could save \$13.62 a month in November, 1931, compared with saving nothing in 1929, or if he was receiving \$136.24 a month, and was living at \$100 a month, this would show a saving of \$36.24, and if his living expenses were 20 per cent less he could

live at \$80 a month on the same standard of living as cost him \$100 a month in 1929, and with his salary reduced 10 per cent to \$122.62, this would show that he would make a net saving of \$42.62 a month.

The majority of the Board have taken into consideration the position of the bond holders and preferred stock holders of the Winnipeg Electric Company. A number of these are people who have part or all their life savings invested in these bonds and preferred stocks, and they believe that these people should be protected as well as the employees, and by reading the above you see that the employees show a larger net earning increase in 1931 compared to their net earnings in 1929, after taking a wage reduction of 10 per cent, and making allowance for the decreased cost of living in 1931.

The decision of the majority of the Board is that a 10 per cent cut in the wages of the employees be made as requested in the notice given by the company to the employees, this reduction to date from the 1st of December, 1931. The length of time for this decrease of 10 per cent to continue may depend upon the cost of living in the future, whether it increases or decreases, as well as the future net earnings of the company, which appeals to us as a reasonable future adjustment.

In the evidence taken before the Board, complaints were made by the company and employees of the very unfair competition of taxi cab companies who employ drivers to work very long hours at a remuneration of 13 cents to 15 cents an hour, and by having men work at that low wage it gives the owners of the taxi cabs an opportunity of cutting fares to compete with the Winnipeg Electric Company, and, therefore, deprives the company of a lot of passenger traffic that otherwise would go to them. These taxi cab companies do not pay for the upkeep of the roads, the removal of snow from the tracks, or pay the taxes that the Winnipeg Electric Company have to pay on their gross earnings, and in stormy weather when the railroads have to clear the roadways, the taxi cabs use the cleaned streets for carrying passengers. This unfair competition has a direct bearing on the question before the Board, and if allowed to continue will have a very prejudicial effect upon the earnings of the company. The details of this are fully given in the report of the Municipal and Public Utilities Board of Manitoba dated July 10th, 1931. The Board would appreciate the City Council investigating and rectifying this unfair competition with the Winnipeg Electric Company.

There were exhibits placed before the Board as to the question of the taxes paid by the

Company, as well as the cost of the construction of certain portions of the roads, and the cost of clearing snow. These amount to a total of \$406,078, which is nearly 13 per cent of the gross revenue of the Company. This appears to the Board to be a very heavy tax, and they would appreciate the City Council taking this matter up to see if any relief could be given to the Company by way of tax reduction.

During the taking of the evidence and the investigating into the matter in dispute, the Board appreciate the very friendly feelings that existed between the Company and its employees. Mr. R. B. Russell, one of the members of the Board, does not agree to the findings of the majority of the Board, and his report will probably follow.

All of which is respectfully submitted.

(Sgd.) W. J. CHRISTIE,  
*Chairman.*

(Sgd.) ERNEST F. LEECH,  
*Member of the Board.*

### Minority Report

*In the matter of the Industrial Disputes Investigation Act and of a Dispute between the Winnipeg Electric Company and its Employees, being Motormen, Conductors, and Busmen, Mechanical Department, Track Department, and Gas Works Department Employees, members of the Street Railway Employees' Units of the One Big Union.*

To the Honourable the Minister of Labour,  
Ottawa.

SIR,—In presenting my report as the representative of the Employees in the above dispute, it will be necessary for me to first of all record my objection and protest at the unfair and, to my mind, unlawful actions of the other two members of the Board in signing and forwarding to you a report containing misstatements of facts, which report was signed and despatched without me knowing its contents and without me being supplied with a copy upon which I could prepare and forward my report in the event of my being in disagreement with same, and which report was signed and despatched in violation of Section forty-nine of the Act.

In order that the grounds upon which I register my protest may be fully understood it is necessary to recite the following facts:

At the private sitting of the Board held Tuesday, December 1, at which all three members were present, when it became apparent that all efforts to bring about a settlement through conciliation had failed, the Board

members then discussed the possibility of bringing in an unanimous report, and after a lengthy discussion of the entire situation it was finally agreed that the Chairman would draft a report to be presented at the next meeting for the endorsement or otherwise of the Board members. This next meeting, it was arranged, would be held Thursday, December 3.

When the Board met on Thursday, December 3, with all three members of the Board in attendance, the Chairman, Mr. Christie, reported he had been served by the Employees with a formal protest contesting his eligibility to act as Chairman, which protest read as follows:—

Room 10, Jordan Block,  
305 Fort Street,  
Winnipeg, Man.  
December 2, 1931.

*In the Matter of the Industrial Disputes Act and in the Matter of the Street Railway Employees' Units, embracing the Motormen, Conductors, and Busmen, Mechanical Department, Track Department, and Gas Department, and the Winnipeg Electric Company.*

To the Chairman and Members of the Board:

Whereas in the process of the hearing of the above dispute before you the Employees found that the spirit and letter of the Industrial Disputes Act *re* Section Fifty-eight, wherein it provides that the relation of the parties will remain unchanged pending the proceedings before the Board, was violated by the Company;

And whereas the attitude of the Chairman regarding this violation gave the Employees cause for serious anxiety and suspicion;

And whereas on investigation it was found that the Chairman of the Board was not qualified to act owing to his having a direct interest in the matter in dispute, as provided in Section Twelve of the Act, through being a shareholder of the Company;

And whereas we have searched the list of Winnipeg Electric Company shareholders kept by the Registrar in the Parliament Buildings, Winnipeg, as provided for by the Companies' Act, and found the Chairman, W. J. Christie, being the owner of preferred stock;

We hereby record our formal protest against the constitution of the Board in so far as the Chairman, Mr. W. J. Christie, is concerned.

Dated at Winnipeg this 2nd day of December, A.D. 1931.

(Sgd.) ED ARMSTRONG,  
A. HUME.

The Chairman, Mr. Christie, also reported that the Company officials had that day given him a copy of the telegram the Employees had forwarded to the Minister of Labour, wherein they challenged the Chairman's qualifications to act, and wherein they called upon the Minister of Labour to declare the chairmanship of the Board vacant, and further called upon the Minister to pro-

ceed to fill the vacancy as provided in the Act. This telegram read as follows:—

December 2, 1931.

Hon. G. D. ROBERTSON,  
Minister of Labour,  
Ottawa.

*Re Industrial Disputes Board dealing with the dispute between Winnipeg Electric Company and the Employees being Motormen, Conductors, Busmen, Mechanical Department, Track Department, Gas Works Department, stop. The following protest has to-day been served by the Employees to the members of the Board stop.*

Whereas in the process of the hearing of the above dispute before you the Employees found that the spirit and letter of the Industrial Disputes Act *re* Section Fifty-Eight, wherein it provides that the relation of the parties will remain unchanged pending the proceedings before the Board, was violated by the Company stop.

And whereas the attitude of the Chairman regarding this violation gave the Employees cause for serious anxiety and suspicion stop.

And whereas on investigation it was found that the chairman of the Board was not qualified to act owing to his having a direct interest in the matter in dispute, as provided in Section Twelve of the Act, through being a shareholder of the Company stop.

And whereas we have searched the list of Winnipeg Electric Company shareholders kept by the Registrar in the Parliament Buildings, Winnipeg, as provided for by the Companies' Act, and found the chairman W. J. Christie being the owner of preferred stock stop.

We hereby record our formal protest against the constitution of the Board insofar as the chairman, Mr. W. J. Christie, is concerned stop.

We ask you to declare the chairmanship vacant and to proceed to fill the vacancy as provided in the Act stop.

Situation serious stop Wire reply.

A. HUME,  
Jordan Block, Fort St.,  
Winnipeg, Manitoba."

The Chairman explained that when he received this copy of the Employees' telegram from the Company he had wired the Minister assuring him that he never did and did not now own shares in the Winnipeg Electric, and the shares which appeared in his name and in the name of another party were held by them for a man in England, and that he (Mr. Christie) was prepared to forward to the Minister an affidavit to this effect.

Realizing that the power lay with the Minister to administer the Act the Board members agreed to proceed with our deliberations until such time as the Minister of Labour declared the Chairman unqualified to act, whereupon Mr. Christie read the draft of the report he had drawn up.

As the representative of the Employees, I pointed out the draft contained many mis-statements of facts and failed to deal with the

dispute as it affected the various classifications of Employees. I also objected on the ground that the draft committed the Employees and their representative to agreement with things upon which they had NOT agreed, and I contended the whole report should be redrafted.

After a lengthy argument it was finally decided that the Chairman would redraft the report, taking note of the objections raised by me as the representative of the Employees, and that a copy of same would be presented to me in order that I could have the opportunity of agreeing or disagreeing with any portion or all of the report, and if in disagreement with any portion or all of the report I would be able to prepare my minority report and submit it to the Minister along with the report of the Board—all of which, however, was contingent upon the Minister's ruling as to the eligibility of the Chairman to act as such.

The meeting adjourned on this understanding, and that same evening I got in touch with Mr. Christie, the Chairman, and asked him when I could secure a copy of his redrafted report. He advised me then that he had redrafted the report, had taken it over to Mr. Leech, the representative of the Company, and that they had both signed it in my absence and mailed it to you.

I expressed surprise at this hasty action and pointed out it was in violation of Section Forty-nine of the Act, and requested Mr. Christie to call another meeting of the Board next morning in order that I could register my formal protest to the Board and procure a copy of the report which the Chairman and the other member of the Board had signed without my being notified to be present, as provided in Section Forty-nine. I also advised Mr. Christie that I would take the matter up with the Minister of Labour, which I did, as per the following wire:—

December 3, 1931.

To Hon. G. D. ROBERTSON,  
Minister of Labour, Ottawa.

Meeting of board held this afternoon at which chairman in spite of employees formal protest as to his qualifications to act submitted draft report containing many misstatements of facts which I protested stop Board agreed report should be redrafted stop To-night phoned chairman to find when I could get redraft and was informed he had taken his report to employers representative both signing same in my absence and said report has been mailed without my knowing its contents stop This meeting held contrary to section forty-nine of Act stop Protest you accepting report as it is illegal for above reasons stop Have protested action to chairman he has agreed to call meeting Friday at ten-thirty to give me opportunity to see contents of a report which has already been for-

warded to you stop Only reason I can see for chairman's action in rushing report without me knowing its contents is to override men's challenge of his qualifications to act as chairman which still awaits your decision stop Wire instructions and standing of chairman at once as I intend to register my protest at meeting in the morning re action taken by chairman.

ROBERT BOYD RUSSELL,  
54 Adelaide Street, Winnipeg.

Mr. Christie, after consultation over the phone with Mr. Leech, agreed to call another meeting of the Board next morning, December 4, at 10.30 o'clock. At this meeting I registered my protest before the Board as I had done personally to Mr. Christie, the Chairman, the previous evening, and demanded a copy of the report he had forwarded you in violation of Section Forty-nine, which copy he gave me, and upon which I herewith proceed to present my minority report in the event that you accept their report as being a majority report of the Board.

In dissenting from the opinions and decisions of the other two members of the Board as contained in their report, a copy of which, as I have above stated, I only received after same had been forwarded to you without my knowledge, it is necessary for me to do what the other two members have failed to do, namely, review the case as presented by both sides.

At the first public meeting of the Board held Friday, November 6, Mr. Dahl, representing the Company, in opening his case stated the Company had deferred taking this action to reduce wages until they had reached a point where they felt they could not get relief in any other way from their serious financial difficulties, and as a last resort, and with the greatest reluctance they had been compelled to give notice to the men of a 10 per cent cut in wages to become effective November 1.

Proceeding, Mr. Dahl stated the Company had two reasons for asking for this reduction: first, the inability to pay the present wages under the existing financial conditions; second, the marked decrease in the cost of living.

Dealing with the financial position of the Company Mr. Dahl claimed this was their main reason for seeking reductions at this time, and he therefore presented a financial statement of the Company for the year ending September, 1931, marked Exhibit No. 2, which is dealt with by the other two Board members in their report. In reference to this those Board members have misstated the facts, which I protested at the meeting of the Board on December 3, arising out of which the Chairman promised to rectify this in his redraft, but which he has failed to do in the report I have now before me.

In their report the other two Board members say: *"There is in addition to this the common stockholders whom the Company claim, and which the Board find to be correct, have invested large amounts in the railroad property and who have for some time received no dividends."* This is a deliberate misstatement of fact. The Board had NO evidence presented before it to show that common stockholders have invested large amounts in the railroad property; yet, in spite of Mr. Christie promising to correct this, he has failed to do so.

The majority members of the Board also claim that Exhibit No. 5 presented by the Company showed their passenger revenue as decreased monthly comparing the months in 1929 to 1930, and a further reduction when comparing the months up until October, 1931, against the same months of 1930. But they entirely overlooked the evidence presented by the Employees in their Exhibit dealing with this matter.

In Exhibit No. 18 presented by the Employees it shows that in the month of November, 1930, 737 Motormen, Conductors and Busmen were employed on an eight-hour day, whereas in November, 1931, only 640 Motormen, Conductors and Busmen were employed on a seven-hour day. Thus it will be seen that in this one year alone the Company employed 97 less Motormen, Conductors and Busmen, and that the men employed were only working a seven-hour day whereas the year previous they worked an eight-hour day.

From this it is obvious that the reduction in expenses procured at the expense of the Employees more than took care of the decrease in revenue that the Company had sustained, yet the other two Board members make no reference to this when dealing with the matter.

In their report the Chairman and the representative of the Company state: *"The Company claim that they have been able to make a considerable saving by altering cars, so that they can operate one-man cars instead of two-men cars, but they have increased the wages of men operating one-man cars 5½ cents an hour. This was started some years ago."*

The above is an entirely misleading statement. The Company did not claim they had been "able to make a considerable saving, etc.," and it is entirely deceptive to say: *"But they have increased the wages of men operating one-man cars 5½ cents an hour."*

It was clearly explained to the other two Board members that when the one-man car was introduced over the protest of the men in order to get men to do the work which was formerly done by two men the Company was

forced to pay an additional amount of 5½ cents per hour, which is the practice of every electric railroad where one-man cars operate.

I protested this statement of the Chairman's, and he promised to correct same, but all he has done is to add the words: *"This was started some years ago,"* which does not explain the situation at all and would make it appear that the Company had given the one-man car operators an increase in wages.

I must also register my protest against the misstatement of facts as contained in the next paragraph of the majority award, wherein the Chairman and the Company representative state: *"Exhibits were shown as to the difference in the cost of living from 1929 compared to the 1st of November, 1931, and the difference shown is 20.8 per cent less in 1931. This was accepted by both parties."*

This was NOT accepted by both parties, as will be seen from the following taken from Page 6 of Exhibit No. 16, being the Employees' reply to the Company's claim; it reads:—

*"The Company has submitted to this Board Exhibits wherein they claim that the cost of living for Winnipeg dropped 20.8 per cent between November, 1929, and September, 1931. But it is very obvious that in using the month of November, 1929, as against September, 1931, it was for the purpose of trying to show a greater decline in the GAZETTE index because September, 1929, shows the cost of living lower than November of 1929. Why does the Company not use September of 1929 against September of 1931? However, that by the way. Our contention is that the only comparison to be made is from last year when, as we have already stated, the Donovan Board claimed that 'our wages were fair and reasonable.'"*

In spite of the fact that I, as the representative of the Employees, drew this misstatement of fact to the attention of the other two Board members and they promised that same would be rectified in the redraft, they have failed to correct it, and have forwarded, as I have previously pointed out and protested, their report to you containing this misstatement without giving me the opportunity of seeing same.

The next statement of the majority members of the Board which I must point out as a misrepresentation of fact is where they say: *"The Company claimed that the increase in wages from time to time was caused by the employees making application for increases on account of the higher cost of living during different periods between 1916 and 1931, and the advances were generally made on that account."*

But the two Board members fail to show that the men protested this contention of the Company's, and pointed out that only last year the men sought increases in their wages

and holidays with pay and that no attempt was made to base it on the higher cost of living, but strictly on the relative wage of the men, in other words, in relation to what they receive in wages for the work they perform.

I must also register my protest to the statement made by the majority members of the Board wherein they say: "*It is estimated that there are ten thousand people out of employment in Winnipeg at the present time.*" Here again is a misstatement of facts. There are over ten thousand persons alone receiving relief from the City of Winnipeg, regardless of the thousands more who are unemployed and receiving no relief. My reason for drawing this point to the Minister's attention is the fact that it is only another instance, in my opinion, of the loose way in which the other two Board members have dealt with this whole matter.

Towards the end of the Board's sittings, which were held in public, the Company presented their final brief, being a summary of their arguments and rebuttals, which was marked Exhibit No. 27; and the men also presented a final brief summing up the Employees' arguments, which is known as Exhibit No. 35. Herein both parties summarized their contentions as to why and why not the 10 per cent reduction should or should not go into effect.

In the summary of the Company's case in Exhibit No. 27 appears the following: "Generally speaking the Company's statements to the Board are in support of three propositions; first, the Company's financial position is such that it is unable to continue paying the present wage scales; second, the cost of living has been reduced more than 10 per cent so that a decrease of 10 per cent in the nominal wages or salaries of its employees will not involve any decrease in the real wages and consequently the reduction will not adversely affect the employees' standard of living; third, in asking its employees to accept a decrease in wages the Company is simply doing what a number of industries have already done and are doing practically in every country in the world, the general trend of wages all over the world being downwards."

Then the Company in its brief, which is Exhibit 27, goes on to elaborate the three points upon which they claim they are entitled to reduce the men's wages, and dealing with the reduction in receipts have the following to say: "It goes without saying that the decrease in receipts is due to a decrease in traffic, and naturally the decrease in traffic has made it possible to curtail service, with the result that to some extent it has been possible to offset the decrease in passenger receipts by

decrease in operating expenses. Furthermore, the Company has been obliged because of the diminution in revenue to put into effect economies wherever possible, and this has included the extension of the one-man operation."

Here we see the admission by the Company of the men's contention that all economies effected have been at the expense of the Employees by reducing their numbers and by further extending the one-man car service, thereby having one man do the work formerly done by two men with the man only receiving 5½ cents per hour more for the displacement of his fellow worker.

In this same brief, in dealing with the contention of the Employees that in reducing their hours in order to employ more men they have accepted a 12½ per cent reduction in wages which equals the reduction in the cost of living which has taken place and which the LABOUR GAZETTE shows as 13 per cent, the Company has the following to say:—

"The men in their arguments have placed considerable stress on the fact that during the summer they have been working on a seven-hour day, and rather urged the point that in going to the seven-hour day they have already accepted the equivalent of a 12½ per cent decrease. No doubt it was a nice thing for the men to go to a seven-hour day last spring in order to keep in employment a number of trainmen who otherwise would have been out of work. They cannot be criticized for this action, but so far as the Company is concerned no saving in operating expenses resulted from this change, and consequently this change did not in any way serve or help the railway utility improve or cope with its problem of decreasing revenue. Only a decrease in the rate per hour will accomplish this. *We wish to make it clear, and have already stressed the point, that the financial condition of the railway is such that we are obliged to reduce operating costs, and it is for this reason that we have asked the men to accept a 10 per cent decrease in wages.*"

Here is a straight admission by the Company that it was their financial position that caused them to seek this cut, and not the decrease in the cost of living. Yet the majority members of the Board base their whole contention in recommending this reduction on the lower cost of living, to which I cannot subscribe.

In rebuttal to those final arguments submitted by the Company the Employees, in Exhibit No. 35, have the following to say:—

"In summing up our case we hope the Board will realize the importance of the various points we have made, which are as follows:—

1st. We desire this Board to note that the Company has failed to offset our evidence that

the employees in reducing their hours of labour in order to give employment in these abnormal times to a larger number of men, have in so doing voluntarily reduced their daily or weekly wages by 12½ per cent, which, as we have shown very clearly in our main brief, takes care of the 13 per cent decrease in the cost of living which the Labour Gazette shows has taken place since last year when the Donovan Board declared 'Our Wages were Fair and Reasonable.'

2nd. We submit that the Company has failed to disprove our contention that prices will rise, thus offsetting the present lopsided reduction in the cost of living which is largely accounted for by the fall in the prices of farm products, because:

(a) We cannot produce vegetables in Canada during the winter and will therefore have to import same from the U.S.A., where at present the Canadian dollar is at a discount of from 10 per cent to 12 per cent, on top of which must be added the tariff duties imposed by our Government on such imports;

(b) The upward trend in the price of wheat will reflect itself very quickly on the prices of all other commodities.

3rd. We contend the Company has failed to even attack let alone upset our contention that to-day 640 motormen, conductors, and busmen, working seven hours per day in order to give employment to a greater number of men, are not only doing the work formerly done by 994 men on an eight-hour day in the year 1927, but are also operating more vehicle miles; and that as a result of this, as pointed out on page 11 of Exhibit No. 15, using the figures presented by the Company before the Public Utilities Commission, *The Company has Saved in Wages alone, through the Introduction of the One-man car, the sum of \$2,073,573.*

4th. We contend this Board should pay particular attention to the claim we make in our original brief, Exhibit No. 16, wherein we point out that in no other line of industry, where the employees have shared the work available amongst the larger number of men and in this way reduced their daily or weekly wages, as we have done, rather than throw a greater number of men out of employment, was there any attempt being made by employers of labour to reduce wages.

In this connection let us remind the Board members that the Company tabled an Exhibit, marked No. 13, which has proven our contention. In this Exhibit No. 13 the Company admits that neither the Canadian Pacific Railway, the Canadian National Railway, the Consolidated Mining and Smelting Company, Service Stations Ltd., nor the Howard Smith Paper Company, whose employees have reduced their wages as we have done by sharing the work amongst the greater number, have made any attempt to reduce wages.

5th. We would remind the Board of the large contribution the employees have already been called upon to make through loss of gross wages by the introduction of the one-man car, which has left only a small number of men to not only carry on the work formerly done by two men operating a car, but at the same time operate more vehicle miles amidst greater density of traffic, thus reducing our relative wages, as brought out in pages 9, 10, 11 and 12 of our main brief, known as Exhibit No. 16.

6th. We also rely upon the Board members agreeing with us in our contention that our present wages should not be reduced on the ground that the Company, in presenting their case, admit that they only make this attack upon our wages because they have up until now been unable to secure relief from the unjust tax placed upon their gross earnings, and other municipal and provincial taxes, plus unfair paving charges and unfair taxi competition.

We feel confident the Board members will agree with us that this is a vicious principle to apply. It means, in other words, that the innocent should be slaughtered for the sins of the guilty! Why not place the penalty where it rightly belongs, instead of attempting to further reduce our already meagre standard of living?

7th. We submit—and we hope this Board will not overlook the point we made at page 14 of Exhibit No. 16—that if the Company needs financial relief they should get same from either increased fares, which will spread the burden over the whole car-riding public, or by relief from unjust taxation and unjust competition from taxis, which will spread the burden over the whole community, where in our opinion it rightly belongs, instead of attempting to make a reduction of 10 per cent in our wages on top of the 12½ per cent cut we have already sustained by each employee working shorter hours, which has given employment to over 100 men and thereby kept these men and their families from becoming public charges.

8th. We would also like to again draw to the Board members' attention the argument set forth on page 2 of Exhibit No. 17, wherein we contend that no person in these very trying times would seriously consider the Company's proposal that, in order to make up for this 10 per cent cut in our wages the Company proposes should be made, we should go back to an eight-hour day and thereby deprive large numbers of employees and former employees from sharing with us the amount of work available.

We would further point out in this connection that the argument advanced by the Company that it would not mean any reduction in the present staff does not give a true picture of the situation, because there are at the present time hundreds of former employees temporarily out of employment who have been living in expectation of getting back to work now that the winter schedules will be going into effect, but who will be denied this work if the Company's proposal to lengthen our present hours of labour is agreed to by the present employees.

9th. We contend that the street railway business is not competitive—outside of the parasitical competition of the taxi cab, and we hope this Board will recommend to the City Council, the Minimum Wage Board, and the Public Utilities Commission that they take the necessary action to remedy same—and because of this we contend the wages being paid on other street railways either in Canada or the United States have no bearing upon our case.

But, before leaving this phase of the question, let us again remind the Board that none of the street railway systems in Canada are attempting, like our Company, to reduce the wages of their employees.

10th. We hope the Board will not overlook the fact that insofar as the Track Department Employees are concerned, as we have pointed

out on pages 4, 5 and 6, of Exhibit No. 16, these men—who are the lowest paid and who have also accepted reduced hours as have the motormen and Mechanical Department employees, in order to keep more men in employment—are all married men who at the present time are only earning from \$12.65 to \$17.55 per week—and even lower than this, if it should rain or holidays intervene. These employees cannot be asked to accept the proposed reduction of 10 per cent for, as will be seen in Exhibit No. 16, at the present time they earn less than what an unemployed married man receives on city relief.

11th. In connection with the employees of the Mechanical Department, we hope the Board will realize, as we have pointed out in Exhibit No. 25, that the proposed reduction would reduce our hourly wages from 6 cents to 20 cents per hour below the same class of labour in the steam railroad shops.

12th. In conclusion, let us again say that having already reduced our wages by 12½ per cent, and the Company having failed to prove that the cost of living has decreased any more than this since the Board of last year declared 'Our wages to be fair and reasonable,' and further, having been awarded the right to holidays with pay on principle by the Board of last year, we contend that instead of the Company seeking to reduce our wages they should be devising ways and means of putting our holidays with pay into effect.

*We base our contention on these grounds alone, aside from our other equally important reasons, as outlined in this and our main brief, and apart entirely from the fact that we never have and do not now agree that our wages should be governed by the cost of living, but rather in relation to the service we render, or in other words, as we have pointed out, in relation to what we produce with what we receive, namely, our relative wage.*

There is just one other matter we think the Board members should have brought to their attention, and that is page 25 of the Public Utilities Commission's report, filed by the Company as Exhibit No. 4, where they say: 'It is not proposed that wages or personnel should be reduced.' Here we see that the Public Utilities Commission, which is close to the public on this question, realizes it would be wrong to reduce wages at this time, and we hope we have been able to show to the Board members that the proposed reduction in our wages will only make the situation worse, and that they will find in our favour and against the Company."

I think that the evidence and conclusions appearing in the Employees' final brief are justification for me dissenting from the other two Board members. The Company has based the whole of its case on its present financial difficulties, and the men have shown that they should seek relief not by attacking their wages but from the sources which are responsible for its financial difficulties, and I am in hearty accord with the contention

of the men that the wages of the Employees should not be reduced by 10 per cent at this time.

In connection with the Gas Workers' claims it was agreed before the Board that all of the arguments presented by the Company and submitted by the Employees of the Transportation, Mechanical and Track Departments would apply, but the Company was unable, in presenting the financial condition of the Gas Department, to show the same serious decline in revenue. Even the Chairman and the representative of the Company in their report recognize this where they state: "The statements submitted by the Company in connection with the Gas Department showed that after paying all wages, expenses, depreciation, and interest on bonds, they made a small loss, but the percentage of loss compared with the investment was not nearly as great as the Street Railway Department loss."

There is one point here I must stress, and that is that the Company's claim in regard to the other Employees was based almost solely on their financial inability to pay the present scale of wages, but in the year 1929 and in all years previous to that the Gas Department not only earned sufficient to meet their bond interest, and preferred stock dividends, but had thousands of dollars available for dividends on common stock. Yet all during those periods the Company struggled strenuously against giving those Gas Works Employees any increase in wages or better working conditions. However, immediately they experience a little financial reverse during the present abnormal year they at once claim the right to reduce the Employees' wages in this Department also by 10 per cent.

In the years 1926, 1927, 1928, and 1929 alone the Gas Works Department, after meeting all bonded indebtedness and paying dividends on their preferred stock, had the sum of \$267,735 to distribute amongst their common stockholders. These figures are taken from Exhibit No. 33 presented by the Company.

In view of this fact alone I cannot agree with the other two Board members that the Gas Works Employees' already low wages should be reduced at this time.

All of which is respectfully submitted,

(Sgd.) R. B. RUSSELL,

Representing the Employees,  
this 11th Day of December, 1931.

## STRIKES AND LOCKOUTS IN CANADA DURING DECEMBER, 1931

THE number of strikes and lockouts in existence in Canada during December was fourteen as compared with eleven the preceding month. The number of workers involved and the time loss, however, showed a decline, owing largely to the cessation toward the end of November of two strikes of sawmill workers on the Pacific Coast which had involved approximately one thousand workers during that month. In comparison with the figures for December, 1930, almost twice as many strikes and lockouts were recorded, a corresponding increase appearing in the number of workers involved and the time loss incurred.

Date	Number of disputes	Number of employees involved	Time loss in working days
*Dec., 1931..	14	1,268	14,927
*Nov., 1931..	11	1,660	22,489
Dec., 1930..	8	723	8,661

\* Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration, and disputes involving less than six employees, are included in the published record only when ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes."

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Six disputes, involving approximately 480 workers, were carried over from November, and eight disputes commenced during December. Of the fourteen disputes in progress during the month, eight were recorded as terminated, four being in favour of the employers concerned, two in favour of the workers involved, one resulting in a compromise and the result of one being recorded as indefinite. At the end of December, therefore, there were six disputes recorded as strikes or lockouts, namely: women's clothing factory workers, Toronto, Ont.; motion picture projectionists, Edmonton, Alta.; lumber workers, Campbell River, B.C.; lumber workers, Nipigon district, Ont.; coal miners, Robb, Alta.; and compositors, Saskatoon, Sask.

The record does not include minor disputes such as are described in a previous paragraph, nor does it include disputes as to which information had been received indicating that employment conditions are no longer affected, but which the unions concerned have not yet declared terminated. Information is available as to six such disputes, namely: motion picture projectionists, Ottawa, Ont., Feb. 23, 1931, one employer; photo engravers, Toronto, Ont., March 23, 1931, one employer; sawmill workers, Barnett, B.C., September 23, 1931, one employer; photo engravers, Toronto and London, Ont., Montreal and Quebec, P.Q., and Winnipeg, Man., May 4, 1931, one employer; motion picture projectionists, Montreal, P.Q., August 27, 1931, one employer; and cooks and waiters, Edmonton, Alta., September 29, 1931, one employer, the last three being added this month. The dispute of cloakmakers employed by one firm in Winnipeg, Man., commencing October 27, 1931, and added to this list last month, is reported to have terminated early in December, and has consequently been removed from the list.

A strike of twenty-five men's clothing factory workers in one establishment in Montreal from November 17, 1931, to November 27, was reported to the Department too late to be included in the December issue of the LABOUR GAZETTE. The strikers demanded the restoration of certain working conditions which had been changed and the reinstatement of a shop steward who had been discharged. These demands were conceded.

A cessation of work for four days by carpenters and bricklayers employed on the construction of two buildings in Hamilton at the beginning of December, owing to changes in wages proposed by the contractors, has been reported in the press. It appears that negotiations between the contractors' association and the various building trades unions regarding reductions in wages were in progress and that work on these two buildings was suspended pending the result of such negotiations, which resulted in the following changes: bricklayers reduced from \$1.25 per hour to \$1.10, carpenters from \$1 per hour to 90 cents, tilesetters from \$1.15 per hour to \$1, sheet metal workers from \$1 per hour to 90 cents, roofers from 75 cents per hour to 65 cents and plasterers from \$1.25 per hour to \$1.12½.

The following paragraphs give particulars regarding certain disputes in addition to the information given in the tabular statement:—

CLOAKMAKERS, TORONTO, ONT.—In this dispute, an alleged lockout commencing Novem-

## STRIKES AND LOCKOUTS IN CANADA DURING DECEMBER, 1931

Industry, occupation and locality	Number of workers involved	Time loss in working days	Remarks
--------------------------------------	-------------------------------------	------------------------------------	---------

## (a) Strikes and Lockouts in Progress Prior to December.

<b>MANUFACTURING—</b>			
<i>Textiles, Clothing, etc.</i>			
Women's clothing factory workers, Toronto, Ont.	200	5,200	Alleged lockout; commenced Nov. 19, 1931; for union wages and working conditions; untermi- nated.
Men's clothing factory workers, Montreal, P.Q.	125	250	Commenced Nov. 26, 1931; against alleged viola- tion of agreement; terminated Dec. 3, 1931; in favour of workers.
<i>Printing and Publishing—</i>			
Photo-engravers, Toronto and London, Ont., Montreal and Quebec, P.Q., and Winnipeg, Man.	100	2,000	Commenced May 4, 1931; for union agreement; working conditions no longer affected by end of December; in favour of employer.
<b>SERVICE—</b>			
<i>Recreational—</i>			
Motion picture projectionists, Montreal, P.Q.	44	500	Alleged lockout; commenced Aug. 27, 1931; <i>re</i> union wages and working conditions; working conditions no longer affected by end of December; in favour of employer.
Motion picture projectionists and musicians, Edmonton, Alta.	7	190	Commenced Nov. 14, 1931; for payment of wages in arrears; untermi- nated.
<i>Business—</i>			
Cooks and waiters, Edmonton, Alta.	5	135	Commenced Sept. 29, 1931; for union wages and working conditions; working conditions no longer affected by end of December; in favour of employer.

## (b) Strikes and Lockouts Commencing during December, 1931.

<b>LOGGING—</b>			
Lumber workers, Campbell River, B.C.	36	850	Commenced Dec. 3, 1931; for increase in wages; untermi- nated.
Lumber workers, Nipigon dis- trict, Ont.	100	1,000	Commenced Dec. 4, 1931; for increase in wages; terminated Dec. 16, 1931; in favour of workers.
Lumber workers, Nipigon dis- trict, Ont.	100	400	Commenced Dec. 28, 1931; for increase in wages; untermi- nated.
<b>FISHING AND TRAPPING—</b>			
Fishermen, North Sydney, N.S.	240	2,500	Commenced Dec. 3, 1931; for restoration of pre- vious season's prices of fish; terminated Dec. 15, 1931; compromise.
<b>MINING, NON-FERROUS SMELTING AND QUARRYING—</b>			
Coal miners, Wayne, Alta.....	165	330	Commenced Dec. 7, 1931; against alleged violation of agreement; terminated Dec. 9, 1931; indefinite.
Coal miners, Robb, Alta.....	90	900	Commenced Dec. 12, 1931; against discharge of worker and alleged violation of agreement; un- terminated.
<b>MANUFACTURING—</b>			
<i>Printing and Publishing—</i>			
Compositors (news and job), Saskatoon, Sask.	44	660	Alleged lockout; commenced Dec. 14, 1931; against decrease in wages; untermi- nated.
<b>SERVICE—</b>			
<i>Public Administration—</i>			
Unemployment relief workers, Dominion, N.S.	12	12	Commenced Dec. 10, 1931; for increase in piece rates; terminated Dec. 11, 1931; in favour of employer.

ber 19, 1931, in two establishments in Toronto, and arising out of a question of union wages and working conditions, the union reported that during December two hundred workers were still involved.

**MEN'S CLOTHING FACTORY WORKERS, MONTREAL, P.Q.**—As stated in the December issue of the LABOUR GAZETTE, this dispute, commencing November 26, 1931, in one establishment in Montreal, in protest against an alleged violation of agreement by sending work to non-union shops, was terminated early in December, the strikers returning to work when the employer agreed to abide by the terms of the agreement.

**PHOTO ENGRAVERS, TORONTO AND LONDON, ONT., MONTREAL AND QUEBEC, P.Q., AND WINNIPEG, MAN.**—Conditions in this dispute which began May 4, 1931, the workers demanding a union agreement, were unchanged at the end of December, the union considering that the strike was unterminated at the end of the month, although the employer claimed to have replaced the strikers shortly after the commencement of the dispute; but as working conditions were no longer affected the strike has been added to the list of such disputes carried elsewhere in this article.

**MOTION PICTURE PROJECTIONISTS, MONTREAL, P.Q.**—This dispute, which commenced August 27, 1931, when a company operating 19 theatres in Montreal refused to renew the union agreement and discharged some employees, has been added to the list of disputes where employment conditions are no longer affected, but which the unions concerned have not yet declared terminated.

**MOTION PICTURE PROJECTIONISTS, EDMONTON, ALTA.**—In connection with this dispute, involving one theatre in Edmonton since November 14, 1931, it is stated that operators in the union theatres in Edmonton have voluntarily gone on the 5-day week in order that the motion picture projectionists on strike may secure some work as substitutes. At the end of December no termination had been reported, but the workers had been replaced. Two musicians were also involved.

**COOKS & WAITERS, EDMONTON, ALTA.**—This dispute commenced on September 29, 1931, in one restaurant in Edmonton, the workers demanding union wages and working conditions. At the end of December as working conditions were no longer affected, the dispute has been added to the list of strikes and lockouts which the union has declared unterminated although the employer claims to have replaced all the strikers.

**LUMBER WORKERS (FALLERS AND BUCKERS), CAMPBELL RIVER, B.C.**—On December 3, 1931, some thirty-six loggers employed by one company operating near Campbell River, B.C., went on strike, demanding an increase of 10 cents per thousand or \$4.50 per day. The strikers, members of the Lumber and Agricultural Workers' Industrial Union, were instructed by their officials to return to Vancouver. Certain other lumber companies in the same district were paying a slightly higher wage but the difference was stated to be offset by working conditions so that the men on strike had been receiving rates equivalent to those in other camps in the district. At the end of the month no termination had been reported.

**LUMBER WORKERS, NIPIGON DISTRICT, ONT.**—(December 4, 1931, and December 28, 1931). The first of these disputes commenced early in December, when members of the Lumber and Agricultural Workers' Industrial Union employed by one firm operating in the Nipigon district went on strike to enforce their demand for an increase of 50 cents per double cord to \$3. During the strike both the mounted and provincial police were stationed in the vicinity of the camp and at certain railway stations, as the strikers were picketing those places, and also the employment offices at Port Arthur and Fort William and the pickets were reported to be threatening and molesting workmen. After about ten days the employer agreed to pay the rate demanded and work was resumed. Toward the end of the month, however, the union again called its members in these camps out on strike, demanding a further increase. Picketing was again resorted to in an effort to prevent workers being brought to the camps to replace the strikers and the employer reported that it might be necessary to close down the camps. At the end of the month the dispute was unterminated.

**FISHERMEN, NORTH SYDNEY, N.S.**—Fishermen ceased work on December 3, 1931, demanding an increase in the rate per fish paid by the dealers which was lower than that paid during the previous season. It appears that the trouble was due to conditions in connection with the storage of the fish, which were said to prevent the most efficient marketing. As the result of the intervention of the municipal authorities and the Board of Trade it was agreed prices for fish would be increased slightly, an arrangement being made as to the disposal of the fish from the various boats. Work was therefore resumed on December 15, 1931, and negotiations were continued as to further changes in marketing.

**COAL MINERS, WAYNE, ALTA.**—This dispute commenced on December 7, 1931, members of the Mine Workers' Union of Canada employed by one company operating near Wayne, Alta., going on strike in protest against the dismissal of an employee and certain conditions alleged to be in violation of the agreement between the company and the union. The officials negotiated with the pit committee with the result that on December 9 work was resumed under the same conditions as before the strike, pending further negotiations. Pickets had been stationed about the mine and police were also present but no disturbances were reported during the dispute.

**COAL MINERS, ROBB, ALTA.**—On December 12, 1931, about ninety workers, members of the Mine Workers' Union of Canada, employed by one company operating collieries at Robb, Alberta, ceased work to enforce their demand for the reinstatement of one of their members who had been discharged for misconduct. It is also reported that complaints as to certain working conditions were lodged, the chief being in regard to the payment for safety lamps which was alleged to be in violation of the agreement in force until March 31, 1932. The company is stated to have offered to postpone the charging for lamps until the expiration of the agreement and then put the case before a board of conciliation. The strikers, however, refused to consider this and stationed pickets about the mine, and at the end of the month the dispute was unterminated.

**COMPOSITORS (NEWS AND JOB), SASKATOON, SASK.**—This dispute, alleged by the workers to be a lockout, commenced on December 14, 1931, about forty-four workers being involved. The agreement between the Typographical Union and the newspaper involved in the dispute had terminated on November 30, 1931, and the employer had proposed a decrease in wages of ten per cent in the new agreement, other classes employed in the plant having previously accepted a similar decrease. Negotiations carried on between the parties for several weeks previously had not resulted in a settlement, the compositors' offer to compromise on the reduction being refused by the employer. The employer replaced the workers with non-union men. Arbitration was then discussed but not agreed to, and at the end of the month no termination had been reported.

**UNEMPLOYMENT RELIEF WORKERS, DOMINION, N.S.**—This dispute commenced on December 10, 1931, when twelve out of the fifty men employed to dig sewers under the unemployment relief agreement went on strike, demanding an increase in piece rates of payment on account of frozen earth. The strikers were informed by the authorities that they could return to work at the rate in force if they wished, but that no increase would be granted; and the next day the men returned with no change in conditions.

## STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month, bringing down to date that given in the issue for February, 1931, in the review of Strikes and Lockouts in Canada and other countries, 1930. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1919 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, and for such countries the latest figures are not for relatively recent dates.

### Great Britain

The number of disputes beginning in November was 33 and 3 were in progress from the previous month, making a total of 36 disputes in progress during the month, involv-

ing 9,200 workpeople, with a time loss of 42,000 working days for the month. Of the 33 disputes beginning in November, 7 were over proposed reductions in wages, 9 on other wages questions, 2 on questions as to working hours, 7 on questions respecting the employment of particular classes or persons, 4 on other questions of working arrangements and 4 on questions of trade union principle. Settlements were reached in 26 disputes, of which 7 were in favour of workpeople, 9 in favour of employers and 10 ended in compromises; in the case of two other disputes work was resumed pending negotiations.

### Australia

During the second quarter of 1931, the number of disputes reported was 29, involving 99 establishments, directly affecting 8,079 workers, and resulting in a total time loss of 35,218 working days. The estimated loss in wages for the period was £35,628.

### New Zealand

The number of disputes reported for the first nine months of 1931 was 23, involving 35 firms and 5,215 workers. The time loss for this period was 42,067 working days and the approximate loss in wages £38,078.

### United States

The number of disputes beginning in October was 49 and 62 were in effect at the end of the month. The number of workers involved in disputes in effect at the end of the month was 34,241, with a time loss of 1,146,071 working days.

The strike of about 2,000 longshoremen at Boston, Massachusetts, which began on October 7 (LABOUR GAZETTE, November 1931, page 1183), was not terminated until December 6. The strikers withdrew their demand for higher rates of pay for overtime than was agreed to for New York and the employers agreed to discharge the non-union strikebreakers.

A strike of 2,500 longshoremen at Galveston, Houston, Corpus Christi and Texas City, ports of the state of Texas, began on October 1, against a reduction in wages of 20 cents per hour. The strike was settled on October 21, when an agreement was reached providing for a reduction of 15 cents per hour.

## CONCILIATION AND ARBITRATION BOARDS IN SPAIN

THE Minister of Labour and Social Welfare of the Spanish Republic lately introduced legislation to provide for establishing joint trade boards or "juries" for arbitration and conciliation. This will be of three types, covering respectively (1) industrial employment (2) rural property, and (3) agricultural production and industries. The different occupations are classified by groups, and each group will have a joint trade board, which may, if necessary, be subdivided into sections for its better working.

The joint boards will consist of six employers and six workers with an equal number of substitutes; but if the board is composed of several sections each section will consist of only four employers and four workers with an equal number of substitutes, unless a special permit is obtained from the Minister of Labour and Social Welfare. The employers are elected by employers' trade organizations, being those formed in accordance with the law and by the will of the members, and companies ordinarily employing not less than 100 workers, or not less than 50 workers in the case of mines or isolated industries or intellectual professions. The workers are elected by workers' organizations, which the Bill defines as those formed in accordance with the law, whose membership is composed exclusively of home workers or industrial workers, and whose aim is the defence of their occupational interests. In agriculture, employers' associations are those formed by persons engaged in farming on their own account for the purpose of protecting their interests and companies employing over 50 workers on their farms, while workers' associations are those formed by agricultural workers who are paid for their work for not less than 100 days in the year.

The employers and workers on the joint boards are elected by the employers' and workers' associations in each industry, trade, service or group of occupations registered in a list compiled by the Minister of Labour and Social Welfare. The president and vice-president will be elected by the unanimous vote of the employer and worker members. If they fail to agree, the Minister of Labour and Social Welfare will select a president from among three candidates nominated by the employers, the workers, and the delegate of the Ministry of Labour and Social Welfare respectively. The secretaries will be appointed by the Ministry and candidates must be prepared to pass an examination.

The Bill defines the functions of the joint boards as being to fix the general conditions of employment, wages, minimum duration of contracts, and regulation of holidays in each trade or occupation, and also the housing conditions of the workers in agriculture; to settle questions referred to them concerning the payment of overtime and any differences that may arise with respect to obligations under contracts of employment, unless the sum involved in the dispute is under 2,500 pesetas; to avert disputes between capital and labour by trying to establish an agreement; to watch over the enforcement of social legislation; to draw up a register; and to propose to the Government any technical measures considered useful.

The decisions of the joint boards must be taken by an absolute majority of the employers and workers at a first sitting and by a majority of the members present at a second. The president has not the right to vote unless a majority is not reached at the second sitting. He is entitled, however, to propose compromises with a view to settling differences and to obtain any information he considers neces-

sary from the employers and workers on the board.

An appeal is allowed against the decisions of the joint boards. This appeal must be submitted to the provincial inspector of factories and the Ministry of Labour and Social Welfare within twenty-four hours of the decision. Individual appeals may be submitted to the Ministry within ten days. If no protest or lawful objection has been made against the decision of the board, the agreement comes into force on the expiration of this time limit. When the time limit has expired, the factory inspector must transmit the decision to the Ministry of Labour and Social Welfare which, after consulting the Labour Council, takes a decision that is enforceable without possibility of appeal.

The joint boards or sections may designate from among their members factory inspectors with the same powers as the officers of the Factory Inspection Service. The reports of the offences and contraventions they note are sent to the joint board concerned, which may impose penalties by the same procedure as that fixed for the general inspection service.

Any difference to which an industrial dispute may give rise, and any decision of the workers to declare a strike or of the employers to stop their undertaking must be communicated to the joint board, which will consider how to establish agreement between the parties. If this formality is not observed,

the following time limits are fixed before the strike or lockout may be declared: eight days if the strike or lockout entails deprivation of light or a suspension of railway traffic or if it results in leaving sick persons and hospitals without assistance; one day in the case of a stoppage of tramways or if the strike or lockout will deprive the population of a town of its food supply; 48 hours in all other cases.

The Bill prescribes the procedure to be followed by the joint boards in their efforts to prevent or settle disputes. Leaders or promoters of a strike and employers who infringe the provisions of the Bill relating to the time limit for the declaration of a stoppage and the obligation to communicate their differences to the joint board, are liable to a fine and even imprisonment. Similarly, trade associations failing to comply with the law are liable to the penalties laid down in the Trade Associations Act. The Bill provides for the dissolution of the joint boards if the agreements they establish are likely to produce an illegal situation or disturbance of public order; and the members are liable to administrative penalties for misconduct or acts likely to injure the trade interests entrusted to them.

The term of office of the members of a joint board is three years and they are re-eligible by the same procedure as when they were first appointed.

### Wage Rates in United States in 1931

Union wage rates per hour in time-work trades in the United States were slightly higher, on the average, on May 15, 1931, than on the same date in 1930, and were higher than in any preceding year. The survey of union scales of wages and hours of labour by the Bureau of Labour Statistics shows that, for all trades covered, the average rate was \$1.254 in 1931 as compared with \$1.25 in 1930, an increase of 0.4 per cent. Of the 69 individual time-work trades covered by the survey, 45 showed increases in rates, 23 showed decreases, and one remained unchanged. Average full-time working hours per week declined from 43.9 in 1930 to 43.6 in 1931. Figured on a weekly basis, union wage rates in time-work trades have not increased to the same extent that hourly rates have, because of reductions in working hours.

Average hourly wages in two departments of the iron and steel industry—blast furnaces

and Bessemer converters—showed an increase on March 31, 1931, over the rates paid in March, 1929, according to the latest biennial survey made by the Bureau of Labour Statistics of wages in that industry. The rates for blast furnaces was 55.1 cents in 1931 and 52.8 in 1929, and in Bessemer converters, 66.4 cents in 1931 and 64.3 in 1929. A slight reduction was shown for open-hearth furnaces, in which the rate on March 31, 1931, was 70.3 cents as compared with 71.4 cents in March, 1929. Average weekly earnings in both blast furnaces, and open-hearth furnaces were lower in 1931 than in 1929, while in Bessemer converters they were higher. Reductions took place in average full-time hours per week in all three departments between 1929 and 1931; in blast furnaces, from 60.7 to 57.2; in Bessemer converters, from 53.7 to 53.3; in open-hearth furnaces, from 57.7 to 53.8. (*Monthly Labour Review*, November, 1930).

## WORKMEN'S COMPENSATION IN NEW BRUNSWICK

### Minimum Number of Employees for Various Occupations Coming Under the Act

THE Workmen's Compensation Board of New Brunswick recently announced changes in Regulations 1 and 2 under the Act. Regulation 1, as amended, re-groups the industries under the Act in a new classification, the occupations covered now being divided into five classes instead of seven as formerly.

Regulation 2 (with regulations 16, 17 and 21, which are amendments to Regulation 2) is repealed, and the following regulation is substituted therefor:—

#### REGULATION 2

Where not more workmen than the number set opposite to the names of an industry mentioned in the schedules below are usually employed therein, such industry is hereby excluded from the scope of Part 1 of the Act, and is withdrawn from the class in Regulation 1 in which it would otherwise be included; subject, however, to any conditions attached to such industry or to any conditions contained in the schedules and subject to the other regulations of the Board, so far as applicable.

Fishing . . . . . 50

Mining, including prospecting or developing work . . . . . 5

"Any ship, tug, dredge, boat or any other vessel, owned, managed or controlled in the Province of New Brunswick that is engaged in any business that takes it without the boundaries of the Province . . . 500 men."

Provided, however, that this Regulation does not apply to any ship, tug, dredge, boat or any other vessel that may be owned, managed, or controlled by His Majesty the King as represented by the Government of the Dominion of Canada in the person of the Minister of Marine and Fisheries and under the control or management of the agent of the Department of Marine and Fisheries having jurisdiction over the Province of New Brunswick.

Hand laundries . . . . . 25

Any boat or vessel, owned, managed or controlled in the Province of New Brunswick engaged in carrying freight, cargo or passengers from one part of the Province to another part of the Province . . . . . 5

Aerial flying, testing, demonstrating; carrying of passengers or freight, either by aeroplane or other means of aerial transportation, including the carrying on or work in connection with an aerodrome and all work incidental thereto . . . . . 200

(LABOUR GAZETTE, July, 1931, page 858). The benefits that have already resulted from the Act during the short period of its operation are enumerated in the *Glace Bay Gazette*, December 24, as follows:—

"The great improvement noticeable in the health, appearance and general attitude toward life on the part of many mothers who are beneficiaries under this Act; cheerfulness and hopefulness have replaced discouragement and despondency, which in some cases bordered on despair. A similar improvement is seen in the health and appearance of the children, in their more regular attendance, and corresponding progress, at school; this is doubtless due to more nourishing food and better clothing. The third, and perhaps the most important aspect of all, is that of the re-establishment of homes which had been broken up prior to the adoption of this Act; in many of these cases the children had been separated from each other, and their mother, for some years; in a great many instances the mother had been forced to be out of her home all day, trying to earn the needed, support for herself and children, thus making it impossible for her to give them the care and supervision which they needed."

The Saskatchewan Power Commission has issued new Regulations under the Electrical Licensing Act, governing examinations for journeymen; electricians' fees, etc.; supply houses; contractors; licenses, permits, and identification cards, with rules for their duration, renewal, suspension and cancellation; inspectors and assistant inspectors; standards of inspection; service of notices and orders; dangerous equipment, etc.

The Province of Quebec Safety League has undertaken a special campaign for reducing accidents of every kind during the coming year. In the sphere of industrial accidents an Engineers' Institute is being established with a view of obtaining co-operation in formulating safety codes; of investigating engineering problems involved in accident prevention; of studying accident prevention in specific industries; of organizing regional safety conferences; and of promoting accident prevention in engineering colleges.

While details of the new organization are ready they will be submitted later to the members of the league.

### Mothers' Allowances in Nova Scotia

By an Order in Council issued at Halifax on December 17, 1931, the Hon. John Doull, attorney general of Nova Scotia, was designated as the minister in charge of the administration of the Mothers' Allowances Act

## CHILD PROTECTION AND MOTHERS' ALLOWANCES IN SASKATCHEWAN

THE annual report of the Bureau of Child Protection of Saskatchewan, including the report of the Old Age Pensions Branch, has been published recently, both reports being for the fiscal year ending April 30, 1931. The information as to old age pensions is given elsewhere in the LABOUR GAZETTE, in the regular quarterly reports on this subject.

Mothers' Allowances in Saskatchewan are administered by the Commissioner of the Bureau of Child Protection, who is appointed under the Children's Protection Act. Under the provisions of the Mothers' Allowance Act of 1922 (now incorporated in the Child Welfare Act) the Legislature makes an annual grant, expended in monthly payments, in order to provide support or partial support for the dependent children under sixteen years of any woman who by reason of poverty is unable to take proper care of her child or children. The commissioner has authority in regard to all applications for allowances, subject to the Minister in charge of the Act.

The report points out that in Saskatchewan the Bureau takes care of child welfare work that is usually looked after by private and voluntary agencies in the older provinces and in most of the United States. As a result the Department has to assume an immense amount of child welfare work that in older provinces is looked after privately. Suggestions for broadening the scope of the present legislation are made in the report as follows:—

"Hundreds of homes are being kept together through the Mothers' Allowances and the Bureau is using its staff to assist in keeping families together in every possible case. In some jurisdictions they have private child caring agencies and family welfare associations working in very close co-ordination and it would appear that the scope of this department may in the future have to be broadened out a little to include child and family welfare. One recommendation along this line would be to drop the name of Mothers' Allowances and call them Children's Allowances and make provision for payment of such allowances to fathers in certain cases where mothers have died or become incapacitated. During the last year there have been a great many cases where fathers have asked for assistance under such circumstances and nothing could be done for them except perhaps to remove the children. We always hesitate to remove children merely for reasons of poverty. We have had to exert very heavy pressure on the municipalities during the year to see that such families received help. Now that many of the municipalities

are in very distressing circumstances it is going to be difficult for them to extend such help.

"Another suggestion that would allow us to help needy families, where the mothers' allowance is not appropriate, would be to provide for temporary guardianship. A child could be committed as a ward for say a year, and the parent could be paid a little for keeping it, and after the period stated it would automatically revert to the parents."

Since the Child Welfare Department has been in operation in the province 3,945 children have been made permanent wards either by surrender by the parents or through court orders. This number does not include those made wards of children's aid societies in the province. The total number of wards as at April 30, 1931, including those of Children's Aid Societies was 1,524, and there are 1,030 children in foster homes which are regularly inspected. During the year there were 336 wards discharged and the number of commitments totalled 295.

*Mothers' Allowances.*—The report of the Mothers' Allowance branch outlines the work performed during the year. As in former years the amount expended shows the same steady increase, which, it is pointed out, was to be expected owing to the general economic situation. However, a study of the statistics since January, 1928, indicates that the amount expended per child has remained consistent.

"In checking over the applications for allowance," the report states, "it is very noticeable that many mothers are receiving the allowance on account of their husbands being convicted for a term of seven months for making or selling intoxicating liquor. During the year no less than 95 applications were received and the sum of \$19,500 was expended to support the families of men who were also receiving their board and lodging at the expense of the Government."

The number of widows receiving allowances as at April, 1931, was 1,633; the number of dependants, 494; the number of guardians, 56, total number of children under sixteen years of age, 6,590. During the fiscal year ended April, 1931, the total amount paid in allowances was \$544,250; the average paid per recipient was \$22.34; and the average paid per child was \$7.63.

Other phases of the Bureau's work include: juvenile offenders, mental defectives, legal adoption of children, children of unmarried parents, blind and deaf children, and the activities of Children's Aid Societies.

## CHILD LABOUR LEGISLATION IN THE UNITED STATES IN 1931

**T**HE National Child Labour Committee (New York) recently issued summaries of legislation enacted, and of legislation defeated, by the legislatures of the various States of the American Union during 1931. The legislation enacted was briefly as follows:—

**Alabama.**—The school-leaving age of children receiving permits to work on leaving school was raised from 14 to 16 years, but permits may be issued to children over 14 for work outside school hours provided that their work is satisfactory. The workmen's Compensation Act was amended to provide for payment of double rates of compensation to minors who are illegally employed.

**Colorado.**—The Federal Child Labour Amendment was ratified (The proposed amendment was noted in the LABOUR GAZETTE at the time of its passage by the United States House and Senate, May, 1924, page 446; August, 1924, page 630).

**Connecticut.**—The school attendance law, which requires work permits for all children between 14 and 16 years of age, was extended to cover work of all kinds.

**Delaware.**—The minimum age for employment in canneries was raised from 12 to 14 years.

**Maine.**—Employment in or about motion picture projection booths was prohibited for children under 16 years. The act governing hours of work was modified so as to allow children under 16 years of age to work 54 hours in laundries. Formerly laundries were on the 8-hour day list for children under 16.

**Massachusetts.**—The apprenticeship law was amended to prohibit the full-time employment of any woman or child in any establishment for no other compensation than instruction in a particular trade or line of employment.

**Michigan.**—The workmen's compensation law was amended to extend the provision for additional compensation in case of illegal employment to all minors under 18. Formerly only minors between 16 and 18 were eligible.

**Nebraska.**—The law governing night work was weakened by an amendment allowing women and girls over 16 years to work until 1230 a.m. instead of 10 p.m.

**New Jersey.**—The educational requirements for children leaving school for work

were raised. (A commission is engaged in examining the problem of migratory children in this State).

**New Mexico.**—Provision was made for checking violation of the Child Labour Law.

**New York.**—An amendment to the 48-hour law for women and girls over 16 years employed in mercantile establishments reduces the amount of overtime allowed from 78 hours to 25 hours a year, with extra provision for inventory taking and for Christmas week. Except during Christmas week, no working day is to exceed 10 hours and no week, 54 hours.

**North Carolina.**—Children under 16 are prohibited from employment in running elevators, around exposed electric wires, in the manufacture, preparation or use of any poisonous substance or gas or explosive, or in the oiling or cleaning in motion of such machinery as the State Child Welfare Commission shall designate as hazardous. The 8-hour day and 48-hour week are extended to all children under 16 in the occupations covered by the child labour law with the exception of boys over 14 in certain cases of poverty.

Working hours for women and girls over 16 in factories, manufacturing establishments and mills are restricted to 11 hours a day and 55 hours a week. All restrictions on hours for men and boys over 16 are removed, also for such boys between 14 and 16 years as are exempted from the 48-hour law. Girls between 16 and 18 years are prohibited from working after 9 p.m. and before 6 a.m. in factories, mills, canneries, workshops or manufacturing establishments. Boys between 14 and 16 are allowed to distribute newspapers and magazines over fixed routes after 5 a.m. and before 8 p.m. but not for more than 4 hours a day or 24 hours a week. Under the former law, which still applies to boys between 12 and 14, street work was prohibited after 7 p.m. and before 6 a.m., but the number of working hours in addition to school attendance was not limited.

**Oregon.**—An apprenticeship commission was established with regulations for apprenticeship of boys over 16 years for periods of not less than two months; apprentices are required to attend school or training courses at least four hours a week.

**Pennsylvania.**—A new law controls the employment of migratory children.

Double compensation must be paid in respect to children illegally employed and who meet with accidents.

*Rhode Island.*—A 48-hour week was established and night work prohibited after 10 p.m. for women and girls over 16 years, but the maximum working day of 10 hours was not reduced. The law governing the employment of children in theatres was weakened by an amendment allowing resident children of any age to appear in dancing, musical or theatrical performances on any day when schools are not in session except Sunday if accompanied by a parent or guardian, on permit from the mayor. (The former law prohibited the appearance of resident children under 16 years of age, at any time).

*South Dakota.*—Provision was made for enforcing the existing laws relating to the employment of women and children.

*Texas.*—Minors, whether legally or illegally employed are entitled to the benefits

of the workmen's compensation law and in computing their compensation consideration may be given to any increase in earnings which might have been expected under normal conditions. Formerly minors illegally employed were excluded from the benefits of the Act.

*Vermont.*—Penalties for those who cause a child not to attend school were raised. Vocational school pupils over 14 years of age may be legally employed as part of their training. The commissioner of industries was authorized to refuse to grant work permits on grounds of physical unfitness.

*Wisconsin.*—In the case of young workers permanently disabled, weekly earnings shall be on the basis of the earnings which such an employee, if not disabled, would probably have earned at the age of 27 years. Formerly probably earnings at 21 years was the basis.

### Labour Legislation of Venezuela

Labour Legislation of Venezuela is the subject of the third of a series of bulletins on labour legislation in the Latin American countries, now in course of publication by the United States Bureau of Labour Statistics (Bulletin No. 549). On July 23, 1923, Venezuela enacted a labour law dealing with workmen's compensation, wages, employment of women and children, hours of labour, settlement of labour disputes, and employers' and workers' organizations. The law covers all public or private enterprises and establishments, irrespective of their nature, which exist at the present time in the Republic or which may be established in the future, including mining and industrial enterprises, agricultural and stock-raising undertakings, and mercantile establishments.

Under the workmen's compensation provisions owners of enterprises employing 25 wage earners or more, who are not expressly exempted, are required to pay the wage earners, salaried employees, and apprentices in their employ compensation for industrial accidents and occupational diseases arising out of and in the course of employment, irrespective of any fault or negligence on the part of the workers, employees, or apprentices. The following classes are among those exempted; occasional workers; home workers, employers receiving more than 600 bolivars (a bolivar represents about 20 cents in Canadian currency); fishermen and farm and forest work-

ers. (Employees in industries that are recognized as specially hazardous are covered by special legislation). The scale of compensation is based upon the earnings of the injured employee at the time of his death.

In regard to wages, the fixing of the amount is left to be arranged between employers and workers without interference. Wages must be paid in legal currency either daily or weekly at the latest, unless an agreement has been made for longer periods. No other form of payment is permitted. In no case may wages be paid in places of recreation, taverns, saloons, or grocery stores.

No children under 14 years of age are to be allowed to work in industrial establishments or mining enterprises. The working day of minors over 14 and under 18 years of age shall not exceed 6 hours and shall be divided into periods of three hours with an interval of at least an hour, during which they may leave the place of employment to eat or to rest.

Women and minors may be employed only between 6 a.m. and 6 p.m. Young persons between 14 and 18 may not be employed in mines, foundries, or in work in which their lives are endangered or in which their normal physical development is hindered or retarded. Women are prohibited from working underground in mines. No wage earner or salaried employee may work longer than nine hours a day in the enterprises or establishments sub-

ject to this law. Work which requires longer time must be performed by employees or workmen other than those who have worked for nine hours. Every agreement which provides for a longer workday is void. However, workers who are employed by the job or by the piece are permitted to devote more than nine hours daily to the work assigned to them if they so desire, but they need not be required to perform in one day work which normally requires more than nine hours' work to complete.

The hours of labour underground in mines are as follows: "The working day shall not exceed eight hours and shall be divided into three shifts of 8 hours each, or 4 shifts of 6 hours each, according to circumstances. The hours of shifts to begin and stop shall be fixed by the regulations governing mining enterprises. A sufficient number of miners, foremen, and superintendents shall be employed in each shift."

The governors of the States and of the Federal District or the Federal Territories are

to act as arbitrators to settle differences as regards working days, maximum length thereof, workmen's compensation, and wages, provided such disputes are voluntarily submitted to them by the employers and workers and when a shutdown of one or more industries is anticipated. The decision of the arbitrator may be appealed by either of the parties to the Minister of Interior Relations, whose decision shall be final. If the parties fail to agree to submit the question to arbitration, either one has a right to appeal to the courts.

The Venezuelan labour law provides that organizations of employers and workers shall not affiliate with foreign organizations, nor shall they send delegates to international congress, without the previous consent of the Federal Executive.

Provision is made for the establishment of a labour bank, with a capital of six million bolivars, its main purpose being to enable workers to acquire their own homes.

## BRITISH ENQUIRY ON HOURS OF SHOP ASSISTANTS

IN 1930 the British House of Commons appointed a Select Committee to consider and report upon proposals for limiting the hours of shop assistants and improving the conditions of their employment. This committee presented its report in December, 1931. It was found that the only direct statutory limitation on the working hours of these employees was the provision, originally made in the Shop Hours Regulation Act, 1886, and now embodied in the Shops Act, 1912, limiting the hours of young persons under 18 employed in shops to 74 a week, inclusive of meal-times. Other Acts, however, regulate the closing time of shops, either generally or in particular trades, and thereby indirectly limit to some extent the hours of shop assistants; they also require that meal intervals (half an hour for tea, and three quarters of an hour for lunch if taken on the premises, or one hour if it is not) should be allowed, and require the provision of seats for female shop assistants. The employment of children of school age, between 12 and 14, is often regulated by local by-laws; such children are usually employed for the delivery of newspapers and milk in the morning and evening.

The Report also deals with the present position in foreign countries and in the British Dominions.

The Report then deals, in detail, with the present hours of employment in the distributive trades in this country, distinguishing

normal hours of work; overtime; juvenile employment; and the hours worked by women. Details are given of the long hours worked in many shops; a working week of over 60 hours was found to be quite common. The probable effects of a 48-hour week on wages, employment, and prices are considered; also its effects on the organisation of work in shops, and the methods of its application to various kinds of trade. Another section of the Report deals with the health and welfare of shop assistants, under such headings as statistics of mortality, and general condition of health; provision of seats; heating, lighting, and ventilation; meal intervals, etc.

### Recommendations

The general conclusions reached by the Committee are summarized in the *Ministry of Labour Gazette* as follows:—

The normal hours of employment of all shop assistants (with a few exceptions, stated in the Report) should be limited to 48 per week; "hours of employment" being defined as the time during which the employee is at the disposal of the employer, excluding the statutory intervals for meals.

In trades where there is a reasonable demand for hours in excess of 48 per week, a fixed amount of overtime should be allowed throughout the trade; this overtime should be paid for at not less than time-and-a-quarter. The prim-

any decision as to the trades in which overtime should be allowed, and its amount, should be placed in the hands of the Local and National Advisory Boards referred to below.

Each local authority responsible for the administration of the Shops Act should appoint a Local Advisory Board, consisting of equal numbers of representatives of employers and employed, under a chairman appointed by the local authority. The duties of Local Advisory Boards should be to make recommendations to local authorities on all matters connected with the administration of shops legislation, or upon any matters of a local character affecting the distributive trades.

The Home Secretary and the Secretary of State for Scotland should set up a National Advisory Board in each country, consisting of equal numbers of employers and employed. The duties of the National Advisory Boards should be:—(a) to advise and make recommendations to the Secretary of State on any matters connected with the administration of the Shops Acts, or affecting shops or shop assistants, and any matters referred to them by Local Advisory Boards; (b) to endeavour to promote uniformity of conditions, so far as may be practicable, in areas of similar type; (c) to advise the Secretary of State on pro-

visional Orders of local authorities in all cases where there is disagreement between the local representatives of employers and employed.

Provisions similar to those in the Factory and Workshop Act, 1901, which deal with conditions relating to health and welfare, and powers of inspectors, should be extended to shops and warehouses. Also, to overcome the prevailing encouragement of disuse of the seats provided for assistants, notices should be posted in every shop stating that the seats are intended to be used whenever possible.

The Committee insist strongly on the need for strict enforcement of the Early Closing Acts, also of the provisions regarding the statutory meal times of shop assistants, and half-holiday regulations. They believe, indeed, that the time has come for a still further limitation of the hours during which shops may be open; and they would like to see the Shops Act, 1912, amended so as to enable local authorities to make closing orders for an earlier hour than 7 p.m. They support the movement for the enforced Sunday closing of shops, and consider that a stricter statutory regulation of street trading is necessary. Legislation for special groups of workers, such as juveniles, errand boys and girls, etc., is, in their opinion, desirable in some cases.

### Estimate of Mineral Production of Canada in 1931

**O**WING to the drastic reduction in metal prices and on account of a lessened demand for non-metallic minerals and structural materials, the total value of the mineral production of Canada in 1931 amounted to \$227,769,000 as against \$279,873,578, in 1930, according to a report just issued by the Dominion Bureau of Statistics.

Gold production, however, stimulated by lower commodity prices and the present exchange situation, increased 27·5 per cent over 1930 and assisted materially in offsetting the loss occasioned by the general drop in metal prices. Metals as a group were valued at \$116,431,000 as against \$142,743,764 in 1930. Fuels, consisting of coal, natural gas, and crude petroleum totalled \$55,531,000 a decline of 18 per cent from the previous year. Other non-metallics including asbestos, gypsum, salt, feldspar, magnesite, sodium sulphate and many minor minerals were valued at \$10,958,000 as compared with \$15,217,864 in 1930. Structural materials such as cement, lime, stone, sand and gravel, and the various clay products totalled \$44,849,000, a decrease of 16·5 per cent from the preceding twelve months.

Canada's sixteen leading mineral products representing 98 per cent of the total mineral production in 1931 were as follows: gold, \$55,395,000; coal, \$41,320,000; copper, \$23,772,000; sand and gravel and stone, \$17,470,000; cement, \$15,722,000; nickel, \$14,697,000; natural gas, \$9,645,000; clay products, \$8,626,000; lead, \$7,241,000; zinc, \$6,019,000; silver, \$5,984,000; asbestos, \$4,611,000; petroleum, \$4,566,000; lime, \$3,031,000; salt, \$2,315,000; gypsum, \$2,018,000.

The American Federation of Labour announces that opposition will be offered to the passage of a measure now before the United States Congress which would define "vagrants" as being "persons over the age of seventeen years who have not sufficient means to maintain themselves or their families, who live idle and without employment, and who are able to work and refuse to work." The Federation claims that while such a law might be of use in the war against bootleggers and gamblers, it might also be used against strikers and unemployed persons, and was in conflict with the principle that accused persons are presumed to be innocent until they are proved guilty.

## NOTES ON INDUSTRIAL SAFETY AND HEALTH

### Accident Compensation for Relief Workers in British Columbia

The position of workmen employed in relief work in British Columbia in regard to compensation for industrial accidents was stated recently by the Hon. W. A. McKenzie, provincial Minister of Labour and chairman of the unemployment committee of the provincial cabinet. Such employees, he said, are covered by the provisions of the Workmen's Compensation Act of the Province, and deductions are made from their subsistence allowances at the rate of 1 cent a day towards the cost of medical aid.

Mr. McKenzie pointed out further that the receipt of workmen's compensation benefits was not in itself a barrier to assistance in relief matters, and that each individual case was treated on its merits.

Under the act, the Workmen's Compensation Board has no authority to increase the payment of 62½ per cent of the allowance received by the worker in such cases. This, in the case of a man on relief work on a provincial undertaking, applies only on the \$2 a day subsistence allowance he receives for this work. When injured on relief work, the applicant will receive the usual ration of earnings lost, and in necessitous cases will also receive whatever further aid is necessary for himself and his family by means of direct relief.

Mr. McKenzie explained that the Government had set up no hard and fast rule in such cases, but treated each on its own merits. Similarly, where the allowance in respect to dependants of a wage-earner employed on relief work is found to be insufficient for the reasonable sustenance of his family, direct relief has also been resorted to to take care of the situation.

The Minister of Labour emphasized the point that such cases are liberally construed by the Government when the facts showed the proper allowances under all heads are not sufficient to meet the actual needs in the case. A man could be held to be destitute though in receipt of a compensation allowance, while his family remained in real need of the actual necessities of life. Such cases have been met and adjusted by direct relief payments.

### Value of Safety Work under Compensation Act

The importance of the work of accident prevention and first aid which is now in general use under the supervision of the Workmen's Compensation Board of British

Columbia was described in a recent address by Dr. C. H. Bastin, medical officer of the Provincial Board. The percentage of the incidence of accidents, he said, had been enormously reduced, and the causes of accidents had been eliminated to a marked degree, especially the mechanical causes, which had been largely removed by the requirement of safety devices, and by careful study of all accidents with a view to preventing the occurrence of similar accidents.

On the same occasion Mr. Percy Abell, manager of the British Columbia Safety League, paid a tribute to the Board's efforts on behalf of safety, and stated that less than half of the fatalities in the province occur in industrial undertakings.

### Health Unit in Saskatchewan

The duties of a public health nurse in a health unit were outlined in the *Canadian Public Health Journal*, October, 1931, in an article by Miss K. Rowley, Registered Nurse, of Health Unit No. 1, Saskatchewan. For the past two years Saskatchewan has had a full-time health unit, which covers a rural territory with a population of approximately 25,000 people. The unit does pre-natal work through home visits and a clinic, sends out literature on infant care, conducts child-welfare conferences, inspects the school children and conducts immunization clinics, gives instruction in home nursing, and does various other kinds of health work. As evidence of what it has accomplished in the past two years, the writer quotes figures showing that in 1930 the maternal mortality rate in the territory served by the unit was only 2.3 per 1,000 live births as compared with a rate of 6.2 for the Province as a whole, while the infant mortality rate was 60 as compared with 73.5 for the Province.

### Safety Trophy in Quebec

The Province of Quebec Safety League is offering for the second year a trophy to be awarded to the plant with the best safety record. Last year the trophy was won by the Steel Company of Canada. At the beginning of December, twenty firms had already entered the new competition. Mr. St. Clair Holland, in a recent address at Montreal, stated that the figures for the first month of the competition showed that several firms with over 100,000 man-hours had not had a single accident. The formula used for compiling the "accident-frequency" record, he said, consisted in multiplying the number of accidents by

one million and dividing this figure by the total number of man-hours worked. He noted the remarkable interest shown by the competing firms, everything possible being done to prevent and avoid accidents; the employees were being taught accident prevention, and safety was being preached and practised in every direction. It was also noted that the employees of a great number of firms in the competition were taking an interest in the contest, several heads of firms having reported to the league that their employees wanted more information and that there was a generally increased demand for safety posters.

#### **Sweepstake to Promote Industrial Safety**

The Alberni-Pacific Lumber Company, of Port Alberni, British Columbia, has adopted the following plan of accident prevention: Once a month a sum of \$75 is deposited by the company with a committee of day workers and \$50 with a similar committee on the night shift. The day side gets more because the staff is larger. If the day side ends the month with no accidents at all, one worker, first prize winner, gets \$45, a second \$20, and a third \$10. The night side divides its \$50 in proportion. The matter is decided by the method of drawing numbers from a box. If there is one accident on the day shift in the month, the prize money drops to \$50. If two accidents occur, only \$35 is available for prizes; if three the sweep is worth \$20; if more than three, there is nothing in the pool. The prizes on the night side are proportionately diminished according to number of accidents.

At least on one occasion the whole sum has been distributed. Once the chief first-aid man obtained the first prize. The scheme was originated by Mr. Ross Pendleton, manager of the mill, and is reported as having had a noticeable effect in reducing the average of accidents after several months operation.

#### **State Certificates for Outstanding Safety Records**

The Pennsylvania Department of Labour and Industry has presented certificates, suitable for framing, to industries which had outstanding safety records for the past year. A Certificate of Honour is given for a perfect safety record, and a Certificate of Merit for one over the average for the State as a whole. Both forms bear the embossed gold seal of the Commonwealth of Pennsylvania and the signatures of the Secretary of Labour and Industry, and the Supervising Inspector in whose division the establishment is located. Provision is made for recording on the certi-

cate the name of the concern that receives the award. An additional line is provided so that these awards may be made to departments of large establishments in case the establishment as a whole may not be entitled to a certificate but a department is.

#### **Industrial Hygiene in Australia**

The Royal Commission on Health appointed by the Government of the Commonwealth of Australia to inquire into and report upon public health as a matter for legislation and administration by the Commonwealth, in conjunction with the States where necessary, made the following recommendations in regard to industrial hygiene:—

(1) That the work of the Division of Industrial Hygiene in the Commonwealth Department of Health should be extended in the following directions: (a) The publication of Service Reports and information; (b) the collection of data on mortality and morbidity; (c) the encouragement of the organization of industrial welfare services, medical, dental, and nursing, among industrial companies or firms; (d) the encouragement of routine medical examination of employees; (e) the organization of uniform methods of records by industrial establishments; (f) assisting State Health Industrial Authorities and other bodies in investigations and inquiries into problems or difficulties in connection with Industrial Hygiene.

(2) That provision should be made at Universities for the teaching and training of medical practitioners in industrial medical work.

(3) That a physical survey of individuals engaged in various industries should be made for the purpose of establishing Australian standards of health, and that this should be carried out, under the control of the Commonwealth Department of Health, by a trained staff including an expert physiologist.

(4) That the periodical conferences between Commonwealth and State officials with representatives of Labour and Factory Departments should be continued for the purposes of insuring uniformity with respect to records and further action on various other subjects of industrial hygiene.

#### **Accidents in British Coal Mines**

A conference on safety in mines was held at Manchester early in December, when consideration was given to the opinion of mine inspectors, colliery owners, officials and workers. Similar conferences are being held at Newcastle-on-Tyne, Glasgow, Sheffield and Cardiff.

Sir Henry Walker, Chief Inspector of Mines, who spoke on "Ways and Means for Increasing Safety in Mines," quoted statistics of deaths and accidents in mines in the Lancashire and North Wales coalfields, and pointed out the lessons which the facts suggested. During the four years 1927 to 1930 inclusive, he said, 81, 76, 83, and 78 per cent respectively of all fatal and serious accidents occurring underground in the mines of the area were due to causes other than explosions—mainly falls. Those percentages showed that, though there had been some improvement in regard to falls when the statistics were examined over a period of 30 years, yet when the recent combined death and injury rates were compared with the corresponding rates for the years 1901-1910 there was really very little ground for satisfaction regarding falls. As to accidents in connection with haulage, no progress at all towards greater safety had been made. The death and injury rate for explosions was only one-forty-sixth of the rate in respect of falls, but it was one-twenty-fifth of that in respect of haulage. Accidents in falls and haulage were to-day and always had been, responsible for the great majority of the casualties to life and limb. Even in the decade 1901-1910, which included the two great explosions in Lancashire, at the Maypole

and the Hulton collieries, the number killed by falls and haulage accidents was eight times the number killed by explosion (75 and 344), or over 3,300 in the 10 years. In the next two decades such accidents caused death and injury in cases 108 times and 50 times as numerous respectively as explosions did. It was the day-to-day accidents that caused by far the greater number of fatalities in coal mines.

Referring to recent disasters that had resulted from explosions of gas, he expressed the opinion that given proper attention to ventilation and stone-dusting, they might hope that disasters of that character, sweeping throughout the mine, were things of the past. But it was necessary to make absolutely certain that the incombustible dust used was of such a character that it would rise into the air as easily as coal dust—in other words, that the stone dust used would not cake by moisture. Working faces must be kept open. A heavy fall on the face or on the roadway might block the ventilation and so allow gas to accumulate. They must have adequate and proper support for the roof and sides, and such support was equally necessary to prevent accidents from falls and to provide the men with favourable conditions for carrying on haulage operations.

### Regulations Concerning the Safety of Labour in Mines in Quebec

By an order in Council of the Province of Quebec, dated December 4, 1931, the following new safety regulations were issued under the Mining Act, respecting the sanitary conditions and safety of works in mines. The regulations are made "in view of the numerous fatal accidents and other serious accidents which happen in open cast workings."

#### OPEN CAST WORKINGS

(1) The following regulations apply to what is known as open cast mining and quarrying operations and glory hole pit workings.

(2) The use of derrick as means for the conveying of men is prohibited, except in the case of accidents to persons and other serious emergencies.

(3) The operator shall build and maintain in good order travelways on pit faces for the workmen, and, where necessary, shall provide ladders or stairways. Ladders and stairways having a slope in excess of forty-five degrees (45°) from the horizontal shall have landings at every thirty (30) feet or less, unless otherwise authorized or prescribed in writing by the Inspector of Mines. Each stairway shall have handrails and shall be substantially constructed and maintained in good repair. In ladders, the rungs shall be regularly spaced at no more than twelve inches centre to centre, and shall not be in any case less than four inches from

the wall. Every ladder shall be extended three feet above each landing, unless strong handholds are provided.

The use of wire ropes on travelways, on pit faces is prohibited.

(4) Unless otherwise authorized in writing by the Inspector of Mines, the rock surfaces around the edge of all pit faces shall be stripped over a width of six feet of all unconsolidated material, such as: clay, earth, sand and gravel. Beyond this strip, the overburden shall be sloped to the natural angle of repose.

(5) No person shall be permitted to do any work near a pit-wall face until such wall has been examined by the foreman in charge of the crew. If found unsafe, he shall have removed all hazards before permitting any other work.

(6) It shall be the duty of each man engaged in work on the walls of a pit at such operations as: barring loose material, scaling and cleaning, to continually wear a life-line. This life-line shall be snubbed to a solid anchor above the working place, and be under the constant supervision of a snub-tender.

The operator of any open cast workings shall provide and maintain a sufficient number of life-lines for the use of all workmen, employed above the floor of the pit or quarry.

(7) When a load is being hoisted or lowered, the signal-man shall notify all persons in the vicinity to retire to a place of safety until it has cleared the danger zone.

(8) An effective block, automatic derail or a safety switch shall be provided at the top of each inclined plane to prevent cars from accidentally running down. At a safe point near the bottom, a sharp curve, a blind-end switch or an automatic or similarly effective derail shall be provided to stop the runaway cars.

(9) In sand and gravel and other workings in unconsolidated material, the method of mining by undercutting is forbidden. No vertical working face shall have a height of more than ten feet; where the thickness of material to be excavated exceeds ten feet, the work shall be done in benches or at an angle of safety. This

rule shall not apply to pits where the material is excavated and loaded solely by mechanical means.

(10) Unless otherwise authorized in writing by the Inspector of Mines, all open cast, working over one hundred feet in depth shall be worked in benches of not more than sixty-five feet in height; the width of a bench shall exceed the height of the face above. Nothing, however, in this regulation, shall be construed, to prohibit leaving, at the conclusion of operations, the wall rock at an angle of sixty degrees with the horizontal. This rule does not apply to pits where the material is excavated and loaded solely by mechanical means.

## NOTES ON VOCATIONAL EDUCATION AND APPRENTICESHIP

### Kiwanis Club and Vocational Guidance

The President of the Kiwanis Club at Sydney, Nova Scotia, announces that during the coming year vocational guidance will be added to the activities of their club as a phase of children's work. "It is an attempt," the president states, "to help the youths attending school in their search for a vocation suitable for them. Many youths, when leaving school, do not know what vocation they would like to follow, the result being that they accept the first position they can find, irrespective of the fact that they may not be interested in it, or they fail to see that the future prospects for advancement are very limited. We do not know just how much we can do to help them, but it is a field that has immense possibilities. The more experience we have in the work the greater will be the aid we can give to the youths."

### Premier of Saskatchewan Opens Trade School at Moose Jaw

Premier J. T. M. Anderson, Minister of Education for the Province of Saskatchewan on December 12, 1931, officially opened the new Technical High School at Moose Jaw. The formal opening was held in the auditorium of the new school. Governmental, educational and civic authorities were represented at the ceremony which was attended by almost 3,000 citizens. Premier Anderson, stressed the need of having agriculture included as one of the future main courses of study in connection with the technical schools of the province.

The cost of the erection of the school was approximately \$425,000.

### Hon. C. J. Arcand urges attendance of Unemployed at Technical Schools

The Hon. C. J. Arcand, Quebec's first Minister of Labour, when addressing a meeting recently held in the Montreal Reform Club, urged employers to co-operate with the Government in the measures adopted to reduce unemployment, and suggested that the unemployed, whenever possible, should go to the province's technical schools to specialize in a technical trade, which would better their position when prosperity returns.

The Minister cited the fact that in Germany to-day technical school attendance figures had risen in proportion to the increase in unemployment. This means he declared, that young Germany, refusing to be dismayed by temporary hardships, is seeking greater knowledge of trade, and looking forward to the future with courage.

### Apprenticeship Classes in Ontario

Mr. J. Clark Reilly, manager, Canadian Construction Association, recently addressed the Lions' Club, Ottawa, the subject of his address being the Apprenticeship Classes of the Technical Schools. "Before the war," he said, "the majority of the skilled workers in Canada were Old Country men, but since the war these workers ceased coming here in such numbers, and the leaders in industry realized that the youth of Canada must be trained. The apprentice classes now did that training even more efficiently than had been hoped for and steps were still being taken to improve the standard. Eight or nine trades might now be learned at the apprentice classes in Hamilton, Windsor, Toronto and Ottawa." Mr. Reilly pointed out that the expense of such classes was paid for by industry in the form of a special levy.

## Regulations Governing Trade Schools in Alberta

The provisions of the Trade Schools Regulation Act which was passed by the Legislature of Alberta at its last session were outlined in the *LABOUR GAZETTE*, June, 1931, page 649. Regulations under the Act were recently published and became effective as from November 15, 1931. These regulations are as follows:—

1. No person who carries on, keeps, or operates a trade school within the meaning of the Act, shall publish or make use of any advertisement of any kind whatsoever unless such advertisement has been approved by the Minister.

2. No person who carries on, keeps, or operates a trade school shall advertise such school by means of radio broadcasting, unless such advertisement is in writing, and has been approved by the Minister, and nothing shall be added to or detracted from any such advertisement whilst the same is being broadcasted.

3. Every trade school shall be provided with sufficient equipment to the satisfaction of the Minister for the purpose of efficiently teaching any trade taught at such trade school.

4. Every person who carries on, keeps, or operates a trade school shall, before commencing to teach any trade, submit to the Minister for his approval an outline of the course of tuition for such trade, and shall not proceed to teach any trade until the course in respect of it has been approved, and shall not depart from the course approved by the Minister, without his consent in writing first had and obtained.

5. In the case of barbering, hairdressing, and beauty culture, the course of tuition shall not be less than six hours per day, thirty-six hours per week for twenty-six weeks, in a period of not more than thirty-five weeks; the course for tuition in electric and acetylene welding shall not be less than six hours per day, thirty-six hours per week for thirty-nine weeks in a period of not more than fifty-two weeks; and the course of tuition for automobile and tractor mechanics shall not be less than six hours per day, thirty-six hours per week for fifty-two weeks in a period of not more than sixty-five weeks.

6. No instructor shall be employed at any trade school unless he has been approved by the Minister, and such approval shall not be given unless the instructor satisfies the Minister that he has had at least four years' practical experience in the trade which he proposes to teach.

7. No person shall give instruction in any trade school in any trade unless he has been approved by the Minister, as a person fit to give instruction in such trade.

8. No trade shall be taught, and no instruction in any trade shall be given, in any trade school unless with the approval of the Minister in writing first had and obtained.

9. The fees to be payable on every application for registration under the Act shall be as follows: In case one trade only is to be taught, twenty-five dollars. If more than one trade is to be taught, twenty-five dollars in respect of one such trade and ten dollars in respect of each additional trade.

## REVISED ANNUITY PLAN OF IMPERIAL OIL LIMITED

A SUMMARY of the employees' benefit plans of Imperial Oil Limited was given in the *LABOUR GAZETTE* for April, 1925, page 347. In the December issue of the *Imperial Oil Review* the company announces important revisions in its Annuities and Benefits Plan for all employees both in the main organization and its subsidiaries. The basis of annuity payment in the revised plan, which becomes effective January 1, 1932, is as follows:

For employees in the service on December 31, 1931, and who remain in the service until retirement, the company will pay for each year of service prior to January 1, 1932, an annuity on the basis of two per cent of the average annual pay during the last five years of service as under the former plan. For all employees, as to service rendered after January 1, 1932, the company will pay for each year of service an annuity on the basis of one per cent of the average annual pay during the last five years of service. Employees are permitted to build this one per cent annuity up to two per cent by voluntary contributions of approximately one-half of the

expense required, the remainder being paid by the company.

The \$300 minimum provided for by the former plan for life allowances is retained, but will apply only to that portion of the annuity wholly paid for by the company.

Credits for which annuities will be paid are limited to 37½ years service as in the former plan. Employees are eligible to participate in building up supplemental annuities for themselves on or after January 1, 1932, if they have at least one year but less than 37½ years of service to their credit.

Employees who are in the service on December 31, 1931, and who enter the plan without delay get the benefit of a special contribution rate of three per cent of their earnings. If they do not enter the plan at once they will become subject to the rates of contribution fixed for employees who enter the service on and after January 1, 1932. These rates range from 3½ to 5 per cent of earnings, depending upon the age at which an employee begins participation. The rate of contribution by an employee remains the same during the

entire term of service unless he withdraws from the plan, in which case, if he joins it again, he will pay the rate called for by his age under the rules at the time of re-entry; or unless further actuarial studies show that the rates need to be either raised or lowered in order to bring them into harmony with the scale of annuity payments. If general changes of this kind are found necessary they will not be made oftener than once in five years and will not be retroactive.

Contributions will be made by deductions from the pay-roll upon voluntary authorization by employees.

The normal age for retirement is 65 years for a man and 50 years for a woman, and the normal service requirement is 20 years. In special circumstances, including permanent and total disability, employees with less than the normal age and service requirements may be granted regular or special annuities.

Provision is made that, in event of an employee either withdrawing from the plan or leaving the service, contributions will be repaid with interest at 3 per cent.

If an employee dies before becoming eligible for retirement, his contribution with compound interest at 3 per cent will be paid to his beneficiary or the estate.

## RECENT LABOUR UNION ACTIVITIES

### New Year's Message of President Tom Moore

Mr. Tom Moore, president of the Trades and Labour Congress of Canada, in a New Year's message on January 1, pointed out that the resources of Canada and the vigour and technical skill of its workers must bring the depression to an end ultimately. However, he continued, "drastic changes, especially in respect to reduction of working hours, are essential, if opportunity of employment is to be made available for all willing and capable of earning their own living. The increased productivity of machinery, mergers, and efficiency methods are bringing about constant reductions of staff and must be met to a considerable extent by reduced working hours. Wage rates and salaries must also be kept at the highest possible level in order to maintain purchasing power at the peak. Mass production can only be met successfully by mass consumption and as each country tends to become more self contained, shutting out to the greatest extent the products of other countries which can be grown or produced within its own borders, it becomes more and more essential to cultivate the home market and raise purchasing power to the highest possible level."

### Cigar Makers' International Union of America

On November 9, 1931, the Cigar Makers' International Union of America opened its twenty-seventh convention in Oriole Hall, Buffalo, N.Y., with over one hundred delegates in attendance.

President I. M. Ornburn, after reviewing briefly the activities of the union since taking office in January, 1927, stated that "the out-

standing paramount issue confronting labour and society as a whole, is to increase wages to a point that will enable consumption to balance with production." The president pointed out that the changed conditions brought about by the rapid introduction of improved machinery and methods of production and distribution have created a situation that challenges man's ingenuity, patriotism, and sense of justice. He referred to the establishing of the Cigar Makers' Co-operative Association, which has for its purpose the growing, packing, purchasing and selling of leaf tobacco and the manufacture and sale of all tobacco products, including labels, boxes, advertising matter, and everything pertaining to the manufacture and sale of tobacco products. The Samuel Gompers' label has been secured for the use of this association. The president also reviewed the steps taken to organized labour's national committee for the modification of the Volstead Act.

The delegates were informed that the International Union was in a sound financial condition, having \$160,665.36 of a balance in the general fund as at September 30, 1931.

A report was presented in connection with the trouble at Wheeling, W. Va., where it was alleged that communist agitators had succeeded in having stogie makers and strippers withdraw from the International Union. A telegram was read from Earl T. Huggins, of Wheeling, asking that he be granted the privilege of explaining the situation on the floor of the convention. This request was refused, and later the delegates unanimously adopted a resolution condemning the action of these communist agents, denying them the privilege of spreading their propaganda in the convention or in any local meeting of the

Cigar Makers' International Union, and requesting all trade unionists of America to refuse recognition to the dual organization, as by so doing "they are lending aid and support to the enemy of the working class."

A detailed account of the preliminary steps taken in connection with the organization of the Cigar Makers' Co-operative Association was presented to the convention, as well as a short account of the All-America Co-operative Movement, and of the Co-operative Alliance of the World, of which the former is an affiliate.

Resolutions were adopted as follows:—

Instructing the international executive board to present to the next convention a concrete plan providing for unemployment security;

Pledging support to the plans for the definite formation, operation and success of the Cigar Makers' Co-operative Association;

Authorizing the president to employ such means as are deemed best to defeat the proposed Sales Tax Act in Congress and in the State Legislatures;

Pledging moral and financial support to the movement for the modification of the Volstead Act;

Authorizing the withholding of the union label from any manufacturer who advertises in any manner derogatory to the members of the International Union;

Approving the United States Employment Service as now conducted, and advising the members to co-operate therewith, and calling upon Congress to provide ample funds for its continued operation.

Officers elected were: President, I. M. Ornburn, 604 Carpenters' Bldg., Washington, D.C.; First vice-president, F. A. Grube, New Haven, Conn.; Second vice-president, Manuel Gonzales, Tampa, Fla.; Third vice-president, A. Garipey, Montreal, Que.; Fourth vice-president, E. G. Hall, Minneapolis, Minn.; Fifth vice-president, R. E. Van Horn, Washington, D.C.; Sixth vice-president, James Sheehan, Milwaukee, Wis.; Seventh vice-president, William Brandt, St. Louis, Mo.

Delegates to the next convention of the American Federation of Labour are, I. M. Ornburn (president) and G. W. Perkins, (past president).

The 1933 convention will be held at Washington, D.C.

[Note.—Late in December, 1931, President Hoover appointed I. M. Ornburn a member of the United States Federal Tariff Commission.]

## A.F. of L. Invited to Join Movement for International Action

A meeting of the Executive Committee of the International Federation of Trade Unions was held in Berlin in November under the presidency of Mr. W. M. Citrine (Great Britain), the economic situation being the principal subject of discussion. The committee discussed the possibility of international action with the object of establishing the forty-hour working week and also the program proposed by the Director of the International Labour Office, Mr. Albert Thomas, to carry out large-scale international public works. Attention was also devoted to the activities of the Franco-German Economic Committee.

The Executive Committee decided to request the national centres affiliated to the International Federation to furnish information on the measures they have already accomplished with the object of combating the economic crisis and to institute the 40-hour working week. The national federations are also to be requested to exercise pressure on the various Governments to secure with the aid of Government representatives the discussion at Geneva of the question of the international establishment of the 40-hour working week, even if exceptional procedure should be necessary for this purpose. The Labour and Socialist International is to be requested to approach its affiliated national organization on the same lines.

The Executive Committee approved the proposal for the carrying out of international public works. It was reported that a committee consisting of economic and financial experts from the various countries was to be convened for the full discussion of various plans and the possibilities of financing them. The committee would also consider the money and credit crisis and the various solutions which have been proposed to meet it.

The Executive Committee unanimously emphasized the necessity for trade union unity of opinion and joint action with the object of surmounting the economic crisis. It therefore decided to telegraph immediately to the American Federation of Labour inviting it to participate in an International Trade Union Conference with the object of making preparations for joint trade action.

## Trade Union Organization in Soviet Russia

At the fifth plenary meeting of the General Council of Trade Unions of the Soviet Union, held in January, 1931, it was decided to set up "production sections" in the principal trade unions. The president of the

General Council was instructed to organize the work of the sections, and accordingly on September 15, 1931, he issued an order embodying detailed provision on the subject. This Order stipulates that the right to form production sections shall be in the hands of the general meeting of each trade union, subject to ratification by the General Council of Trade Unions. The sections will include all trade unionists employed in the same branch of industry. Their main objects will be to develop the socialistic aspects of labour (socialistic competition, advance guards), and to support proposals put forward by the wage earners in connection with the organization and rationalisation of labour. They will also take part in the regulation of wages, by opposing all tendencies towards equalization and promoting the application of piece-rates. The improvement of the workers' social and cultural conditions also falls within the competence of the sections.

The supreme authority of the production sections of a given industrial branch is the All-Russian Production Conference which meets at least once a year. Similar conferences will also be convened at least twice a year in

the various Federal Republics, regions and districts. Production section offices will be attached to the Central Committees of trade unions and to the trade union committees in the Republics, regions and districts. These offices will comprise five to eleven members elected by the production conferences; persons elected must be confirmed in office by the chairman of the trade union organization to which the office is attached. As a rule, members of such offices will be appointed for the same period as the members of the corresponding trade union body, but an office personnel may be reorganized if the majority of the members have changed their trade or when at least two-thirds of the members of the union concerned demand it. The higher trade union authority may, moreover, require new elections to be held before the expiry of the period for which members of an office were elected.

The Central Committee of each trade union will draw up a list of trade union bodies to which production section offices are to be attached. As a rule such offices will not be attached to factory committees, except in the building industry.

## THE FISHING INDUSTRY IN CANADA IN 1930

THE annual report on the Fisheries Statistics of Canada, 1930, prepared by the Dominion Bureau of Statistics in collaboration with Dominion and Provincial Fisheries Departments, shows that the production of the fisheries of Canada in that year, including fresh, domestically prepared or factory made products, reached a total value of \$47,804,216. A prefatory review of the early history of Canadian fisheries outlines the development of this industry in North America from about the year 1500, evidence being cited that cod fishing flourished on the banks of Newfoundland at a much earlier date. The report describes the Canadian fishing grounds as being the most extensive in the world, the quality of the products being also of the first rank. In the latter respect the report states: "It is an axiom among authorities that food fishes improve in proportion to the purity and coldness of the waters in which they are taken. Judged by this standard, the Canadian cod, halibut, mackerel, whitefish, and salmon are the peer of any in the world. It is possible, therefore, to state that by far the most valuable fisheries of the western hemisphere, if not of the globe, belong to Canada."

As previously stated, fisheries operations in the calendar year 1930 resulted in a produc-

tion that had a marketed value of \$47,804,216, or approximately \$5,714,000 less than in 1929. Landings were also smaller than in 1929 in each of the three divisions of the fisheries—Atlantic Coast Fisheries, Inland Fisheries, and Pacific Coast Fisheries, while for the Dominion as a whole the catch showed a decrease of approximately 53,000,000 pounds. This decrease is explained by the unsettled and depressed conditions prevailing in most of the markets where Canada's fisheries are sold. Price levels declined and the industry had to face very many adverse marketing conditions.

As compared with the returns for 1929 there were decreases in the marketed value of the fisheries production in all the provinces. The sea fisheries output for the year had a marketed value of \$41,451,977, but in the preceding year the total had been \$44,928,742. The inland fisheries production \$6,352,239, was smaller by over \$2,237,000 than it had been in 1929. British Columbia continued first among the provinces in point of value of fisheries output, and accounted for about forty-eight per cent of the production value for the Dominion, as compared with thirty-four per cent in the case of the Maritime provinces, seven per cent for Ontario, five per cent for Quebec, and four

per cent for the Prairie Provinces and the Yukon Territory combined.

*Capital Investment and Personnel.*—Notwithstanding that the fishing industry, in common with other industries, was seriously affected during the year by unfavourable general economic conditions, a substantial increase was made in the capital investment, which reached a new high level. In 1929 the investment amounted to \$62,579,444, but by the end of 1930 this sum had increased by over \$2,000,000 and the capital in the industry amounted in all to \$64,026,297. There was a decrease in 1930 of something more than \$700,000 in the investment in vessels and boats and gear used in the primary operations of catching and landing fish, which amounted to \$33,198,690, but this was more than offset by an increase in the money invested in canneries and fish curing establishments, which reached a total of \$30,827,607.

During the year the number of persons directly engaged in the industry was 79,558, or 892 less than in the preceding year. The personnel employed in the primary operations numbered 63,836 as compared with 64,083 in 1929. In fish canning and curing establishments 15,722 persons were at work, or 645 less than in the year before.

The employees in primary operations are classified in two groups—sea fisheries and inland fisheries and according to the method of fishing. In 1930 the number of employees in deep sea fishing were: on steam trawlers, 142; on vessels, 6,745; on boats, 40,508; on carrying smacks and scows, 649, while those engaged in fishing, not in boats, was 2,837. Similarly in inland fisheries the number engaged in 1930 were: 658 on vessels; 7,514 on boats; 20 on carrying smacks and scows; and 4,763 not in boats.

*Major Fisheries.*—Dealing with major fisheries, the report points to the exceptional success of the salmon fishery. In the sea fisheries of both coasts greatly increased landings of salmon were made—over 229,600,000 pounds in British Columbia and nearly 6,500,000 pounds in the Atlantic provinces. New records were established in catches; and in marketed value, despite the unfavourable world conditions, the production of the fishery showed a value increase of \$2,700,000 over the figures for the preceding year and reached a total of \$17,697,655. The lobster fishery, which is carried on in Atlantic coast waters only, was again second only to the salmon fishery in point of marketed value return. An increased catch was made, but the lobster industry, like all others, was affected by the unsatisfactory market conditions, and despite the gain in landings the marketed value of the production

was about \$481,000 less than in 1929, amounting to \$5,214,643. The cod fishery ranked third in point of value, with a marketed return of \$4,288,813, as compared with \$5,394,636 in the preceding year. There was a large decrease in the marketed value of the halibut catch, which was only \$2,871,455, as compared with \$4,832,296 in 1929. In the herring fishery there was a smaller return, or \$2,623,174, as against \$3,186,669. Whitefish, the most valuable of the inland fishes, brought in \$1,818,941, but that amount was less by over \$600,000 than the marketed value for 1929.

### Fish Canning and Curing Establishments

The fish canning and curing industry is found only in the provinces bordering on the sea, the lobster and sardine canneries and most of the clam canneries being on the Atlantic coast, while British Columbia had 60 of the 68 salmon canneries in operation during 1930. The number of plants engaged in the canning and curing of fish in 1930 was 699, a decrease from the preceding year of 31 and a decrease from the year 1928 of 14. The lobster canning industry had the largest number of plants with a total of 333, followed by fish curing establishments with 23 and sardine and other fish canneries with 10. The canneries are classified according to the principal kind of fish canned, while the plants which prepare fish in other ways, as salted, smoked, boneless, etc., are classified as fish curing establishments.

*Employees, Salaries and Wages.*—There were 15,722 persons employed in the fish canning and curing establishments in 1930, classified as follows: salaried employees, 591; wage-earners, 9,967; and contract and piece-workers, 5,164. The employees classified as contract workers are found in the salmon canneries of British Columbia, where a large part of the work is done under contract, the contractor engaging and paying his own help and being himself paid by the cannery operator according to the quantity of fish packed. About 75 per cent of the workers in British Columbia salmon canneries are engaged under this arrangement.

The total of 15,722 persons employed in canning and curing establishments was divided as follows: lobster canneries, 5,609; salmon canneries, 5,844; clam canneries, 299; sardine and other fish canneries, 395; fish curing establishments, 3,120; reduction plants, 455.

The total amount paid to all employees in establishments during the year 1930 was \$5,326,463, of which the wage-earners received \$3,383,902, the contract and piece-workers, \$1,023,609, and the salaried employees, \$918,952. The total amount shows a decrease of \$85,392 from the preceding year.

The total number of days in operation by all establishments in 1930 was 71,789, or an average of 102.7 days per establishment. An arrangement of the establishments in groups according to the number of days operated during the year places 289 in the group of those operating for periods of less than 60 days; 182 in the group of those operating from 60 to 119 days; 103 in the group of those operating from 120 to 179 days; 58 in the group of those operating from 180 to 239 days; and 67 in the group of plants operating for periods of 240 days and over. Comprised in the last group are 9 lobster canneries, 4 salmon canneries, 1 clam cannery, 3 sardine and other fish canneries, 46 fish curing establishments, and 4 reduction plants.

The months of highest employment for wage-earners in the industry as a whole were May (9,176) and June (9,410), while the months of lowest employment were February (1,582) and March (2,050). In the lobster canneries, May and June record the largest number of employees; in the salmon canneries, May to September; in the sardine canneries, April to November; while the clam canneries, fish curing establishments and reduction plants operate nearly the whole year. In many of the lobster and salmon canneries, fish curing operations are carried on previous to and after the close of the season for canning.

A compilation on the basis of hours of work of employees in canning and curing plants indicate that out of 699 establishments, 3,682 employees worked 8 hours or less per day; 3,605 worked 9 hours or less; 5,527 worked 10 hours, while 491 worked over 10 hours per day.

### Fishing Bounty

Under the authority of "An Act to encourage the Development of the Sea Fisheries and the Building of Fishing Vessels" the sum of \$160,000 is appropriated annually by the Governor in Council. It is distributed under the name of Fishing Bounty by the Department of Fisheries amongst fishermen and fishing vessel and boat owners on the Atlantic coast, under regulations made from time to time by the Governor in Council.

For the year 1930, payment was made on the following basis: To owners of vessels entitled to receive bounty, \$1 per registered ton, payment to the owner of any one vessel not to exceed \$80; to vessel fishermen entitled to receive bounty \$7.50 each; to owners of boats measuring not less than 12 feet keel, \$1 per boat; to boat fishermen entitled to receive bounty, \$6.65 each.

There were 10,308 bounty claims paid. The total amount paid in 1930 was \$159,773.55 allocated as follows: to 546 vessels and their crews, \$39,447.60; to 9,741 boats and their crews, \$120,325.95.

## Co-operation in Agriculture and Fisheries in Great Britain in 1930

**P**ARTICULARS of British agricultural and fishery co-operative societies in 1930 are reproduced in the *Ministry of Labour Gazette*, December, 1931, from returns prepared by the Chief Registrar of Friendly Societies. The Societies are dealt with in three main groups: (1) Requirement Societies, whose principal function is to supply their members with seeds, manures, utensils or other requirements for the carrying on of agriculture; (2) Produce Societies, which are chiefly concerned with the marketing of members' produce; and (3) Service Societies, which supply members with some service connected with the industry of agriculture, e.g. threshing. Some societies deal both in requirements and produce. Usually societies fall readily into one of the three groups, but in exceptional cases, where a society undertakes the sale of produce and the supply of requirements to nearly the same extent, the decision which places it in one category or another is necessarily somewhat arbitrary.

The total membership of all the agricultural and fishing societies was 291,000, which was

approximately the same in 1929. Their share and loan capital and reserves (including the net aggregate of balances of profit and loss carried forward) amounted to £3,676,000, as against £3,680,000 in 1929. In general, agricultural co-operation, which showed signs of expansion during the war and immediate post-war years, has declined in recent years. Since the peak year 1920 there has been a decrease of 36 per cent in the number of trading societies and a reduction of 22 per cent in membership. Many agricultural and fishing societies, unable to obtain further working capital or credit, have found it necessary to wind up; in addition a number of industrial co-operative trading societies, after suffering heavy losses, have closed their auxiliary farming departments. In the Service societies there was up to 1923 a rapid growth of small holdings and allotments societies, but since that year there has been a reduction of nearly 15 per cent in the number of those societies, and of 18 per cent in the acreage under cultivation.

## LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

### Suggested Unemployment Palliatives

The Unemployment Committee of the Governing Body of the International Labour Office, consisting of four members chosen from each group (Governments, employers and workers) in the Governing Body, held a meeting in Geneva from 7-9 December, in order to discuss the unemployment situation, with special reference to the possibility of arriving at a better distribution of working hours by international agreements. The Committee approved a draft resolution for consideration by the Governing Body at its next Session.

The proposed resolution recognizes that the crisis can only be met by the adoption of economic, financial and political measures, and that such measures lie outside the scope of the work of the Organization. Several lines of action, however, are suggested for increasing employment, and the committee urged that the international action which has been undertaken with regard to public works should be hastened.

The committee considered that in present circumstances it was more than ever desirable that the international Conventions on hours of work, and in particular the Washington Convention on the eight-hour day, should be ratified, and that in any case, pending ratification, their principles should be, or continue to be, universally applied, so as to constitute a solid framework for all the arrangements contemplated.

Overtime work, it was suggested, should be abolished: in exceptional cases in which such action was impossible owing to technical difficulties, seasonal requirements, or the necessity to comply with a time limit in executing orders subject to a penalty for non-fulfilment, it should be reduced to a strict minimum.

The Committee recommended that whenever the technical conditions and the composition of the staff allowed, the hours of work of each worker should be diminished in preference to discharging workers. This diminution might be brought about by reducing either the number of hours per day, or, preferably, the number of days per week. It might also be achieved by a periodical rotation of workers over a period of weeks. The Committee drew attention to the measures taken in certain countries to facilitate this practice by using unemployment benefits, to be paid during the period of idleness. In spite of serious difficulties, which, however, it would seem possible to overcome, and subject to

technical, commercial and financial possibilities, the principle of diminishing temporarily the hours of work of each worker should be adopted in those undertakings which are working at normal capacity, so as to make it possible to engage unemployed workers in those undertakings. It appeared to the Committee that under the conditions of the present crisis the best results had been obtained by reducing the weekly working period to a figure approximately to 40 hours, distributed over the week by different methods, but preferably distributed equally over five days when the technical conditions allowed.

The Committee had a mandate at this session only to study arrangements of hours of work during the crisis. It took note, however, of the desires of the workers' organizations in favour of the 40-hour week, and also of the opinion formulated by certain industrial employers that when prosperity had been re-established a permanent reduction of hours of work might be possible in those industries in which technical progress had been considerable.

### Report on Invalidity, Old Age and Widows' and Orphans' Insurance

The International Labour Office has issued a report on the subject of invalidity, old-age and widows' and orphans' insurance, which forms the second item on the agenda of the Sixteenth Session of the International Labour Conference, to be held this year. The first item, it will be recalled, is the abolition of fee-charging employment agencies, and the third is the age of admission of children to employment in non-industrial occupations. While the last-mentioned item has already been considered on first discussion, and will be again considered next year on the second and decisive stage, the other questions have not yet passed through the initial stage of the double-discussion procedure. In accordance, therefore, with the rules of the Conference, the Office has prepared a preliminary report relating to each of the two items, in which it sets out the law and practice bearing on the subject in the different countries, and defines as completely as possible the points on which it is thought the Governments should be consulted before the second stage of the discussion. It will be for the Conference itself to decide, after a general discussion on the basis of each report, whether the matter is suitable to form the subject of a Draft Convention or Recommendation, and, if so,

on what detailed aspects of it the views of Governments should be elicited by a questionnaire in preparation for the final discussion.

The report on invalidity, old-age and widows' and orphans' insurance contains a comparative analysis of existing legislation relating to this branch of social insurance, whether compulsory or optional, comprehensive or restricted in scope, contributory or non-contributory in character. In turn, each of the principle aspects of such insurance—its scope, the risks covered and benefits granted, the financial resources, the financial organization, the administrative organization, the procedure for the settlement of disputes, the position of foreigners, and the provision for the maintenance of migrants' rights—is dealt with, the law and practice governing the national systems of a large number of countries being concisely described, and the points of resemblance and of difference being clearly indicated.

In all, as many as fifty varied and complex insurance schemes are analysed, and from the analysis are drawn a number of general conceptions and fundamental principles for the guidance of the Conference in considering the possibility of the treatment of the subject from the international standpoint.

### **New Zealand and the Convention on Marking of Weight on Heavy Packages**

The Prime Minister of New Zealand recently informed the International Labour Office that ratification of the Convention concerning the marking of the weight on heavy packages transported by vessels\* would involve considerable expenditure in many New Zealand ports upon the provision of weighing appliances. Under present financial conditions the New Zealand Government was not prepared to impose such expenditure on harbour authorities. The New Zealand Government had therefore, he stated, deferred consideration of the question. The letter added that no difficulty would arise concerning the major portion of New Zealand's outward cargo, wool, hemp, mutton, beef, butter, cheese, etc.

### **Australia and the Minimum Wage-Fixing Machinery Convention**

The Prime Minister of the Commonwealth of Australia recently informed the International Labour Office, in accordance with Article 421 of the Treaty of Versailles, that the local conditions in Papua, Norfolk Island and the mandated territories of New Guinea and Nauru were such as to render inapplicable to them the provisions of the Convention concerning the creation of minimum wage fixing machinery, which the Commonwealth Government has ratified, and that it was therefore not proposed at present to extend the application of the Convention to those territories.

\* The text of this Draft Convention was given in the *LABOUR GAZETTE*, July, 1929, page 766.

### **Control of Lumber Production in Wisconsin**

The State of Wisconsin recently concluded an agreement with the lumbermen of the State by which the latter agreed to maintain production of a fixed percentage of capacity in all their plants so as to avoid complete shut-downs. The *Monthly Labour Review*, of the United States Department of Labour, states that a committee, made up of seven representatives of the lumbermen and of five persons appointed with the approval of the States department of agriculture and markets, will superintend the carrying-out of the contract in such a way as to increase the production evenly throughout the industry if the demand warrants it. The agreement provides that for the period July 1, 1931, to July 1, 1932, the production of each plant will be set at 28 per cent of the annual average for 3-year period, 1927-1929, which were years of large production. In presenting the contract with the

lumbermen to the executive council, the governor stated that the agreement was a joint effort to stop the complete shutting down of plants and to create order out of the present disorganized methods of marketing and production.

The following Canadians are noted as serving on the various committees of the International Association of Industrial Accident Boards and Commissions: Executive—Geo. A. Kingston, Ontario; Statistics—Geo. A. Kingston, Ontario, and O. E. Sharpe, Quebec; Medical—Dr. D. E. Bell, Ontario, and Dr. M. D. Morrison, Nova Scotia; Safety and Safety Codes—R. B. Morley, Ontario; Rehabilitation—Fred W. Armstrong, Nova Scotia. The next convention of the organization is to be held at Columbus, Ohio, September 26-30, 1932.

## THE UNEMPLOYMENT AND FARM RELIEF ACT, 1931

### Employment Afforded

**D**ETAILS of employment afforded under the Dominion Unemployment and Farm Relief Act, up to December 31, 1931, as reported by the Provinces and Departments of the Dominion Government are shown in the following tabulation. Undertakings were started at various dates, but in no case previous to August 18, 1931.

#### REPORT OF EMPLOYMENT AFFORDED UNEMPLOYMENT AND FARM RELIEF ACT, 1931

Province, etc.	Number given employment to December 31	Man-Days (8 hrs.) worked to December 31
Prince Edward Island.....	1,086	6,611
Nova Scotia.....	30,137	334,397
New Brunswick.....	28,000	385,028
Quebec.....	24,152	253,574
Ontario.....	56,000	550,000
Manitoba.....	37,586	313,367
Saskatchewan.....	8,433	260,053
Alberta.....	32,214	390,913
British Columbia.....	31,894	868,712
<sup>2</sup> Federal Departments.....	15,128	236,075
Total.....	264,630	3,593,730

<sup>1</sup> Prince Edward Island figures are up to October 31, 1931. November and December reports not received.

<sup>2</sup> Figures for Federal Departments are incomplete.

In connection with sending men to employment at Government relief camps, arrangements have been made with the railway companies by which workers are sent to the camps free of transportation charge, the cost of transportation, based on a special rate, being divided equally between the Dominion Government and the Province concerned. Provision is made for return of men from camps at special rate payable by the worker. To December 31, approximately 6,863 men had taken advantage of this special rate.

The text of the Unemployment and Farm Relief Act, 1931, was given in the *LABOUR GAZETTE*, August, 1931, page 901, and the Regulations under the Act on page 904 in the same issue.

### Unemployment Relief Act, 1930

During the past year employment continued to be provided under the provisions of the Unemployment Relief Act, which was enacted at the special session of the Parliament of Canada in September, 1930, up to December 31, 1931. The number of individuals who obtained employment under this Act was 334,224, and the number of "man-days" work given reached a total of 7,410,404. (The provisions of the Act of 1930 were given in the *LABOUR GAZETTE*, September, 1930, page 1053.)

## COLONIZATION PLANS TO RELIEVE UNEMPLOYMENT IN CANADA

**T**HE Policy of encouraging colonization within Canada, instituted in September, 1930, by the Hon. W. A. Gordon, Minister of Immigration of Canada (*LABOUR GAZETTE*, June, 1931, page 626) and conducted in the form of a co-ordinated effort by the Department of Immigration and Colonization and the railway companies, has resulted in the return to the land of approximately 42,882 people, according to a statement made public early in December.

Detailed returns to November 30, 1931, show that a total of 6,040 families and 12,682 single men had been placed on farms since October 1, 1930, the former as settlers and the single men as farm labourers. This was done without direct financial aid to those assisted, the Department and the railways through their colonization systems finding the opportunities, bringing them before those who are in a position to take advantage of them, and facilitating their removal to their new homes. The object of this co-ordinated effort is to

encourage families and individuals who are unemployed or facing the prospect of unemployment, and who have agricultural experience, to return to the land before their funds become exhausted. The Department and the railways advise and direct them with respect to suitable locations, and with regard to the methods they should employ in order to minimize the possibility of failure. These organizations are continuing to devote their energies to this work in the knowledge that each person, and particularly each family, satisfactorily placed on the land on a self-supporting basis, is permanently removed from the ranks of the unemployed.

"It is gratifying that this policy of colonization has met with a tangible measure of success without resort to financial advances by the Government," the Hon. Mr. Gordon said: "experience has demonstrated that to start inexperienced people on a farm with heavy overhead indebtedness is too often the first step toward ultimate failure."

During the period from October 1, 1930, to November 30, 1931, the Department alone placed 948 families on the land and 5,502 single men in farm employment. During the same year the Canadian National Railways placed 2,860 families and 2,969 single men, while the Canadian Pacific Railway placed 2,232 families and 4,211 single men, making a total of 6,040 families and 12,682 single men. On the basis of five members to each family the report estimates 42,882 persons were placed on the land in this period.

Early in December the government of Manitoba submitted to the Dominion Government a further plan which called for joint contributions of 50 per cent from the Dominion, 25 per cent from the province and 25 per cent from the municipalities concerned, this plan to be carried out under the supervision of the federal Department of Immigration and Colonization with the co-operation of the Canadian National Railways colonization department, the Canadian National Land Settlement Association, the Canadian Pacific Railway immigration and colonization department, the Canada Colonization Association, and the Hudson's Bay Overseas Settlement, Limited. It was suggested that advances be made as required, up to a maximum, exclusive of the cost of land, not to exceed \$1,000 per family, to cover transportation and establishment of the family on farm, repairing buildings, sustenance for two years, purchase of stock, implements and seed. These proposals were considered at Ottawa, but the policy as outlined did not carry the judgment or approval of the federal authorities.

### Action by Various Provinces

In addition to this action by the Dominion Government, the various provinces have been also active in this work and with considerable success, particularly in Quebec, Ontario, and Saskatchewan. There again the railways placed the facilities of their colonization departments at the disposal of the Government authorities and co-operated in the work.

The Quebec government, as a measure for relieving unemployment, undertook last year to assist in placing a number of unemployed families on the land in suitable localities, providing them with such equipment as would enable them to maintain themselves during the winter. The provincial Department of Colonization, collaborating with the provincial Department of Agriculture, arranges for small grants for the purpose of land clearing and ploughing. A statement was issued in November that up to that time 23,000 persons, or 4,000 families from towns and cities in the province, had been placed in colonization districts. At the same time a colonization com-

pany was organized at Montreal, at the suggestion of Mgr. Gauthier, coadjutor-archbishop of Montreal, to further the movement of unemployed persons back to the land.

In Saskatchewan the provincial government has placed large numbers of single men on farms, a large proportion of the expense so involved being met by the grants received by the Province from the Dominion under the federal Unemployment and Farm Relief Act, 1931. The men thus placed on farms each receive \$5 per month from the government, and the farmers who employ and maintain them receive \$10 per month, the stipulation being made that the men shall be usefully employed.

Under the provincial colonization plan in Saskatchewan unemployed men are taken from the cities and placed on agricultural land, the province making a loan up to \$500 in each case, a period of ten years being fixed for payment for the land at the rate of \$1 per acre. In order to be eligible for such assistance the applicant must possess \$200 worth of farm equipment.

Colonization schemes similar to the Saskatchewan plan are under consideration in Alberta and British Columbia. In the latter province the government is assisting land settlement by surveying lands that had reverted to the government, and by selling these lands at low prices on easy terms.

In November the Manitoba government approved a plan under which 200 families were to be selected for settlement on improved farms, each family receiving an advance up to \$1,000 to cover actual settlement, equipment and food.

### Unemployment Relief in France

The number of unemployed officially registered as drawing the dole, as of December 19, amounted to 131,074, or 14,898 more than in the previous week. The increase during the year has been 120,388. On the same date in 1930, France counted only 10,686 unemployed. Both the Senate and Chamber of Deputies have finally voted approval of the Government's bill called "national equipment," which provides for a program of public works at a cost of 3,000,000,000 francs. The chief aim of the bill is to supply work to the unemployed extending over a period of two years. About 30,000 people are expected to be needed during the two years to work on improving harbours, digging and widening channels, building roads, developing the country's electrical equipment, etc. In order to provide funds for this program the Government is authorized to float a loan of about one billion francs in 1932 and additional loans in 1933 or following years if the completion date of the program is extended.

### Five-Year Construction Plan in Massachusetts

A special Commission on Stabilization of Employment, which had been appointed by the Governor of Massachusetts in carrying out a resolution of the Legislature at its 1931 session, has recommended the creation of a planning board for public works and the adoption of a five-year plan for State building and construction. The Commission proposes the authorization of an amount of five-year notes equal to 10 per cent of the estimated total of the five-year plan, or an amount sufficient to pay half of one year's program. Whenever the Governor shall declare an emergency, the board shall undertake to get a year-and-a-half of construction done within the current year.

"The Planning Board is to be assigned the duty of ascertaining at all times so far as possible the amount of public construction in process and under plan by the Commonwealth and the counties, the general condition of business in the State and the extent and causes of unemployment, if any, known to exist here. Upon the basis of this information it is to advise the Governor at any time concerning the existence of an unemployment emergency. The Governor is to have final decision as to the existence of such an emergency. If, on the basis of evidence in the hands of the Board, he declares an emergency, it is the duty of the Planning Board to expedite the beginning of work on additional construction projects drawn from the five-year plan up to an amount not to exceed one-half of a normal year's program under this plan. That is, the Board will undertake to get a year and a half of construction done within the current year, in order to increase employment in the building and construction industries and the industries subsidiary to them. It is to be

the duty of the appropriate financial officers of the Commonwealth at the same time to issue and sell the previously authorized short-term notes, the proceeds to be used to finance the additional construction. If necessary, such action can be taken in one or more successive years, so that a depression of more than one year's duration can be dealt with. This is made possible by the submission of a new five-year plan to the General Court each year.

"Extra construction is thus paid by the short-term notes, and certain of the future projects formerly included in the current five-year plan are completed in advance and withdrawn from future plans. Future appropriations can then be used to retire the notes. To illustrate, if the five-year plan called for a total expenditure of \$50,000,000 for the entire five-year period, with \$10,000,000 to be spent each year on the present 'pay-as-you-go policy,' the amount of authorized short-term notes issuable in any one year would be \$5,000,000. If an emergency were declared, effort would be made through the Planning Board to construct a total of \$15,000,000 worth of buildings, highways, etc., during the next 12 months, instead of \$10,000,000 worth, work being started on projects normally planned for the year following. The extra \$5,000,000 involved would, of course, be met by the issue of the previously authorized notes.

"No additional appropriation would be necessary at any time, except for interest and expenses incident to issue and retirement of the notes. No permanent debt would be saddled on the taxpayers. The plan should be worth the comparatively slight cost if it will appreciably reduce the amount of unemployment."

### Unemployment Relief in New York State

The New York State Legislature, in an extraordinary session called by Governor Roosevelt to consider the unemployment situation, enacted a law providing for unemployment relief to become effective on September 23, 1931. The purpose of the act, as stated in the preamble, is "to relieve the people of the State from the hardships and suffering caused by unemployment, creating and organizing for such purpose a temporary emergency relief administration, prescribing its powers and duties, and making an appropriation for its work." The administration

commission is to disburse the \$20,000,000 fund for relief.

The relief fund is to be raised by a 50 per cent increase in the State income tax. Taxpayers will have six months' grace in which to pay the additional tax. In order to commence the work for the unemployed at once, the necessary funds will be raised by short-term notes, which will be redeemed out of the taxes to be collected in 1932 on incomes received in 1931.

The act recognizes the economic condition existing, and that the duty of furnishing aid

to those in need or unemployed is primarily an obligation of the various municipalities, yet it is considered vitally necessary to supplement the local relief work by State action. The act is therefore declared to be a measure adopted for the public health and safety of the people, and occasioned by an existing emergency. The provisions of any law, general, special, or local, which limits or prohibits the furnishing of shelter, fuel, clothing, light medicine, and medical attendance to persons other than poor

persons does not apply to the relief authorized by the act. The temporary State agency is to function only during the emergency period, which has been defined to mean the period between November 1, 1931, and June 1, 1932. The members of the administration serve without compensation.

Two forms of relief are provided (1) work relief, provided through municipal corporations, and (2) home relief, or provision of shelter, fuel, food, etc.

## UNEMPLOYMENT INSURANCE CONSIDERED AS A BUSINESS UNDERTAKING

THE practicability of unemployment insurance from the standpoint of insurance business was the subject of a paper by Mr. Leroy A. Lincoln, vice-president and general counsel of the Metropolitan Life Insurance Company, read last April at a "round table" conference of the Insurance Department of the Chamber of Commerce, of the United States, and recently published in pamphlet form. While allowing that preventive measures for the elimination of unemployment would be preferable to relief measures, Mr. Lincoln considers that "the day when such preventive measures will be available as a complete solution of the unemployment problem is not yet in sight." In the meantime it is possible to minimize recurrences and to relieve the suffering of the unemployed; and one of the ways and means that have been proposed for reaching this end is through unemployment insurance.

### Definition of Insurance

In order to ascertain the practicability of insurance against the unemployment risk, Mr. Lincoln first clears the ground by defining insurance:

"Insurance is that agency which protects against loss by the payment to an individual, upon the occasion of some occurrence resulting in a loss, of a sum of money out of an accumulated fund previously collected, on a definite basis, from or on account of a group of persons, of which such individual was a member. The event, on account of loss from which the individual receives protection, may be one which, so far as he is concerned, may never occur at all (such as fire or accident or even sickness), or may be one which is bound to occur at some time, but of which the time of occurrence is unknown (such as death)."

### Essential Conditions of Insurance

Next Mr. Lincoln considers the "basic conditions" that are essential for the successful operation of an insurance project. These are as follows:—

(a) The probability of the occurrence of the contingency must be predictable within reasonable limits.

(b) The fact that the contingency shall have actually occurred must be one which can be verified with reasonable certainty.

(c) The contingency must be one which, when it occurs may not happen simultaneously to all the insured or to a relatively large group thereof but only, in any given occurrence, to one or to a limited number of individuals.

### Unemployment as an Insurance Risk

Applying these principles to the question in hand, the writer proceeds to consider the special difficulties surrounding unemployment as a subject for insurance, as compared with such typical insurance risks as death, accident, or sickness. He finds that unemployment fails to comply with some of the conditions of insurable risks as above laid down. In the first place it is not "predictable within reasonable limits."

As to the second condition, that of an accurate determination of the extent of unemployment at a certain time, Mr. Lincoln considers this to be "primarily a matter of arriving at an acceptable definition of unemployment for insurance purposes, the circumstances of which shall determine right to payment of benefits and the setting up of proper claim machinery so as to eliminate illegitimate claims without imposing an undue handicap on legitimate claimants. The experience to date, while hardly satisfactory as yet, justifies the expectation that with respect to this condition, an effective solution is likely to be found."

Thirdly, unemployment insurance fails to meet the condition that the loss must not occur to all members of the insured group simultaneously.

### Types of Unemployment

The major types of unemployment are next analysed as follows:—

(1) Cyclical—resulting from business fluctuations and trade depressions.

(2) Seasonal—occurring regularly during certain periods of the year in a specific industry subject to such variations, e.g., in the building and clothing industries.

(3) Technological—resulting from basic changes in production methods, over-expansion in an industry, changed fashions, or loss of markets in which the product was formerly distributed.

(4) Industrial disputes, such as strikes and lockouts.

(5) Causes of a personal nature, such as inaptitude, poor training, or limited physical, mental, or moral qualifications.

The types of unemployment numbered (4) and (5) are at once ruled out as subjects for insurance. As to types (1) to (3), Mr. Lincoln states that no final conclusions have yet been reached, although there are apparent limitations even here as to the applicability of insurance principles. "Experience," he says, "has so far indicated that insurance might be properly used in the case of persons who are normally in employment, for protection against loss from certain seasonal unemployments, and, for a limited period, from cyclical and technological unemployment. Insurance has not been able, and probably never will be able, to provide against loss from long protracted unemployment due to continued depression, without becoming, at least in part, relief or charity instead of insurance. At best, insurance benefits paid during unemployment occasioned by fundamental changes in industry and by other forms of technological unemployment are but temporary assistance; while, on the other hand, the availability of such benefits, through insurance, may actually become an obstacle to improvement, since the relief so afforded may well have a tendency to suppress the desire or necessity of the recipient to fit himself for other work."

### Conclusions

Mr. Lincoln concludes with some general statements as to the possibilities of unemployment insurance. Insurance in itself cannot, in his opinion, furnish the main solution for the general problems of unemployment; but for certain types of unemployment, it is "probably practical."

"The extent to which insurance can solve the problem of unemployment is very limited, and, indeed, there is great danger that unemployment insurance would tend to increase the incidence of the very ailment which it was

intended to remedy. It should not be implied from this that the cause of such a situation, if it should transpire, would be due entirely to the insured persons themselves. It is quite possible that the existence of insurance, sufficient in its scope, would tend to make employers and even the state, as well as the workmen, more careless about the essential evil of unemployment itself, and would tend to induce them to relax the efforts they would otherwise be making to diminish a state of unemployment."

### The Functions of the State

Referring briefly to the question whether unemployment insurance should be developed by the state or by private initiative, the writer points out the impossibility of restricting the application of any state scheme to those who are properly insurable, that is, to those who are normally employable.

"It should not, however," he proceeds, "be understood that we feel that the solution of the unemployment problem should be left entirely to private initiative. There is, in our judgment, a function for the state in the development of plans for unemployment relief. Education and information and guidance in these fields are needed. The state can be of great assistance in acting as a clearing house for information, in co-operating with employers in their attempts to find practical solutions, and in preventing the adoption of plans which, obviously, can result only in failure. No laws should be enacted except those which will insure as far as possible that these undertakings are being administered on a basis consistent with sound insurance principles. The function of the state should be to point the way rather than to undertake, itself, the initiation and operation of unemployment or other forms of social insurance."

Finally, Mr. Lincoln points out the danger lest too much emphasis on insurance may divert attention from the necessity of stabilizing employment conditions themselves.

The Ontario Council of Women recently called the attention of the provincial government to the alleged existence of child labour and also to long working hours of women in industries in the province. The Hon. Dr. J. D. Monteith, Minister of Labour for Ontario, stated in reply that, as regards child labour, the government was endeavouring to regulate working hours, not only for the sake of the children themselves, but in order to open opportunities for the employment of older workers. The minister further stated that amendments would probably be made to the Factory Act at the next session of the Legislature with the object of curtailing the working hours of women employed in factories.

## ANNUAL REVIEW OF EMPLOYMENT IN CANADA, 1931

THE curtailment in industrial activity, which first appeared towards the latter part of 1929 and continued throughout 1930, became more pronounced during the year just passed, with the result that employment in Canada was generally at a lower level during 1931 than in any other year since 1926. The same unfavourable employment conditions obtained in practically all the industrial countries of the world; indeed, the opinion has frequently been expressed by various authorities that Canada has on the whole been less affected by the general depression than many other countries.<sup>1</sup> That this is so, is partly due to the vigorous measures taken by the government to cope with the situation. Thus, reports from the Labour Department administering the relief Acts, show that under the Unemployment Relief Act, 1930, some 334,075 individuals were given employment from the passing of the Act in September, 1930, up to November 30, 1931, while the man days worked amounted to approximately 7,398,000. Under the Unemployment and Farm Relief Act, 1931, passed at the beginning of August, the number of workers given employment from the commencement of the various undertakings up to November 30, 1931, was approximately 216,700. These persons, working some 2,766,200 man days, were paid about \$7,885,500 in wages. It is not possible to estimate the number of persons who have indirectly received employment through the production and distribution of the materials used in the works undertaken.

According to the reports received from employers throughout the Dominion, the beginning of January, 1931, saw the customary contraction in employment, but although this involved a large number of workers, it was on a rather smaller scale than that rated on the same date in 1929 and 1930; this was to some extent a result of the stabilizing effect of pub-

lic works undertaken for the relief of unemployment. In place of the partial recovery usually recorded at the first of February, however, there was a further falling-off in the numbers employed, and the trend continued downward during the next two months. The expansion reported at the beginning of May, though considerable, required the services of a smaller number of workers than are ordinarily added to staffs in the early spring. In the succeeding four months, further continuous improvement was shown, but from October 1 the general movement was uninterruptedly downward. The declines at the beginning of November were not so large as usual, mainly as a result of the unemployment relief works being carried on by the various governmental authorities; the contractions noted on December 1, though involving fewer workers than those reported on the same date in 1929 and 1930, nevertheless exceeded the average decrease indicated at the beginning of December in the years for which data are available.

The accompanying chart shows, since 1921, the fluctuations in employment indicated by the firms furnishing monthly returns to the Dominion Bureau of Statistics. Owing to the marked seasonality of employment in Canada, an index of seasonal variation had been calculated according to the Harvard method<sup>1</sup>; the monthly indexes, plotted in the heavy curve, have been adjusted by means of this index, and the corrected index numbers are shown in the light curve. The elimination of the marked seasonal peaks and troughs enables the trend of employment over a period of years to be clearly seen. Both the crude and the corrected curves show that employment was lower during 1931 than in any of the preceding four years, although it was generally higher than in the five-year period, 1921-1926.

The Dominion Bureau of Statistics tabulated monthly employment returns from some 7,700 firms who reported a monthly average of 927,485 workers during 1931. Their aggregate

<sup>1</sup> Employment statistics that are generally comparable do not exist for the various industrial countries. The following shows the available data for certain countries:—

Great Britain.—The latest press reports show that 2,506,719 persons insured under the Unemployment Acts were unemployed on Dec. 21, 1931; this was approximately 20 per cent of the insured workers.

Germany.—Trade unions having 4,164,731 members reported 33.6 per cent of their membership as unemployed in August, 1931. The provisional figure showing the number registered as unemployed under the compulsory unemployment insurance Acts was 4,355,000 in September, 1931.

United States.—The index of employment in the manufacturing industries in November, 1931 was 65.4, calculated on the 1926 average as 100.

<sup>1</sup> The Harvard method is described in detail and exemplified in most modern statistical text books. In this method, link relatives are first constructed by dividing the index for each month by that for the month preceding. The median of these link relatives for each month is then ascertained, and these medians are expressed as a chain series with January as the base. The next steps involve the removal of the discrepancies between the Januaries due to long-term growth, and the conversion to a percentage basis. The resulting factor for each month is then divided into the corresponding crude index; this corrected index then shows the trend of employment after adjustment for seasonal tendencies.

Employment in Canada as reported by Employers, in Industries other than Agriculture, 1921-1931

The heavy curve is based upon the number of persons employed on the first day of the month by the firms reporting, compared with the average employment they afforded in the calendar year 1926 as 100. The light curve shows this crude curve corrected for seasonal variation as determined by the experience of the last decade.

staffs ranged between 899,823 on April 1, and 972,537 on September 1, when the index, calculated on the 1926 average as 100, reached its peak for the year, standing at 107·1. In 1930, the index reached its maximum of 118·9 on July 1, while the highest point reached in 1929 was 127·8 at the beginning of August. During the year under review, the index averaged 102·5, compared with 113·4 in 1930, 119·0 in 1929, 111·6 in 1928, 104·6 in 1927, 99·6<sup>1</sup> in 1926, 93·6 in 1925, 93·4 in 1924, 95·8 in 1923, 89·0 in 1922, and 88·8 in 1921. In connection with these indexes, it might be mentioned that the present depression has been characterized by a very general movement to retain so far as possible the usual working force by reducing the hours worked. The earnings of the persons included in the monthly reports on employment, if available, would in this way probably show in many cases a greater decline than the numbers on the payrolls.

The outstanding feature of the situation in most years is the violent fluctuation in construction work; in 1931, however, the unemployment relief projects exercised a stabilizing effect on these industries, and this, with other factors, resulted in a somewhat smoother curve in construction as a whole than is usually indicated. The number of workers employed under the relief schemes was, of course, greater than appears in these statistics, owing to the methods used in rotating the work so as to assist the largest possible number of persons. For eight months of the year, activity in construction was greater than in 1930, and employment during the year averaged slightly higher. Manufacturing on the whole was dull; this group, with logging and transportation, reported a decidedly lower level of activity than was generally indicated in the other industries. A fairly steady volume of employment was maintained in mining during the year, non-metallic ore production showing greater activity than the other divisions. Services and trade, on the whole, reported a better situation than obtained in other industries except construction; this was partly due to a moderately brisk tourist trade during the season. It is also probable that many trading establishments were obliged to lay off some of their employees for a part of many months during the year, but the methods of rotation in practice prevented the statistics for a considerable number of firms from fully showing this condition.

### Employment by Economic Areas

Firms in all provinces reported considerably less activity in 1931 than in 1930. The index, based upon the 1926 average as 100, was higher in the Prairie Provinces than elsewhere, as a result of important highway construction works undertaken for the relief of the serious unemployment situation that existed during the greater part of the year both in agricultural and industrial centres.

*Maritime Provinces.*—Employment in the Maritime Provinces showed an unusually pronounced increase at the beginning of 1931; this, however, was succeeded by three months of very severe contractions, during which the index declined from 119·3 on January 1 to 102·3 at the beginning of April. From May 1 to July 1, gains were indicated, but the downward movement was resumed at the beginning of August, continuing until October 1. Large seasonal increases in logging, together with the active prosecution of unemployment relief works on the highways, resulted in a very considerable improvement on November 1. This brought the index to 116·6, over six points higher than on the same date in 1930. The trend on December 1, however, was downward. The index averaged 108·1 during 1931, as compared with 118·3 in the preceding year, and 114·8 in 1929. Manufacturing as a whole afforded a smaller volume of employment throughout 1931 than in 1930. In the pulp and paper group, activity was greater in the first quarter of the year under review than in 1930, the previous maximum, but the expansion in the following months was not sufficient to maintain this advantage, so that the situation in the remainder of 1931 was unfavourable as compared with the same period of the preceding year; the index for the twelve months averaged 136·4, as compared with 152·5 in 1930. The lumber, textile and iron and steel industries also reported curtailment in comparison with 1930 and previous years. At the close of 1931, however, employment in textile mills was higher than it had been at the beginning of the year. Unsatisfactory export conditions during 1931 continued to affect transportation, which afforded less employment than in 1930, 1929 or 1928, and communications were also quieter. Construction generally was not quite so brisk, in spite of important works undertaken to relieve unemployment. Services showed slightly greater activity, while trade registered a rather lower level of employment than in 1930. Employment in mining, on the whole, was slacker than in the preceding year, but the falling-off in this group was not so pronounced as in certain other industries. Considerable

<sup>1</sup> As the average for the calendar year, 1926, including figures up to Dec. 31, 1926, is the base used in computing these indexes, the average for the 12 months, Jan. 1-Dec. 1, 1926, generally shows a slight variation from 100.

seasonal activity was indicated in logging towards the end of 1931, but the index averaged some 13 points lower than in 1930. The aggregate payrolls of the 571 reporting employers in the Maritime Provinces averaged 73,817 persons, as compared with the mean of 79,817 employed by the 552 firms co-operating in the preceding year.

*Quebec.*—In Quebec, there were four months of generally expanding employment, the same number as in 1930; although these gains were on a larger scale than those recorded in the preceding year, they were offset by declines that also involved a greater number of workers, so that employment averaged considerably less than in 1930. The index for each month in 1931 was below that for the corresponding month in the preceding year. From the low point of 98.5 on April 1, the index rose to 109.8 at its peak on September 1, but by the beginning of December it had fallen to 94.7, or 4.6 points less than on January 1. The labour forces of the 1,790 co-operating employers varied between 253,035 and 292,909 workers on the dates of minimum and maximum activity, respectively, averaging 268,147 for the twelve months. The mean index was 100.9, as compared with 110.3 in the preceding year. Manufacturing as a whole was slacker than in 1930. Lumber, pulp and paper and iron and steel recorded a much smaller volume of employment; the losses in iron and steel were particularly marked as a result of the closing of large railway car shops for some weeks in the autumn, but with the resumption of work in these plants during November, the situation improved to some extent. In textiles, the index was practically the same, or higher, during the first three months of 1931 than in the first quarter of 1930, but from then on until the end of the year, activity was less. Employment in logging, mining and communications was in smaller volume throughout the year. In the transportation group, activity was greater at the beginning of February, March, April and May, but less in all other months. The execution of unemployment relief projects, together with work on several large industrial undertakings, resulted in a higher level of employment in construction during eight months of 1931 than in the same months in the preceding year, while the index in this group averaged 107.7, as compared with 104.0 in 1930. Although employment in services was fairly well maintained, it was on the whole not quite so brisk as in the preceding year. The index in trade averaged practically the same, but it is undoubtedly true that many persons on the payrolls of the reporting trading establish-

ments, as in manufacturing and various other groups, were not employed full time.

*Ontario.*—An average staff of 374,279 employees was registered by the 3,400 firms furnishing data in Ontario; the mean index was 101.2 in 1931, or over thirteen points lower than in the preceding year. Manufactures reported decidedly less activity than in 1930. During the greater part of the year, the index was lower than the general manufacturing index for the Dominion as a whole; this was largely due to curtailment in the iron and steel industries which are especially important in Ontario. Employment in food, pulp and paper, building material, lumber, textile and other factories shared in the general quietness prevailing in 1931. Operations in logging camps were greatly curtailed, as a result of unfavourable markets abroad as well as at home. The index reached a very low level during the summer, standing at 21.1 on August 1; the seasonal expansion recorded in the following months brought this only to 52.6 on December 1, or nearly 54 points lower than on the same date in 1930. Mining, though slacker than in the preceding year, maintained a better volume of employment throughout 1931 than was reported in most industries, the index averaging 134.1, as compared with 142.8 in 1930, the maximum so far recorded. The production of metallic ores continued fairly high in the year just passed; this group accounts for most of the persons engaged in mining in Ontario. In communications and transportation, the numbers employed were smaller than in the preceding year; services also reported less activity than in 1930, but employment in this group was relatively higher than in any other. The index in construction, owing to unemployment relief projects, was higher in the first four and in the last month of 1931 than in the preceding year, but from May 1 to November 1 was lower; the index averaged 128.5 in the twelve months of 1931, compared with 142.6 in 1930. The volume of employment in trade, though smaller than in the preceding year, was greater than in earlier years of the record. The relatively high level of employment in services and trade may to a certain extent be associated with the activity of the tourist season.

*Prairie Provinces.*—Employment in the Prairie Provinces showed violent fluctuations during 1931, the index ranging from 97.7 on April 1 to 130.0 at the beginning of September. Expressed as a percentage of the 1926 average of the reporting firms, employment somewhat paradoxically appeared in greater volume in these provinces than elsewhere in the Dominion; this was largely due to the

vigorous unemployment relief program carried out by the governmental authorities in an effort to cope with the very great needs of agricultural as well as of industrial workers. As stated, in the 1930 review of unemployment the unfavourable conditions prevailing in agriculture since the autumn of 1929 have resulted in much unemployment among farm workers, who are ordinarily not represented in these statistics but for many of whom work had to be found during the year just passed on highway construction and maintenance. The 1,100 employers furnishing data had an average staff of 134,938 persons during the year, and the index averaged 111.5, while in 1930, the average index was 117.1. Activity in manufacturing, logging, mining, communications, transportation, services and trade was, on the whole, less in 1931 than in 1930. Within the manufacturing group, there were losses in the lumber, iron and steel and other industries. Construction work was at a higher level during most of 1931 than in 1930, but this was wholly a result of the unemployment relief measures.

*British Columbia.*—The 770 firms reporting in British Columbia employed an average working force of 77,238 employees, while in the preceding year the mean was 84,592; the index averaged 95.5, as compared with 107.9 in 1930, 111.5 in 1929, and 106.4 in 1928. All groups of manufacturing showed lowered activity, the lumber trade being especially affected by the trade depression. Logging, mining, communications, transportation, services and trade were slacker during the greater part of 1931 than in 1930, while employment in construction was maintained at a higher level than in the preceding year, as a result of the unemployment relief program.

#### Employment by Cities

Employers in the eight cities for which separate tabulations are made—Montreal, Quebec, Toronto, Ottawa, Hamilton, Windsor and the adjoining Border Cities, Winnipeg and Vancouver—recorded on the whole a lower level of activity than in 1930. The reports showed that employment was better in Ottawa and Quebec City than in the other centres above named, while the lowest indexes were reported in Windsor and Winnipeg.

*Montreal.*—The staffs of the 1,000 Montreal firms making returns averaged 138,426 persons, while the mean index, at 102.5 was 9.3 points lower than that for the preceding year. Manufacturing was not so active during 1931, the index averaging 98.8, as compared with 111.4 in 1930. The vegetable food group showed a

higher level during five months of last year than in the year preceding, but employment on the whole was slacker. The printing, publishing and paper goods, textile, tobacco and beverage, iron and steel and other groups reported curtailment as compared with 1930. Communications consistently afforded less employment, while transportation and trade were brisker in the first five months of 1931 than in the preceding year, but from the early summer the situation in this comparison became unfavourable, so that the number of persons employed in these groups averaged rather less than in 1930. The mean index for the construction industries was practically the same as in the preceding year, standing at 106.7.

*Quebec City.*—Until December, employment in Quebec fluctuated between narrower limits than usual; the index for the first six months was above the 1930 level for the same period, but, on the whole, activity was less in 1931 than in the preceding year. From the early low point of 120.7 on February 1, the index rose to its peak of 126.7 on June 1, and in spite of the slight improvement reported in a few of the following months, it was for the remainder of the year, below the maximum of the early summer. At the beginning of December it stood at 108.7, or over eighteen points lower than at the beginning of the year. The staffs of the 133 employers furnishing data averaged 13,158, while the mean index was 122.2 in 1931, compared with 125.3 in 1930. Activity in manufacturing as a whole was rather less, the mean index standing at 116.8 as against 117.9 in the preceding year. Leather plants reported a good volume of employment, but other factories were not so active. The index in transportation was practically the same, while construction, though brisker during the first seven months of 1931, recorded a lower level of employment for the year as a whole.

*Toronto.*—Employment on January 1 and February 1, 1931, showed curtailment, succeeded by three months of moderate improvement. From June until August the tendency was again unfavourable, while increases on September 1 and October 1 were followed by reductions in the next two months. At the close of the year, the index was slightly lower than at the beginning, and was also below the 1931 mean of 107.7, which was 8.6 points lower than in 1930. The number of employees of the 1,100 firms co-operating during the year under review, averaged 120,105, while in the year before the mean payroll of the 1,000 reporting employers was 123,799. Within the manufacturing group, iron and steel again reported a very marked falling-off, and losses were also indicated in food, textile, printing

and publishing and other industries. Transportation, communications and construction were not so active as in 1930. In trade employment was generally well maintained by the firms furnishing returns, although in Toronto, as in the other centres, some establishments continued to retain their ordinary staffs by reducing the hours worked by their employees.

*Ottawa.*—Manufacturing on the whole reported a smaller volume of employment than in the preceding year, all branches showing generally reduced activity. A slight gain was noted in construction, largely owing to the unemployment relief undertakings, while trading establishments, on the whole, reported rather smaller staffs. A mean payroll of 13,970 workers was employed by the 160 firms whose data were received; the index averaged 119.5, as compared with an average index of 123.1 in 1930.

*Hamilton.*—Employment in Hamilton was dull during the whole of 1931, a retrogressive tendency being in evidence during most months; the index was between nine and ten points lower at the end of the year than at the beginning. Important though this decline was, it was on a smaller scale than the reduction reported in 1930, when there was a difference of nearly 20 points between the opening and the closing of the year. All industries except construction showed curtailment, the greatest losses being in the iron and steel group. Construction, as a result the unemployment relief projects undertaken, was more active than in the preceding year, but trading establishments indicated reduced employment. The 230 co-operating firms reported an average working force of 31,607 persons; the index averaged 101.3, compared with 113.9 in 1930, 128.4 in 1929, and 108.2 in 1928.

*Windsor and the Adjacent Border Cities.*—The index number of employment in the Border Cities averaged 88.3 and the recorded payrolls averaged 10,931 workers in 1931, compared with 128.6 and 15,927, respectively, in the preceding year; in 1929 the mean index was 153.2, but in 1927, this was 86.2. Largely owing to the depression in the automobile and related industries, employment in the Border Cities was very quiet during 1931. Construction also showed less activity than in 1930.

*Winnipeg.*—Employment conditions continued unfavourable in Winnipeg throughout the year just closed, being still affected by the poor crops and the marketing situation that have been important factors since the autumn of 1929. With only four exceptions, the tendency from month to month during 1931 was steadily downward so that, the index on De-

cember standing at 93.2, was five points lower than on January 1. The mean index for the year was 97.1, compared with 107.6 in 1930 and 112.3 in 1929. On the whole all branches of manufactures were slacker than in 1930, although activity in vegetable food factories was higher at the beginning of some months than on the same dates in the preceding year. Transportation afforded a smaller volume of employment, and trade was also duller. On the other hand, construction, though at a comparatively low level, showed slight improvement over 1930 chiefly owing to unemployment relief works. An average staff of 29,975 was recorded by the 365 firms whose data were received during the twelve months under review.

*Vancouver.*—Conditions as reported by employers in Vancouver did not show so great change from those of 1930 as was the case in other cities, although considerable unemployment was indicated during the year. The situation in this respect was aggravated by the influx of unemployed persons and transients who are not ordinarily employed in Vancouver and, therefore, do not appear in the employment records for that city. Calculated from data furnished by some 316 firms with a mean payroll of 30,096 persons, the index averaged 104.5, as compared with 109.8 in the preceding year. Manufacturing showed contractions as compared with 1930, the lumber and other leading groups reporting lowered activity. The indexes for communications, transportation, services and trade also averaged lower than in 1930; on the other hand, construction, largely owing to the unemployment relief works undertaken, afforded greater employment than in 1930.

### Manufacturing

Employment in manufacturing was quieter during 1931 than in any other year since 1925. Statistics were received from some 4,670 manufacturers employing, on the average, 467,711 operatives, as compared with the average of 525,247 reported by the 4,400 establishments making returns in 1930. The index averaged 95.3 p.c. of the 1926 payrolls of the co-operating firms, as compared with a mean of 109.0 in the preceding year and 117.1 in 1929. With few exceptions, all branches of manufacturing recorded smaller payrolls than in 1930; only the woolen and silk groups showed improvement in this comparison, while the employment reported in leather factories was practically unchanged. The reductions in the iron and steel and other metal, lumber, pulp and paper, rubber and clay, glass and stone industries were especially pronounced. The level of employ-

ment in distilled and malt liquor, electric current and the electrical apparatus plants was relatively higher as compared with preceding years than was the case in other industries; these groups, however, were not so active as in 1930, the decline in the last named being considerable, the re-opening during November of large railway car shops closed in September resulted in a considerable increase in employment being shown in iron and steel towards the end of 1931, but nevertheless, this important group reported greatly curtailed operations throughout the year.

*Animal Products, Edible.*—Almost the same seasonal trends were shown in this division as in 1930, when employment was at a generally higher level. Fish-preserving and meat-packing plants recorded smaller staffs, but during most of the year employment in dairies was rather more active. The payrolls of the reporting employers averaged 17,968 persons, varying between 16,315 on February 1, and 19,824 at the beginning of July. The mean index was 102·7, compared with 109·7 in 1930, 113·8 in 1929, and 111·2 in 1928.

*Leather and Products.*—Leather factories, on the whole, afforded very slightly more employment than in 1930, the index being higher during the last nine months of the year. An average working force of 17,502 employees was recorded by the 228 co-operating establishments, and the mean index was 88·0, as compared with 87·8 in 1930. Footwear factories in particular showed improvement; records of footwear production maintained by the Animal Products Statistics Branch of the Bureau show that a monthly average of 1,504,008 pairs of shoes was turned out in the first eleven months of 1931, compared with a mean of 1,456,654 pairs in the same period of the preceding year.

*Lumber Products.*—The seasonal movements indicated in the lumber trades during 1931 were not so pronounced as usual, and employment was generally slacker than in 1930. Steady gains between February 1 and June 1, were succeeded by consistent losses during the latter part of the year. The payrolls of the firms furnishing data ranged between 44,643 persons at the beginning of June, and 32,393 on December 1, averaging 38,770 in the 12 months, as compared with the 1930 mean of 43,929. The average index, standing at 74·1, was many points lower than the mean of 93·3 for the preceding year. Rough and dressed lumber mills, owing to continued curtailment of foreign demand, as well as to unfavourable domestic markets, recorded a smaller volume of employment than in 1930, and losses in that comparison were also noted in furniture and other lumber-using plants.

*Musical Instruments.*—Activity in musical instrument factories showed a further decline during 1931, according to statements from some 35 firms whose staffs averaged 1,661. The mean index stood at 57·4 in 1931, compared with 70·9 in the preceding year. The production of wireless apparatus is not included in this industrial group, which, as in previous years, has undoubtedly been seriously affected by the popularity of radios.

*Plant Products, Edible.*—Employment in vegetable food factories, on the whole, was quieter in 1931 than in the preceding year; canneries, biscuit and confectionery and some other divisions of the group reported smaller payrolls than in 1930, while improvement in that comparison was noted in sugar and syrup factories during most of the year. An average working force of 29,986 persons was registered by the 395 reporting establishments, in which the number of operatives ranged between 27,227 on January 1, and 35,336 at the beginning of September. The mean general index of 105·4 in 1931 compared unfavourably with the 1930 average of 113·0, and also with that of 110·9 in 1929.

*Pulp and Paper.*—The pulp and paper industries continued to show the effects of the general weakness in the foreign and domestic market, employment throughout 1931 being at a lower level than in any other year since 1925. The fluctuations in the group as a whole, however, were not especially marked, and the index, standing at 94·2 on December 1, was only 4·5 points lower than at the beginning of the year. The reported staffs averaged 58,062 employees, and the index 96·5, as compared with a mean index of 109·1 in 1930. Employment in 1931 was lower than in the preceding year in all three divisions of the group—pulp and paper, paper goods and printing and publishing, but the last-named showed a lesser decline than the other two industries.

*Rubber Products.*—Activity in rubber factories decreased almost uninterruptedly from month to month in 1931; the losses in employment were, however, on a smaller scale than those indicated in the preceding year, when this group was affected by the general depression, as well as by the special depression in the automobile industries. The production of tires ordinarily employs about 55 per cent of the workers in the rubber group. The mean index of employment in 1931 was 98·7, compared with 117·4 in the preceding year, and 139·5 in 1929. The payrolls of the 42 plants supplying information during 1931 averaged 12,585, ranging between 13,557 workers on January 1, and 12,035 at the beginning of October.

*Textile Products.*—Employment in the textile industries in 1931 showed fluctuations similar to those of 1930. Following the curtailment indicated at the beginning of the year, there was a period of considerable expansion during the next three months, during which the increases were unusually large. Four months of seasonal inactivity then reduced employment by about ten per cent. This was succeeded by improvement at the beginning of September and October, but the trend was again unfavourable in November and December. At the end of the year, the index, at 94.3, was slightly higher than on January 1; the twelve-month mean, however, was 97.6, as compared with 101.2 in 1930. An average staff of 79,799 employees was reported by the co-operating manufacturers, who averaged 748. The thread, yarn and cloth branch of this group reported greater activity than in 1930, chiefly owing to improvement in the woollen and silk trades. The hosiery and knitting, garment and other divisions of the textile industry, however, recorded reductions in personnel.

*Tobacco, Distilled and Malt Liquors.*—Statements were compiled from nearly 150 firms, whose working forces averaged 14,848 persons. The mean index of 116.1 in 1931 showed a substantial falling-off from the 1930 mean of 124.9 (which was practically the same as in 1929), but was above the 1928 average of 109.3. Tobacco factories were not so active during the year under review as in 1930, and employment in the production of distilled and malt liquors was also quieter.

*Chemical and Allied Products.*—The level of employment in this group was rather lower than that reported in the preceding year; the index averaged 115.5, as compared with 118.8 in 1930 and 117.8 in 1929. An average payroll of 8,245 workers was registered by the 133 employers whose statistics were tabulated.

*Clay, Glass and Stone Products.*—Employment in these industries was greatly curtailed as compared with 1930, reflecting the general dullness in building. The index number averaged 101.7, while in 1930 it was 121.7; 160 factories reported an average working force of 10,534 persons, ranging from 9,407 on February 1 to 11,628 at the beginning of July.

*Electric Current.*—The average number engaged in the production of electric current was rather less than in the preceding year and also less than in 1929, but compared favourably with earlier years of the record. The index averaged 126.1, as compared with 130.8 in 1930, 127.6 in 1929 and 118.3 in 1928, the previous high levels of the record. The aggregate

staffs of the co-operating producers averaged 15,378 during 1931, as compared with 15,789 in the preceding year.

*Electrical Apparatus.*—Employment in this division, which includes a considerable proportion of the firms producing radios and equipment, was in smaller volume during 1931 than in 1930 and 1929, but with these exceptions, was more active than in other years for which data are available. The reported payrolls included, on the average, 15,030 workers, and the mean index was 135.7, as compared with 16,438 and 157.1, respectively, in 1930. The average index in 1929 was 143.8 and in 1928, 117.9.

*Iron and Steel Products.*—As in 1930, the trend of employment in this group was generally downward throughout the year, except for an unusually brief period of seasonal activity between February 1 and April 1, while the re-opening of large railway car shops closed in September resulted in a considerably better situation towards the close of the year than in preceding months of 1931. The automobile industries continued very dull and substantial contractions as compared with previous years were also indicated in the crude, rolled and forged, machinery, agricultural implement, railway car, shipbuilding, heating appliance, structural iron and steel, foundry and machine shop and other divisions of the group. The aggregate working force of the 730 manufacturers of iron and steel products who reported during 1931 averaged 111,395 persons; in 1930 the mean was 139,267 and in 1929 it was 161,126. The average index, at 85.9, compared unfavourably with that of 108.1 in 1930 and 125.2 in 1929. The average labour force per establishment in the year under review was 152, or 49 less than in the preceding year.

*Non-Ferrous Metal Products.*—Employment in this division was also considerably curtailed during the year under review, the index averaging less than in 1930 and preceding years since 1927. The mean index was 111.4 and the reported employees 17,180, compared with 129.3 and 19,792, respectively, in 1930.

*Non-metallic Mineral Products.*—In spite of gains in many months of the year, employment in non-metallic mineral product plants averaged lower than in 1930, the index standing at 124.9, as compared with 142.5 in 1930, 138.2 in 1929, and 120.5 in 1928. Statements were received each month from over 90 firms whose staffs averaged 12,275 persons. The gas, petroleum and other divisions of this class-

ification, though not so active as in the preceding years and 1929, nevertheless maintained a fair volume of employment.

**Other Manufacturing Industries.**—Fur factories on the whole reported much the same level of employment as in 1930; the index averaging 91.3, as against 92.0 in the preceding year. The production of wood distillates and extracts and of miscellaneous manufactured products showed a decrease.

### Logging

Logging camps, on the whole, reported decidedly less activity than in any other year on record; the index was consistently low throughout 1931, owing to a weak demand for lumber in both home and export markets. The working force of the 227 firms supplying information averaged 16,262 and the index number 60.1 in 1931; in 1930, the mean index was 108.0, and in 1929, 125.8, while the number employed by the employers co-operating during 1930 was 28,921. Many logging workers, deprived of their customary occupation, drifted to the cities, where they helped to swell the already large labour reserves. It has already been pointed out that the difficulties of collecting data covering bush operations are constantly increased by the growing practice on the part of the larger operators, of letting contracts for their wood requirements to small contractors and to settlers on the northern frontiers of settlement. During the year just passed, employment in logging was at a higher level in the Maritime Provinces and Quebec than elsewhere.

### Mining

There were losses in mining during the first seven months of 1931, succeeded by three months of increasing activity, after which the trend again turned downward. The level of employment was considerably lower than in the preceding year, although the falling-off in this comparison was not so pronounced in mining as in some other groups. The index averaged 107.7, compared with 117.8 in 1930 and 120.1 in 1929. In *coal-mining*, conditions were not so good as in 1930, employment being generally less active. The mean index was 96.6, compared with 104.1 in 1930 and 107.4 in 1929, while the labour force of the co-operating operators averaged 25,613 workers in 1931, as against 27,548 in the preceding year. Employment in *metallic ores*, though generally lower than in 1930, was maintained in fair volume, the index varying only between 134.9 on December 1, and 143.8 on August 1. The

mean index, at 138.7, was some seven points below the average of the preceding year. The staffs of the reporting firms averaged 16,217 during the year under review. *Non-metallic minerals (other than coal)* also registered reduced employment, the index averaging 97.7, as against 124.4 in the preceding year. A mean payroll of 6,457 persons was employed by the co-operating firms, while those reporting in 1930 had an average of 8,112. Quarries, asbestos mines and other divisions coming under this heading recorded less activity, reflecting the general curtailment in building construction.

### Transportation

Although there were important seasonal losses in the first three months of 1931, these involved a rather smaller number of persons than in the first quarter of the preceding year. Following this period, the tendency, except in one month, was favourable until the beginning of October, when seasonal losses were again recorded. Employment was in less volume throughout 1931, when the index averaged 95.8, as compared with 104.6 in 1930. The 345 transportation companies whose returns were tabulated employed, on the average, 111,024 workers, as compared with the mean of 120,536 reported by the 330 employers co-operating in the preceding year. In the *steam railway division*, the index averaged 91.3, or over nine points lower than in 1930. An average working force of 71,550 employees was recorded in steam railway operation, compared with 79,133 in 1930. *Street railways and cartage companies*, with an average payroll of 24,299 persons, reported a rather lower level of employment than in the preceding year, the index averaging 119.7, as compared with 123.6 in both 1930 and 1929, but with 111.7 in 1928. Employment in *shipping and stevedoring* was lower than in 1929; the mean index was 89.4, while the reported staffs averaged 15,175, varying between 12,049 persons on Jan. 1, and 17,468 at the beginning of September. In the preceding year, the mean index was 99.8 and in 1929, it was 104.7, while in 1928 it was 96.4.

### Communications

Telegraphs and telephones reported a much smaller volume of employment during 1931 than in 1930, in sympathy with the general depression in business. The index averaged 104.7, compared with 119.8 in 1930, 120.6 in 1929, and 108.2 in 1928. The personnel of the companies furnishing data averaged 27,129 employees, of whom some 81 p.c. were engaged on telephones. The percentage reductions indicated in the telegraph and telephone divisions during 1931 were quite similar.

### Construction and Maintenance

The period of uninterrupted expansion indicated in the construction industries last summer consisted of five months, as in 1930, when the gains had begun ending a month earlier; in 1931 the steady improvement between May 1 and September 1 was supplemented by a further though rather small advance at the beginning of November. The number of persons added to the payrolls, however, was smaller than in the preceding year. Despite this, activity in the construction industries, chiefly as a result of the governmental unemployment relief measures, was well maintained, being very slightly higher than in 1930 and 1929, and considerably higher than in earlier years of the record. The forces of the 1,085 co-operating employers averaged 147,777 during the twelve months, varying between 108,400 on April 1 and 199,073 at the beginning of September. The general index for this group averaged 131.4, compared with 129.8 in 1930, 129.7 in 1929, and 118.8 in 1928. The artificially stimulated activity in this group gave construction an unusually heavy weighting in the industrial distribution of the persons covered by the employment returns. Thus in 1931, construction workers averaged nearly 16 p.c. of the total of workers in all industries, compared with 12.6 in 1930, and 11.8 in 1929.

*Building construction* gained steadily from Apr. 1 to Aug. 1, but was not nearly so active as in the preceding year. The mean index was 104.3 in 1931, compared with 134.3 in 1930, 135.3 in 1929, and 112.0 in 1928. The average number of persons employed by the reporting contractors was 41,227. As already stated in connection with logging, there is an increasing tendency for the larger contractors to sublet their contracts, by trades, to sub-contractors, who usually employ a comparatively small number of workers. When they have less than 15 employees, they are not asked to furnish data on employment, so that the number employed in building is undoubtedly considerably in excess of that covered in these statistics.

*Road construction* reported an exceedingly high level of employment during the year, chiefly owing to the unemployment relief measures widely undertaken. The number employed was greater than in any other year on record. The payrolls reported averaged 72,810 workers, and ranged between 41,500 on Apr. 1 and 114,722 at the beginning of September. The average index of 216.4 compares favourably with that of 183.6 indicated in 1930, 150.1 in 1929, and 137.1 in 1928. In many districts, road work is supplementary to the occupations ordinarily followed by nearby residents, particularly agriculturists during slack periods on their farms; especially in the Western Provinces, a considerable portion of the work authorized under the provisions of the Unemployment and Farm Relief Act,

1931, was allocated in the distressed agricultural districts.

Employment in *railway construction* (in which the working forces covered averaged 33,738 men) was much quieter than in the last few years. The index averaged 85.8, while the mean in 1930 was 99.9.

### Services

Statements were received monthly from some 270 firms in this division, whose employees averaged 22,403. Gains were noted from Mar. 1 to Sept. 1, succeeded by seasonal declines in the last quarter of the year. Employment in hotels and restaurants was maintained at a fairly good level during 1931, although activity was not so great as in 1930. In the miscellaneous group of services, composed largely of laundering and cleaning establishments, employment was also in rather smaller volume than in the preceding year. The index number for the service industries as a whole was 124.7, as against 131.6 in 1930.

### Trade

Trade was quieter during 1931 than in the preceding year and 1929, but the payrolls as reported by employers were generally greater than in earlier years of the record. With two exceptions, expansion was indicated from Apr. 1 until the end of the year. The payrolls of the 820 co-operating firms averaged 87,724 persons, and the index 123.6, compared with 127.7 in 1930, and 126.2 in 1929. It has already been mentioned as highly probable that many establishments, in order to keep their usual staffs have reduced the working hours per week or per month, so that the earnings of the persons employed would, if available, show a greater falling-off than the personnel. Of the workers in the trade group, 73 p.c. were classified as employed in retail stores. In recent years, there has been a growing tendency for the larger stores and chain organizations to absorb the small businesses which would otherwise not be represented in these statistics, and this change in organization may have helped to keep the index of employment in recent years at a relatively high level in comparison with other groups.

### Index Numbers

Tables showing monthly index numbers of employment for the economic areas, leading cities and main industrial groups since 1928 are given on pages 68, 69, and 70 of this issue, while data for some 65 industries on December 1 are contained on page 71. Similar statistics for each month have accompanied the articles on employment appearing in each issue of the LABOUR GAZETTE. These data, together with yearly averages, are also published in the Annual Review of Employment for 1931, published by the Dominion Bureau of Statistics, and may be obtained on application to the Bureau.

## EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN NOVEMBER, 1931

THE following information as to the employment situation in Canada is based upon reports from four sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting on December 1 was 7,813, the employees on their payrolls numbering 901,854 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for November was 1,819, having an aggregate

membership of 189,031 persons. It should be understood that the report on the number of unemployed workers refers only to organized labour, definite figures not being available as to the number of unorganized workers who were without employment during the period reviewed.

(3) The Department of Labour receives reports from the 68 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 61 cities throughout Canada, showing the value of permits granted during the period for various classes of building construction.

### (1) Employment Situation at the Beginning of December, 1931, as Reported by Employers

The seasonal falling-off in employment recorded on December 1, 1931, was on a rather smaller scale than on the same date last year, although it exceeded the average decline recorded at the beginning of December in the last ten years. The 7,813 firms reporting to the Dominion Bureau of Statistics employed 901,854 persons on December 1, compared with 937,494 in the preceding month. Reflecting this decrease of nearly four per cent, the index, based upon the 1926 average as 100, stood at 99.1, compared with 103.0 on November 1, 1931, and 108.5, 119.1, 116.7, 108.1, 102.3, 96.5, 91.9, 96.9, 96.3 and 88.3 on December 1, 1930, 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively. Thus, employment as reported by employers was not so active as on the same date in the years 1926-1930, but was in greater volume than on December 1 in the five years, 1921-1925.

Especially noteworthy losses were indicated in construction, and there were smaller reductions in transportation, communications, services and metallic ore mining. On the other hand, considerable seasonal improvement was reported in logging and trade, and manufacturing reported greater activity, mainly due to the resumption of work in large railway car shops.

#### Employment by Economic Areas

All provinces except Ontario registered curtailment, the largest recessions taking place in the Prairie Provinces.

*Maritime Provinces.*—The seasonal reductions noted in the Maritime Provinces were on a much greater scale than on December 1, 1930, but the index of employment on the date under review was higher, largely owing to the considerable volume of unemployment relief work being afforded. Most of the decline this year took place in construction, although mining and transportation were also slacker. On the other hand, logging, manufacturing (notably of iron and steel products), and trade reported improvement. Data were received from 572 firms employing 77,344 persons, as against 79,788 on November 1.

*Quebec.*—There was a further falling-off in activity in Quebec, according to statements from 1,835 employers of 253,035 persons, or 3,801 less than in the preceding month. Construction work declined, but important improvement was shown in manufacturing, logging, shipping and trade. Most of the gain in factory employment was due to the resumption of operations in large railway car shops closed some weeks previously, but tobacco and musical instrument plants were also more active; on the other hand, there were pronounced losses in leather, lumber and pulp and paper plants. Much larger decreases were recorded on December 1, 1930, when employment was, however, in decidedly greater volume.

*Ontario.*—Employment in Ontario showed a moderate increase, 4,460 workers being taken on during November by the 3,516 firms whose statistics were received, and who had 369,987

on their payrolls. Retail trade and logging registered marked seasonal gains, and considerable improvement was indicated in iron and steel and pulp and paper factories, while the extension of unemployment relief undertakings provided work on the highways for a large number of extra persons. The lumber, food, textile, clay, glass and stone, transportation and building and railway construction industries, however, showed curtailment. The index was lower than in the same month last year, although the movement had then been downward.

*Prairie Provinces.*—Further marked declines were indicated in the Prairie Provinces on the

lower level than on the same date in 1930, when smaller reductions were noted.

*British Columbia.*—Continued shrinkage involving a greater number of workers than that noted on December 1, 1930, was shown in British Columbia, where the 757 reporting firms had 73,104 employees, as compared with 79,960 in their last statement. Food and lumber factories were slacker, as were construction and transportation; on the other hand, coal mining and logging recorded more activity. The situation was not so favourable as on the same date in 1930.

Table I gives index numbers by economic areas.

### EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

date under review; the 1,133 reporting employers had let out 26,999 workers, reducing their staffs to 128,384 on December 1. Retail trade and coal mining were seasonally more active, and large gains were also noted in manufacturing; the reopening of large railway car shops, closed for some weeks, was an important factor in this gain in factory employment, but food, pulp and paper and leather plants also reported heightened activity. On the other hand, communications, transportation and construction reported decreased employment, the losses in highway construction being especially pronounced. Employment at the beginning of December was at a much

### Employment by Cities

Of the eight centres for which separate tabulations are made, Montreal and Windsor and the Border Cities showed improvement as compared with November 1, while lessened activity was reported in Quebec City, Toronto, Ottawa, Hamilton, Winnipeg and Vancouver.

*Montreal.*—There was an increase in the employment afforded by the 1,031 co-operating firms, whose staffs were enlarged by 2,225 persons to \$134,902 at the beginning of December. Manufacturing showed heightened employment, largely owing to the reopening of important railway car shops closed down for some weeks, although tobacco and musical instru-

ment factories also reported improvement; retail trade was seasonally active, and employment increased about the port in preparation for the winter shutdown. On the other hand, construction registered considerable losses. General reductions were noted on the same date of last year, but employment then was brisker.

*Quebec.*—Industrial activity in Quebec City declined, 1,306 workers being laid off by the

137 employers whose returns were received, and who had 12,675 employees on December 1. The largest contractions were in construction, transportation and manufacturing, while trade showed seasonal improvement. A smaller recession was indicated on the same date in 1930, when the index was higher.

*Toronto.*—Continued decreases in personnel were reported in Toronto by 1,141 firms who employed 119,476 persons, as compared with

NOTE.—The "Relative Weight" in Table I shows the proportion of employees in the indicated area to the total number of all employees reported in Canada on the date under review.

Relative weight of employment by Districts as at Dec. 1, 1931.....	100.0	8.6	28.1	41.0	14.2	8.1

120,392 at the beginning of November. Trade showed noteworthy improvement, and work on the roads and in printing establishments also increased, but textile, lumber and building material plants, transportation and building construction reported reductions. Larger losses had been registered on December 1 last year, but the volume of employment was then greater.

*Ottawa.*—Curtailement was shown in Ottawa, chiefly in manufactures and construction, while trade afforded more employment; 155

employers recorded a combined payroll of 13,455 workers, as against 14,127 in their last report. Employment was not so active as at the beginning of December, 1930, although larger losses had then been indicated.

*Hamilton.*—A decline was reported in Hamilton, where an aggregate working force of 29,681 persons was employed by the 236 firms furnishing data, who had 30,365 employees on their November 1 staff. Manufacturing as a whole was slacker, in spite of gains in textile mills; the losses in clay, glass and stone

NOTE.—The "Relative Weight" in Table 2 shows the proportion of employees in the indicated city to the total number of all employees reported in Canada on the date under review.

works were most pronounced. In the non-manufacturing group, building and highway construction also showed curtailment. The index was many points lower than on the same date of a year ago, when improvement had been noted.

*Windsor and the Adjacent Border Cities.*—There was an increase in the Border Cities, mainly in iron and steel plants. Statements were tabulated from 130 employers with 9,088

workers, or 655 more than in the preceding month. Losses were indicated on December 1, 1930, but employment was then at a higher level.

*Winnipeg.*—Employment decreased slightly in Winnipeg, according to data received from 367 firms employing 32,896 persons. A small reduction was reported in manufacturing, while other groups also showed only slight changes. The index was lower than on the

NOTE.—The "Relative Weight" in Table 3 shows the proportion of employees in the indicated industry to the total number of all employees reported in Canada on the date under review.

TABLE III.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES

(AVERAGE CALENDAR YEAR 1926=100)

	All industries	Manufacturing	Logging	Mining	Communications	Transportation	Construction	Services	Trade

same date of last year, when shrinkage had also been noted.

*Vancouver.*—There was also a contraction in Vancouver, according to 323 employers of 28,752 workers, or 973 fewer than on November 1. Manufacturing, transportation and

construction showed curtailment. A rather smaller reduction had been recorded at the beginning of December, 1930, when the index was higher.

Index numbers by cities are given in Table II.

TABLE IV.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES (Average 1926=100)

Industries	Relative weight	Dec. 1, 1931	Nov. 1, 1931	Dec. 1, 1930	Dec. 1, 1929	Dec. 1, 1928	Dec. 1, 1927	Dec. 1, 1926

<sup>1</sup>The "Relative Weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

### Manufacturing

An increase in employment occurred in manufacturing establishments, 4,734 of which employed 441,601 operatives, compared with 437,138 on November 1. This advance compared favourably with the decline ordinarily reported in factory employment at the beginning of December; it was largely due to the reopening of important railway car shops which had been closed down in September. Tobacco, non-ferrous metal, musical instrument and printing and publishing plants, however, also recorded heightened employment. Losses on the whole were reported in other manufacturing establishments, those in lumber, leather, clay, glass and stone, electric current and food factories being most pronounced. Considerable reductions had been indicated at the beginning of December of a year ago, but the index was then higher.

*Animal Products—Edible.*—There were further seasonal declines in fish-canneries and dairies. The result was a reduction of 321 in the staffs of the 199 firms making returns, who had 17,390 employees. This decrease involved a smaller number of persons than that recorded on the same date in 1930, when employment was, however, at a rather higher level.

*Leather and Products.*—Employment in this industry showed a considerable loss at the beginning of December, almost entirely in boot and shoe factories. Statements were tabulated from 238 manufacturers, employing 17,078 persons, as compared with 18,071 on November 1. Smaller reductions had been noted on December 1, 1930, but the index was then a few points lower than on the date under review.

*Lumber and Products.*—Seasonal curtailment of operations on a smaller scale than at the beginning of December, 1930, occurred in this group; the losses took place chiefly in rough and dressed lumber mills, but container and vehicle factories also reported reductions in payrolls. Quebec, Ontario and British Columbia shared in the downward movement. Data were received from 753 firms in this industry, whose staffs declined from 34,428 workers on November 1, to 32,393 on December 1. The index was considerably lower than on the same date of a year ago.

*Musical Instruments.*—Further improvement was noted in musical instrument factories, according to returns from 37 manufacturers with 2,178 employees, or 207 more than at the beginning of November. Much smaller gains had been recorded on the corresponding date a year ago, but employment was then more active.

*Plant Products.—Edible.*—Contractions, recorded chiefly in the canning division of the vegetable food group, produced a seasonal reduction of 431 employees in the 397 plants from which returns were received, and which reported a combined working force of 30,738 operatives. On the other hand, flour and cereal, sugar and syrup and confectionery factories were busier. Curtailment was indicated in the Maritime Provinces, Ontario and British Columbia. The volume of employment on December 1, 1930, was larger, although the losses then noted were more extensive.

*Pulp and Paper.*—Statements were received from 551 manufacturers in the pulp and paper industry, whose payrolls were increased by 112 persons to 56,599 at the beginning of December. Employment was not so brisk as on the same date in 1930, although extensive losses had then been noted. Improvement took place in printing and publishing establishments, while pulp and paper works released employees. Reductions in personnel were shown in Quebec, but the tendency in Ontario and the Prairie Provinces was favourable.

*Rubber Products.*—A small falling-off in activity was reported in the rubber group. This took place mainly in Quebec and Ontario. The working forces of the 43 co-operating establishments stood at 12,151, compared with 12,228 on November 1. An increase had been shown on the corresponding date of last year, when the level of employment was considerably higher.

*Textile Products.*—There was a seasonal recession in employment in these industries, chiefly in the clothing trades, while knitting, cotton, woollen and silk mills were busier. Returns were compiled from 788 manufacturers employing 78,681 workers, or 169 fewer than in the preceding month. There was a much greater loss at the beginning of December, 1930, but the index was then a few points higher.

*Tobacco, Distilled and Malt Liquors.*—Employment in tobacco factories increased, but other divisions of this group also showed curtailment. An aggregate payroll of 15,431 persons was indicated by the 150 co-operating firms, compared with 14,746 at the beginning of November. Although declines had been shown on the same date last year, the index was then several points higher.

*Clay, Glass and Stone Products.*—Further seasonal reductions occurred in brick, glass and stone work; 864 persons were released by the 168 co-operating manufacturers, who

had 9,255 on their payrolls. Quebec, Ontario and the Prairie Provinces recorded most of the shrinkage. A downward tendency was also in evidence on December 1, 1930; when the volume of employment was greater.

*Electric Current.*—There was a decrease in employment in electric current plants, 95 of which reported 15,471 employees, or 412 fewer than in the preceding month. The loss occurred mainly in Quebec. An increase was reported at the beginning of December, 1930, when the index number was higher.

*Electrical Appliances.*—Slight improvement was noted in electrical apparatus plants; 81 manufacturers employed 14,691 persons, as compared with 14,628 in their last report. Employment on December 1, 1930, was higher than on the date under review, although declines were then indicated.

*Iron and Steel Products.*—A considerable advance was noted in iron and steel factories, chiefly in the railway car division as result of the reopening of large shops closed in September; automobile, machinery and agricultural implement works, however, were also busier. On the other hand, structural iron and steel, heating appliances, sheet metal works and steel shipbuilding showed curtailment. There was an increase of 8,653 in the staffs of 743 co-operating manufacturers, who employed 97,613 workers. Employment improved in all provinces except British Columbia, where practically no change was shown. The general situation in this group was not so favourable as on the same date in the preceding years, although contractions had then been indicated.

*Non-Ferrous Metal Products.*—There was an increase in employment in this division at the beginning of December, according to data received from 122 employers of 15,648 persons, as compared with 15,264 in the preceding month. Most of the gain took place in smelters and refineries. The index was lower than on December 1, 1930, despite the fact that losses had then been registered.

### Logging

Continued advances were shown in logging, in which there were general increases except in the Prairie Provinces. Statements were tabulated from 229 logging camps having 19,849 employees, or 2,640 more than in their last report. This expansion involved a much smaller number of persons than that recorded on December 1, 1930, when the index was many points higher.

### Mining

*Coal.*—Employment in coal mines increased slightly at the beginning of December, 121 persons being added to the payrolls of the 82 co-operating operators, who had 26,321 employees. The Western Provinces reported the gain. Losses were reported on the corresponding date in 1930, but the index number then was higher.

*Metallic Ores.*—There was a falling-off in employment in metallic ore mines; 288 workers were released from the forces of the 60 employers from whom information was received, and who had 15,836 persons on their pay lists. A large decline had been indicated in December, 1930, when the number engaged in the industry was rather greater.

*Non-Metallic Mineral other than Coal.*—Practically no changes in employment were noted in this industry, in which 77 firms furnished data showing that they had employed 6,072 persons. Conditions were not so good as in the same month of 1930, although the movement then was downward.

### Communications

Decreases in personnel were noted on both telephones and telegraphs, 510 persons were released from the payrolls of the co-operating companies and branches, which had 26,050 employees on the date under review. The index was lower than in the early winter of 1930, although greater curtailment had then been noted.

### Transportation

*Street Railways and Cartage.*—Employment in this division was seasonally quiet in all except the Maritime Provinces. Data were compiled from 163 firms whose staffs declined from 24,613 on November 1, to 23,841 at the beginning of December. Although this loss was rather less pronounced than that recorded on the same date in 1930, the index then was slightly higher.

*Steam Railways.*—The trend of employment in railway operation was downward, 108 employers and branches reporting 68,517 workers, as compared with 70,891 in the preceding month. The largest decrease was in Ontario and the Prairie Provinces. The index number was lower than on December 1, 1930, when smaller reductions had been indicated.

*Shipping and Stevedoring.*—Improvement was registered in shipping; an increase of 844 persons was reported by the 85 co-operating employers, whose staffs aggregated 16,788. Decreases had been noted on December 1, 1930, but the index then was higher.

### Construction and Maintenance

*Building.*—Employment in building construction showed a seasonal falling-off from the preceding month. Statements were compiled from 689 contractors employing 34,271 persons, as compared with 42,023 on November 1. The most extensive curtailment was in Quebec and Ontario, although there was a general recession throughout the Dominion. Greater shrinkage was reported on December 1, 1930, but employment was then more active.

*Highway.*—Important decreases were noted in the staffs of the 362 highway contractors furnishing statistics, who employed 85,139 workers on December 1, as compared with 115,454 in the preceding month. Declines were registered in all provinces except Ontario. The number released on December 1, 1930, was much smaller, but employment then was in decidedly less volume than on the date under review, when the unemployment relief works were on a larger scale.

*Railway.*—Activity on railway construction and maintenance showed another seasonal decline which, however, involved fewer workers than that noted on the same date in 1930; the index was then, however, higher than on December 1, 1931. Statistics were received from 43 contractors and divisional superintendents whose staffs were diminished from 30,581 men on November 1, to 27,015 on the date under review. The most pronounced contractions were in Ontario and the Prairie

Provinces, although there were general losses throughout the country.

### Services

Further seasonal reductions were reported by the 287 co-operating firms in this division, who had 20,798 employees, or 359 fewer than in the preceding month. Hotels and restaurants continued to decrease their labour forces, and laundries were also slacker. Employment was less active than on December 1, 1930, when rather greater declines had been recorded.

### Trade

Large seasonal increases were again noted in retail trade, but wholesale houses released some employees. Returns were received from 828 trading establishments with 89,756 employees, or 2,219 more than on November 1. The index, standing at 125.6, was lower than on the same date in the preceding three years, but was higher than on December 1 in the years, 1927-1931. This index is always of particular significance as an indication of the anticipated purchasing power of the people during the holiday season.

Index numbers of employment by economic areas, leading cities and industries are given in the accompanying tables. The columns headed "relative weight" show the proportion that the number of employees reported in the indicated area or industry, is of the total number of employees reported in Canada by the firms making returns on the date under review.

## (2) Unemployment in Trade Unions at the Close of November, 1931

The term unemployment as used in the following report has reference to involuntary idleness, due to economic causes. Persons who are engaged in work outside their own trades or who are idle through illness are not considered as unemployed, while unions involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month, with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

Unemployment among local trade union members continued at a rather high level throughout November, though the percentage at the close of the month showed but a nominal advance from October. Based on returns received from 1,819 labour organizations in November, with a membership total of 189,031 persons, 35,206 were reported

as without work on the last day of the month. a percentage of 18.6, contrasted with 18.3 per cent of idleness in October. Operations, however, were largely restricted from November a year ago, when 13.8 per cent of the membership involved was unemployed. Nova Scotia and Saskatchewan unions reported the largest percentage increase in idleness from October, due in the former province to inactivity in its coal mining areas, while in the latter province curtailment of employment available in steam railway operation was in a large measure responsible for the change. Fractional curtailment of activity also occurred among New Brunswick, Ontario, Manitoba and British Columbia unions. Of the gains in employment which largely offset these recessions the most substantial were reported from Quebec, some revival of industry being shown with the opening of the Angus shops in Montreal. This improvement was, however, offset in part by the slowing up of activity in

the garment trades in the same city. In Alberta also the renewal of activity in railway car shops produced a more optimistic outlook, and was a large factor in the better employment situation shown in the province. In all provinces slacker conditions prevailed than in November last year, Nova Scotia, Manitoba and British Columbia unions reporting the most pronounced employment declines.

Statistics of unemployment affecting trade union members in the largest city in each province, with the exception of Prince Edward Island, are compiled separately each month. Of the cities used for comparison Vancouver unions reported the most substantial percent-

Montreal and Regina employment contractions of lesser degree were shown, and in Edmonton the recessions indicated were nominal only.

The chart which accompanies this article illustrates the trend of unemployment by months from January, 1925, to date. The level of the curve has shown little change since the close of September, with but a slight upward tendency indicative of a gradually increasing unemployment volume, and at the close of November it attained a point considerably above that of November, 1930, when more plentiful employment was available to union members.

Increased activity in the iron and steel trades during November, largely through the

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

as compared with October. For November returns were tabulated from a total of 487 unions in the manufacturing industries, combining 54,324 members, 19.5 per cent of whom were idle on the last day of the month, contrasted with 21.0 per cent of unemployment in October. In the unfavourable situation shown in the manufacturing industries, as compared with November last year when 14.8 per cent of the members reported were without employment, the iron and steel trades shared the most extensively. Fur, wood and

glass workers, and metal polishers also recorded large percentage increases in slackness from November a year ago, which, however, did not affect the situation in the manufacturing industries as a whole to any marked degree, as together they formed but a small proportion of the total membership in the group. Among general labourers, printing tradesmen, and bakers and confectioners also the level of activity was somewhat reduced. The garment trades, though quiet during the month under review, still afforded a much greater employment volume than in November a year ago, and among leather, textile, jewellery, hat and cap workers, and pulp and paper makers also increased activity was recorded.

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month	N.S. and Prince Edward Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada
Average 1919.....	3.1	2.0	3.4	2.7	2.1	3.2	2.0	7.9	3.4
Average 1920.....	1.8	2.0	7.2	3.4	3.1	3.2	2.8	11.2	4.9

Nov., 1931.....	12.8	10.0	22.1	18.8	18.3	17.0	14.7	20.6	18.6

Reports tabulated from 50 unions of coal miners in November, with 18,712 members, indicated that 1,780 were without work on the last day of the month, a percentage of 9.5, contrasted with 6.2 per cent of inactivity in October. This downward employment movement shown from October was almost entirely confined to the coal mines in Nova Scotia, the British Columbia mines indicating an almost unchanged situation, with a slight tendency towards greater inactivity. In Alberta, however, somewhat better conditions prevailed than in October. Nova Scotia, Alberta and British Columbia unions all shared in the unemployment increase shown by coal miners from November, 1930, when 2.1 per cent of the members reported were idle, the Nova Scotia unions, as in the previous comparison, showing the most outstanding reductions. In addition to the miners entirely out of work a number were reported as working but a few days a week.

Employment in the building trades continued quite depressed during November, with a slight increase in idleness from October, chiefly seasonal in character. This was manifest by the reports tabulated from 249 unions of building tradesmen, with a membership covering 25,181 persons, and showed that 51.9 per cent were idle on the last day of the month, contrasted with 49.7 per cent in October. Carpenters and joiners, electrical workers, bridge and structural iron workers, granite and stonecutters, and painters, decorators and paperhangers all reported curtailment of activity from October, that indicated by carpenters and joiners affecting the greatest number of workers. Among bricklayers, masons and plasterers, plumbers and steamfitters, and hod carriers and building labourers, on the other hand, the trend of employment was upward, though the gains were slight,

TABLE II--PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY GROUPS OF INDUSTRIES

[illegible]

while tile layers, lathers and roofers reported the same percentage of idleness in both months being compared. A quite adverse situation was reflected in the building and construction trades as compared with November, 1930, when 37.7 per cent of the members involved were idle, bridge and structural iron workers, carpenters and joiners, electrical workers, granite and stonecutters, painters, decorators and paperhangers, plumbers and steamfitters, and tile layers, lathers and roofers all showing a decided employment drop during the month reviewed, while bricklayers, masons and plasterers indicated moderate curtailment of activity. Hod carriers and building labourers alone reported better employment conditions, the improvement registered by these workers being quite substantial.

The situation in the transportation industries varied but slightly during November from the previous month, the percentage of inactivity rising from 10.9 at the close of October to 11.1 per cent on the last day of November. The November percentage was based on the returns tabulated from 779 unions of transportation workers with a total of 65,515 members. Some falling off in available employment was noted also from November, 1930, when 8.2 per cent of the members reported were idle. Moderate declines in employment for navigation workers were registered from October, and among steam railway employees the recessions indicated were but nominal. On the other hand, fractional employment advances were recorded by street and electric railway employees, and teamsters and chauffeurs. A lower level of activity was maintained by steam railway employees, navigation workers and street and electric railway employees than in November a year ago, steam railway employees, whose returns constituted over 81 per cent of the entire group membership reported, showing the most extensive employment losses. Among teamsters and chauffeurs the tendency was toward greater activity, though the change was but nominal.

Retail clerks, with 4 unions embracing 1,205 members, indicated an unemployment percentage of .5 at the end of November, contrasted with percentages of 2.8 in October and .3 at the close of November, 1930.

Activity for civic employees tended upward during November from the previous month, the 69 unions making returns with 7,524 members indicating 1.4 per cent of inactivity at the close of the month in comparison with a percentage of 2.2 in October. Almost the same employment level was indicated as in

November, 1930, when 1.3 per cent of the members registered were without work.

Employment conditions in the miscellaneous group of trades during November remained much the same as during the previous month, with a slight trend toward greater activity, as manifest by the returns received from 133 unions with a membership of 5,971 persons. Of these 1,147 were reported out of work on the last day of the month, a percentage of 19.2, contrasted with 19.5 per cent of idleness in October. Unclassified workers, hotel and restaurant employees, and barbers reported an upward employment movement from October, which was partially offset by the recessions indicated among theatre and stage employees, and stationary engineers and firemen. Compared with the situation in the miscellaneous group of trades during November, 1930, when 14.2 per cent of the members shown were idle, stationary engineers and firemen reported the most pronounced declines in employment during the month reviewed, while curtailment of activity on a more moderate scale was apparent among hotel and restaurant, and theatre and stage employees. The employment tendency for barbers also was unfavourable, though the change was nominal only. Unclassified workers, however, reported a considerably improved situation from November, 1930. Fishermen registered a large unemployment increase during November, the 3 unions, with 1,332 members, from which reports were received showing 30.0 per cent of idleness in contrast with 15.6 per cent in October. Activity was also greatly reduced from November, 1930, when 13.6 per cent of the members reported were without work.

Better conditions prevailed for lumber workers and loggers during November than in the previous month, though the situation still remained quite slack, as shown by the reports tabulated from 3 unions including 704 members. Of these, 212 were idle on the last day of November, a percentage of 30.1, as compared with 34.1 per cent of unemployment in October. A considerable increase in idleness was reported from November, 1930, when 20.2 per cent of the membership involved was without work.

Table I shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1930 inclusive, and also the percentage of unemployment by provinces for November of each year from 1919 to 1928 inclusive, and for each month from January, 1929, to date. Table II summarizes the returns in the various groups of industries for the same months as in Table I.

### (3) Employment Office Reports for November, 1931

A decline of nearly 13 per cent in the volume of business transacted during the month of November, 1931, as compared with that of the previous month, was reported by the offices of the Employment Service of Canada, but a gain of 22 per cent was recorded when a comparison was made with the records of November, 1930. In the former instance, decreased placements were shown in construction and maintenance, farming, services and mining, that in the first named group accounting for about 75 per cent of the total

ing made semi-monthly. It will be noted that the trend of the curve of vacancies and of placements in relation to applications was slightly downward throughout the month, but at the close of the period the levels, both of vacancies and placements, were eight points and six points, respectively, above those recorded at the close of November, 1930. The ratio of vacancies to each 100 applications was 62.4 during the first half and 61.0 during the second half of November, 1931, in contrast with a ratio of 53.0 during the corresponding

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications —————

Vacancies - - - - -

Placements o—o—o—o—o—o

loss. Slight gains were reported in logging, manufacturing, and trade. Almost the entire increase over November, 1930, occurred in the highway division of construction and maintenance, farming and mining being the only other groups to show any gains, and in each of these the change was comparatively small. Declines were shown in all other industrial divisions, the largest of which were in services and logging.

The accompanying chart shows the trend of employment since January, 1929, as represented by the ratios of vacancies offered and of placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, compilations be-

month of 1930. The ratios of placements to each 100 applications during the periods under review were 59.9 and 61.3 as compared with 49.5 and 53.5, respectively, during the corresponding month of 1930.

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during November, 1931, was 1,839, as compared with 2,108 during the preceding month and with 1,521 in November a year ago.

The average number of applications for employment received daily by the offices of the Service during the month under review was 2,979, in comparison with 3,174 in October, 1931, and with 2,870 during November, 1930.

The average number of placements made daily by the offices of the Service during November, 1931, was 1,806, of which 728 were in regular employment and 1,078 in work for one week's duration or less, as compared with a total daily average of 2,067 during the preceding month. Placements in November a year ago averaged 1,482 daily, consisting of 487 placements in regular and 995 in casual employment.

During the month of November, 1931, the offices of the Service referred 45,042 persons to vacancies and effected a total of 43,326 placements. Of these the placements in regular employment were 17,465, of which 14,417 were of men and 3,048 of women, while placements in casual work totalled 25,861. The number of vacancies reported by employers was 37,666 for men and 6,447 for women, a total of 44,113, while applications for work numbered 71,483, of which 60,467 were from men and 11,016 from women.

The following table gives the placements effected by the offices of the Employment Service of Canada, each year, from January, 1921, to date:

Year	Placements		
	Regular	Casual	Totals
1921.....	280,518	75,238	355,756
1922.....	297,827	95,695	393,522
1923.....	347,165	115,387	462,552
1924.....	247,425	118,707	366,132
1925.....	306,804	106,021	412,825
1926.....	300,226	109,929	410,155
1927.....	302,723	112,046	414,769
1928.....	334,604	135,724	470,328
1929.....	260,747	137,620	398,367
1930.....	187,872	180,807	368,679
1931 (11 months).....	161,439	274,322	435,761

#### NOVA SCOTIA

There was an increase of over 1 per cent in the number of positions offered through Employment Offices in Nova Scotia during November, 1931, when compared with the preceding month and of over 33 per cent in comparison with November, 1930. Placements were nearly 1 per cent less than in October but nearly 37 per cent in excess of November a year ago. A substantial increase in construction and maintenance, due to work on highway construction provided for the relief of the unemployed, was responsible for the gain in placements over November, 1930, as declines were reported in all other groups. The only reductions of any importance, however, were in transportation, trade, and manufacturing. Most of the placements effected during the month were in construction and maintenance, as mentioned above, and num-

bered 681. There were also 427 placements in the services group, of which 244 were of household workers. Placements in regular work numbered 364 of men and 72 of women.

#### NEW BRUNSWICK

Orders listed at Employment Offices in New Brunswick during November, 1931, called for nearly 31 per cent fewer workers than in the preceding month, but nearly 28 per cent more than during November a year ago. Placements also showed a decline of nearly 31 per cent when compared with October, but a gain of 29 per cent in comparison with November, 1930. As in Nova Scotia, relief work on highway construction accounted for the gain in placements over November a year ago. This increase, however, was offset in part by reductions in the services group. The changes in other divisions were small, trade showing the largest gain and logging a loss of about the same number. During the month 526 placements were made under construction and maintenance and 556 in services. Of the latter 360 were of household workers. There were 154 men and 55 women placed in regular employment.

#### QUEBEC

During the month of November, 1931, positions offered through Employment Offices in the Province of Quebec were over 9 per cent less than in October but 15 per cent higher than in November a year ago. Placements also declined nearly 14 per cent from the preceding month but were nearly 15 per cent above November, 1930. Placements in the services group, particularly through the Montreal Women's Division, were responsible for the gain shown in the province as a whole, during the month under review, over November, 1930, as manufacturing and mining were the only other divisions to show improvement and these gains were small. Of the declines, those in construction and maintenance, logging and transportation were the largest. Industrial divisions in which employment was found for the majority of workers included: manufacturing, 79; logging, 336; construction and maintenance, 116; trade, 47; and services 810, of which 668 were of household workers. Regular employment was found for 649 men and 618 women during the month.

#### ONTARIO

Opportunities for employment as indicated by orders received at Employment Offices in Ontario during November, 1931, were 8 per cent less than in the preceding month but over 21 per cent in excess of November a

year ago. Placements declined over 8 per cent in comparison with the preceding month but were nearly 23 per cent higher than in November, 1930. Work provided for the unemployed on the trans-Canada and provincial highways accounted for the large increase in placements over November a year ago. There were, however, in addition, small gains in farming and communication. Services showed the most substantial loss in placements, with smaller declines in transportation and trade. The changes in other divisions were nominal only. Placements by industrial divisions included: manufacturing, 789; logging, 520; farming, 317; transportation, 118; construction and maintenance, 20,226; trade, 369; and services, 3,237, of which 1,861 were of household workers. During the month 6,124 men and 1,247 women were placed in regular employment.

#### MANITOBA

Employment Offices in Manitoba during November, 1930, reported a decline of over 6 per cent in the number of positions offered, when comparison was made with the records for October, but a gain of nearly 80 per cent in comparison with November a year ago. Placements also were 7 per cent less than in the preceding month but over 76 per cent higher than in November, 1930. The large gain in placements over November a year ago was due to work provided in relief of unemployment on highway construction, there being little change in all other groups. Services and trade showed the only declines of importance, while a slight improvement was reported in logging placements. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 44; logging, 138; farming, 365; construction and maintenance, 2,615; trade 68; and services, 967, of which 813 were of household workers. There were 2,116 men and 335 women placed in regular employment.

#### SASKATCHEWAN

The number of positions offered through Employment Offices in Saskatchewan during November, 1931, was nearly 2 per cent less than in the preceding month and nearly 1 per cent fewer than during the corresponding month of the previous year. Placements showed a nominal gain both in comparison with the preceding month and also when compared with November, 1930. A substantial increase in the number of farm placements over November a year ago as a result of the Federal-Provincial Farm Relief plan was almost entirely offset by reductions in logging

and construction and maintenance. Losses were also reported in services, trade and manufacturing, while small gains were recorded in mining and transportation. Industrial divisions in which the largest number of positions were filled were: manufacturing, 45; farming, 1,086; construction and maintenance, 985; trade, 53; and services, 627, of which 440 were of household workers. During the month under review 1,533 men and 313 women were placed in regular employment.

#### ALBERTA

There was a decrease of over 42 per cent in the number of positions offered through Alberta offices during November, 1931, when compared with the preceding month, but a gain of 16 per cent in comparison with the corresponding month of the previous year. Placements declined nearly 41 per cent from October but were nearly 15 per cent in excess of November, 1930. Work provided on highway construction in relief of unemployment was responsible for the gain shown over November a year ago, as mining was the only other group to show improvement and this was small. Of the declines, that in services was the largest. Farm placements were the same as in November, 1930. The majority of placements made during the month were in the following industrial groups: manufacturing, 64; farming, 330; mining, 173; construction and maintenance, 2,749; trade, 46; and services, 450, of which 319 were of household workers. Placements in regular employment numbered 1,444 of men and 227 of women.

#### BRITISH COLUMBIA

During the month of November, 1931, orders received at Employment Offices in British Columbia called for 69 per cent less workers than in the preceding month and over 3 per cent fewer than during November a year ago. Placements also were nearly 69 per cent less than in October and nearly 2 per cent below November, 1930. That placements showed such a small decline from November, 1930, was due to work provided in relief of unemployment on highway construction, as there were fewer placements in all other groups. Of the declines, those in services and logging were the largest. The majority of placements made during the month were in the following industries: manufacturing, 64; farming, 54; construction and maintenance, 2,198; trade, 54; and services, 562, of which 356 were of household workers. Placements in regular employment numbered 2,033 of men and 181 of women.

### Movement of Labour

During the month of November, 1931, the offices of the Employment Service of Canada made 17,465 placements in regular employment 4,955 of which were of persons for whom the employment located was outside the immediate district of the offices at which they were registered. Of the latter 265 were granted the Employment Service reduced transportation rate, 241 going to centres within the same province as the despatching office and 24 to other provinces. The reduced transportation rate, which is 2.7c per mile with a minimum fare of \$4, is granted by the railway companies to bona fide applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

In Ontario 129 certificates for reduced transportation were granted during November, all to provincial points. Of these 103 were issued to bushmen destined to the Timmins, Cobalt and Port Arthur zones, several offices assisting in the transfer of these workers. The Timmins zone in addition, received one steel worker from Pembroke. On certificates secured at Sudbury two miners and two machinists' helpers proceeded to Sault Ste. Marie, and one highway construction foreman and one teamster within the Sudbury zone. At North Bay 15 stationmen received certificates for transportation to Pembroke while bound for the Windsor zone were three tool makers journeying from Toronto and one metal pattern maker from Hamilton.

Benefiting by the Employment Service reduced transportation rate in Manitoba during November 50 workers were conveyed to distant employment, 40 of whom went to points within the province and 10 outside. Of the latter, 7 were destined to the Port Arthur zone and included 5 farm hands, one farm housekeeper and one cafe cook, these travelling on certificates secured at Winnipeg. In addition from Winnipeg, 2 farm hands proceeded to Regina and one farm hand to Saskatoon. The provincial movement also originated at Winnipeg, from which centre one farm domestic was transported to Brandon while 37 farm workers, one teamster, and one hotel porter went to employment within the territory covered by the Winnipeg office.

Certificates issued at Saskatchewan offices in November totalled 32, of which 17 were

provincial and 15 interprovincial. Provincially from Saskatoon 5 bushmen and one farm hand went to Prince Albert and 2 farm hands and one mine labourer to employment within the Saskatoon zone. The Regina office was instrumental in the transfer of one hotel cook to Estevan, one labourer to Saskatoon and of 4 highway construction labourers and one building construction worker to points within the Regina zone, while the remaining transfer was of a bushman travelling from Prince Albert to a point within the same zone. The interprovincial transfers were effected by the Regina office, which despatched 14 lumber workers to Dauphin and one housekeeper to Montreal.

Business transacted by Alberta offices during November involved an issue of 27 reduced rate certificates, 26 of which were to points within the province. Of these 25 were granted at Edmonton, which office was responsible for the transfer of 10 farm hands, one farm domestic, 4 loggers, 2 miners, 2 mining engineers, one lumber man, one miller, one general labourer, one hotel cook, and 2 housekeepers to employment at various centres within the Edmonton zone. In addition one farm hand was conveyed from Calgary to Drumheller. The one transfer outside the province was of a maid destined to Saskatoon and travelling from Edmonton.

British Columbia offices granted reduced rate certificates to 27 persons in November, 26 of whom went to provincial employment and one outside the province. The latter, a farm hand, was shipped to Saskatoon on a certificate issued at Prince Rupert. Included in the provincial movement from Vancouver were 4 miners, one mining engineer, and one farm housekeeper going to Penticton, and 8 carpenters, 6 loggers, 2 cooks, one first aid man, one house maid and one hotel maid to employment within the Vancouver zone. The remaining provincial certificate was issued at Prince Rupert to a logger journeying to employment within its own zone.

Of the 265 workers who took advantage of the Employment Service reduced transportation rate during November, 98 were conveyed by the Canadian National Railways, 82 by the Canadian Pacific Railway, 70 by the Timiskaming and Northern Ontario Railway, 11 by the Pacific Great Eastern Railway and 4 by the Northern Alberta Railway.

### (4) Building Permits issued in Canada during November, 1931

The aggregate value of the construction represented by the building permits issued by 61 cities during November was \$7,992,815. This was a slight seasonal decline of \$720,587, or 8.3 per cent as compared with the October

total of \$8,713,402, and a reduction of \$3,828,477, or 32.4 per cent, in comparison with the November, 1930, figure of \$11,821,292. The total for November, 1931, was lower than the average for November of the last 11 years;

the cumulative value for the elapsed 11 months of 1931 was lower than in the same period in any of the years, 1920-30, but it should be noted in this connection that there has also

been a very decided decline in wholesale costs of building materials. The Bureau's index has fallen from 153.4 per cent of the 1926 base in the first 11 months of 1920 to 82.7 per cent in the same months of 1931, a decrease of 46.1 per cent as compared with 1920.

Some 50 cities furnished detailed statistics, showing that they had issued over 800 permits for dwellings estimated to cost more than \$4,000,000, and about 1,800 permits for other buildings estimated at almost \$3,000,000. In addition, Saskatoon reported a bridge valued at \$850,000. During October, authority was granted for the erection of about 900 dwellings and 3,000 other buildings, estimated to cost approximately \$4,500,000 and \$3,800,000, respectively.

Ontario, Manitoba and Saskatchewan reported increases in the value of the building authorized as compared with October. Reductions were indicated in the remaining provinces, that of \$511,135, or 14.3 per cent in Quebec being the largest.

As compared with November, 1930, Nova Scotia, Manitoba and Saskatchewan reported increases, while the greatest decline in this comparison was that of \$2,200,973, or 41.7 per cent in Quebec.

Of the four largest centres, Montreal and Toronto recorded decreases in the value of the building authorized in November as compared with the preceding month and also with November a year ago. In Winnipeg there was an increase in both comparisons, while in Vancouver the aggregate value was higher than in the preceding month, but lower than in November of last year. Of the other centres, Quebec City, Hamilton, London, Oshawa, Peterborough, Sault Ste. Marie, East Windsor, Woodstock, Brandon, St. Boniface, Saskatoon and Nanaimo reported greater building authorization than in either comparison.

Year	Value of permits issued in August	Value of permits issued in first eight months	Indexes of value of permits issued in first eight months (1920=100)	Average Indexes of wholesale prices of building materials in first eight months (Average 1926=100)
	\$	\$		
1931.....	7,992,815	103,573,426	92.3	82.7

1922.....	11,182,030	138,698,005	123.6	108.6
1921.....	12,192,414	111,257,084	99.2	123.9
1920.....	5,627,949	112,175,268	100.0	153.4

*Cumulative Record for First Eleven Months, 1920-1931.*—The preceding table shows the value of the building authorized by 61 cities during November and in the first eleven months of each year since 1920, as well as index numbers for the latter, based upon the total for 1920 as 100. The January-November index numbers of wholesale prices of building materials in these years are also given (average 1926=100).

The aggregate for the first eleven months of this year was 31.4 per cent lower than in 1930,

and was also lower than the eleven-year average of \$147,127,689, while the average index numbers of wholesale prices of building materials were much lower than in any other year since 1920.

The accompanying table gives the value of the building permits issued by 61 cities in October and November, 1931, and November, 1930. The 35 cities for which records are available since 1910 are marked by asterisks.

## EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

DETAILED reports and tables showing the employment conditions in Great Britain and Northern Ireland are given in the British *Ministry of Labour Gazette* from month to month, a monthly summary of this information also being published. This summary showing the employment situation during October, 1931, is reproduced below. The following report on unemployment conditions in the United States is based on the statistics published by the United States Department of Labour, showing the recent trend of employment throughout the country.

### Great Britain

There was a further improvement, on the whole, in employment during November. It improved in coal mining, in pottery, glass (other than glass bottles), tinplate and metal goods manufacture, in general engineering, in the textile, leather, printing and paper industries, in dock and harbour service, and in the distributive trades.

On the other hand, employment declined in iron and steel manufacture, in shipbuilding and ship repairing, and in the building and contracting industries.

Employment showed a further slight improvement in the Midlands and the North of England, particularly in the North-Western division, where, for the first time this year, the percentage of insured persons unemployed was lower than at the corresponding date last year. It remained very bad, however, in these areas and also in Scotland and Wales. In Northern Ireland, employment again improved slightly, and was better than in November, 1930, but was still very bad. In London and the Southern areas, there was a further slight seasonal decline and employment was slack.

Among the workpeople, numbering approximately 12,770,000 insured against unemploy-

ment in Great Britain and Northern Ireland, and working in practically every industry except agriculture and private domestic service, the percentage unemployed at November 23, 1931 (including those temporarily stopped as well as those wholly unemployed), was 21.4, as compared with 21.9 at October 26, 1931, and with 18.9 at November 24, 1930. The percentage wholly unemployed at November 23, 1931, was 18.0 as compared with 18.1 at October 26, 1931; while the percentage temporarily stopped was 3.4, as compared with 3.8. For males alone the percentage at November 23, 1931, was 23.6, and for females 15.9; at October 26, 1931, the corresponding percentages were 23.6 and 17.5.

At November 23, 1931, the numbers of persons on the Registers of Employment Exchanges in Great Britain were 2,070,442 wholly unemployed, 435,705 temporarily stopped, and 108,968 normally in casual employment, making a total of 2,615,115. This was 110,977 less than a month before, but 328,655 more than a year before. The total included 2,044,391 men, 65,672 boys, 457,130 women, and 47,922 girls.

The 2,070,442 wholly unemployed included approximately 988,324 insured persons with claims for insurance benefit (consisting of those who (a) had paid at least 30 contributions during the preceding two years, (b) had received less than 156 days' benefit in their current benefit years and, (c) if 156 days' benefit in their current benefit years and, (c) if 156 days' benefit had become payable in a previous benefit year ending on or after November 12, 1931, had paid at least 10 contributions since the 156th day of benefit); 796,392 insured persons with claims for transitional payments; 174,574 insured persons not in receipt of insurance benefit or transitional payments, and 111,152 uninsured persons.

In Great Britain and Northern Ireland the total number of persons on the registers of Employment Exchanges at November 23, 1931, was 2,679,077, and at November 30, 1931, it was 2,687,833.

### United States

The Bureau of Labour Statistics of the U.S. Department of Labor reports the changes in employment and pay-roll totals in November, 1931, as compared with October, based on returns made by 50,200 establishments in 15 major industrial groups, having in November 4,551,410 employees, whose combined earnings in one week were \$101,596,891.

Increased employment and pay-roll totals were reported in the retail trade group, in continuation of the seasonal expansion which began in September.

Two additional groups, electric railroads, and power, light, and water plants reported slight gains in pay-roll totals over the month interval coupled with small decreases in employment.

The remaining 12 industrial groups included in this monthly employment survey reported a falling-off in both employment and earnings from October to November. Decreases of less than 1 per cent were shown in the bituminous coal mining and telephone and telegraph groups, and declines of less than 2 per cent

were reported in the metalliferous mining, wholesale trade, power, light, and water, and electric-railroad groups. Manufacturing, anthracite mining, hotels, laundries, dyeing and cleaning, crude petroleum producing, and quarrying reported somewhat larger decreases. The canning and preserving industry reported the usual large decline in employment in November, due to the seasonal closing of vegetable canning establishments. The combined total of these 15 industrial groups shows a decrease of 2.4 per cent in employment from October to November, and a decrease of 3.7 per cent in pay-roll totals. This decrease in pay-roll totals, which is more pronounced than the decrease in employment, is accounted for to some extent by the general observance of Armistice day and election day in certain localities during the November pay period.

In a statement issued on December 19 in its official publication, the *Monthly Survey of Business*, the American Federation of Labour makes the following summary of unemployment among trade union members during November:

"Our weighted figures in November reached the highest point thus far reached with 20 per cent of the membership out of work. Since January unemployment has averaged 18.8 per cent."

## FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding the contracts executed by various departments of the Government of Canada which include among their provisions fair wages conditions for the protection of the labour to be employed.

Reference was made in the LABOUR GAZETTE, June, 1930, page 652, to the Fair Wages and Eight-Hour Day Act of Parliament which was adopted on May 30, 1930. The text of this measure appeared in the April, 1930, issue, page 383. This Act provides as follows:—

3. (1) Every contract made hereafter with the Government of Canada for construction, remodelling, repair or demolition of any work shall be subject to the following conditions respecting wages and hours:—

(a) All persons in the employ of the contractor, sub-contractor, or of any other person doing or contracting to do the whole or any part of the work contemplated by the contract shall be paid such wages as are generally accepted as current from time to time for competent workmen in the district in which the work is being performed for the character or class of work in which they are

respectively engaged; provided that wages shall in all cases be such as are fair and reasonable;

(b) The working hours of persons while so employed shall not exceed eight hours per day except in such special cases as the Governor in Council may otherwise provide, or except in cases of emergency, as may be approved by the Minister.

(2) The provisions of this section shall not apply to persons employed in the fabrication or manufacture of materials, supplies or equipment for use in the work contemplated where such fabrication or manufacture is carried on in any established plant or factory other than a plant or factory established for the purposes of the work contemplated.

The Act was put into effect at once as respects contracts for construction, remodelling, repair or demolition, both as to its provisions as to current and fair and reasonable rates of wages and as to the application of the eight-hour day.

With respect to contracts for other classes of work, the Fair Wages Policy of the Government of Canada (which has been in effect since 1900 and was expressed in an Order in Council adopted June 7, 1922, and amended April 9, 1924), requires that they must contain

either a fair wage schedule based on the current wages rates and working hours in the district, or a general fair wage clause requiring adherence to the current wage rates and working hours in the district for the different classes of labour employed or, in the absence of such standard conditions, fair and reasonable rates and hours. The conditions above-mentioned are referred to in the Order in Council as "A" conditions. Following is the text of the General Fair Wage Clause referred to:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade in the district where the work is carried on or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may in the manner and subject to the provisions hereinabove set forth, decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any service performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or

employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

It is further provided in the Order in Council that "all contracts for the manufacture and supply to the Government of Canada of fittings for public buildings, harness, saddlery, clothing and other outfit for the military and naval forces, Royal Canadian Mounted Police, letter carriers, and other Government officers and employees, mail bags, letter boxes, and other postal stores, and any other articles and things hereafter designated by the Governor in Council" must contain provisions for the observance of the current wages rates and working hours in the district, or, in the absence of any such current standards, fair and reasonable rates and working hours. These conditions are referred to in the Order in Council as "B" conditions, and include the following Fair Wages Clause:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work such hours as those fixed by the custom of the trade as respects hours in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, except for the protection of life and property, or on due cause shown to the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the Contractor until the Minister of Labour's decision has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

In both the "A" and "B" conditions of the Fair Wages Order in Council the Minister of Labour is empowered to determine questions which may arise as to what are the current or fair and reasonable wages rates and working hours. The contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper

books and records showing the names, trades and addresses of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government any time it may be expedient to the Minister to have the same inspected.

It is declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wage rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payment remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workman employed claim therefor may be filed with the Minister of the department with which the contract has been made and payment of such claim may be made by the latter. (Under the "A" conditions these rights extend to moneys payable for the use or hire of horses or teams.)

All workmen employed in the execution of the contract shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

Under the "A" conditions clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contract are specially instructed to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

The "B" conditions provide that the contractor's premises and the work being performed under contract shall be open for inspection at any reasonable time by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

During the past month statements were received in the Department of Labour showing that the following contracts were recently executed by the Government of Canada, those included under the "A" groups containing either fair wages schedules as shown below, or the General Fair Wages Clause above mentioned, and those coming under the "B" group containing the Fair Wages Clause specified in the "B" Conditions as given above:—

#### DEPARTMENT OF NATIONAL DEFENCE

##### *Contract in Group "A" (Construction, etc.)*

Construction of conduit for steam mains at the Royal Canadian Air Force Training Station, Trenton, Ont. Name of contractors, The Quinte Construction, Limited, Trenton, Ont. Date of contract, December 17. Amount of contract, \$3,760. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Carpenters.....	\$0 80	8
Labourers, ordinary.....	0 40	8
Steam fitters.....	0 70	8
Steam fitters' helpers.....	0 45	8
Concrete workers.....	0 40	8
Concrete mixer operator.....	0 55	8
Truck driver.....	0 45	8
Driver team and wagon.....	0 75	8
Driver horse and cart.....	0 60	8

#### DEPARTMENT OF PUBLIC WORKS

##### *Contracts in Group "A" (Construction, etc.)*

Construction of wharf repairs at Les Eboulements, P.Q. Name of contractor, Mr. Galulus Bilodeau, La Malbaie, P.Q. Date of contract, December 10, 1931. Amount of contract, approximately \$5,429. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Carpenters.....	\$0 55	8
Blacksmiths.....	0 50	8
Blacksmiths' helpers.....	0 40	8
Labourers.....	0 35	8
Timbermen.....	0 42½	8
Driver, horse and cart.....	0 55	8
Driver, team and wagon.....	0 70	8

Partial reconstruction of wharf and construction of an extension to wharf at Grindstone, Magdalen Islands, Gaspé, Co., P.Q. Name of contractors, Messrs. William Harney and Henri Lemieux, Lauzon, P.Q. Date of contract, December 19, 1931. Amount of contract, approximately \$7,946.50. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Carpenters.....	\$0 55	8
Timbermen.....	0 42½	8
Blacksmith.....	0 50	8
Labourers.....	0 35	8

Construction of additions and alterations to the interior fittings, etc., of Public Building at Hawkesbury, Ont. Name of contractors, Interior Hardwood Co., Ltd., Kitchener, Ont. Date of contract, December 4, 1931. Amount of contract, \$823. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Stonemasons.....	\$0 80	8
Brick and hollow tile layers.....	0 80	8
Carpenters and joiners.....	0 70	8
Plasterers.....	0 80	8
Painters and glaziers.....	0 60	8
Labourers.....	0 40	8
Driver, horse and cart.....	0 60	8
Driver, team and wagon.....	0 75	8
Motor truck driver.....	0 45	8

Construction of additions and alterations to the Armoury, Milton, Ont. Name of contractors, J. B. Mackenzie & Son, Georgetown, Ont. Date of contract, October 1, 1931. Amount of contract, \$4,800 and unit prices. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Concrete finishers.....	\$0 60	8
Tile layers.....	1 00	8
Bricklayers.....	1 00	8
Structural iron workers.....	0 90	8
Carpenters and joiners.....	0 70	8
Sheet metal workers.....	0 70	8
Roofers, felt and gravel.....	0 60	8
Lathers, metal.....	0 70	8
Plasterers.....	1 00	8
Painters and glaziers.....	0 65	8
Plumbers and steamfitters.....	0 70	8
Electricians.....	0 70	8
Labourers.....	0 40	8
Driver, horse and cart.....	0 60	8
Driver, 2 horses and wagon.....	0 75	8
Truck driver.....	0 45	8

Construction of a new roof covering for the Armoury at Kingston, Ont. Name of contractors, Hyatt Jumbo Roofing Co., Ltd., Toronto, Ont. Date of contract, December 15,

1931. Amount of contract, \$1,797. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Sheet metal workers.....	\$0 90	8
Roofers, asphalt shingles.....	0 60	8
Labourers.....	0 40	8
Driver, one horse and cart.....	0 60	8
Driver, team and wagon.....	0 80	8
Motor truck driver.....	0 45	8

Construction of repairs to the protection pier at Nurlington Channel, Wentworth County, Ontario. Name of contractors, The R. C. Huffman Construction Co. of Canada, Limited, Toronto, Ont. Date of contract, December 19, 1931. Amount of contract, \$8,925. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Labourers.....	\$0 40	8
Blacksmiths.....	0 60	8
Blacksmiths' helpers.....	0 45	8
Concrete mixer engineer.....	0 75	8
Concrete finisher.....	0 65	8
Carpenters and joiners.....	1 00	8
Steam hoist engineer.....	0 80	8
Firemen.....	0 45	8
Timbermen.....	0 50	8
Motor truck drivers.....	0 45	8

Construction of a concrete tunnel, pipe chambers, conduit steam and return mains, etc., in the public building at Toronto, Ont. Name of contractors, P. Lyall & Sons Construction Co., Ltd. (In liquidation), of Montreal, P.Q. Date of contract, December 23, 1931. Amount of contract, \$26,895. The General Fair Wages Clause was inserted in the contract.

Dredging work at Hamilton, Ontario. Name of contractors, The R. C. Huffman Construction Co. of Canada, Ltd., Toronto, Ont. Date of contract, December 15, 1931. Amount of contract, approximately \$18,540. The General Fair Wages Clause was inserted in the contract.

#### *Contract in Group "B" (Interior Fittings, etc.)*

Construction of alterations and additions to the interior fittings in the public building at Sudbury, Ont. Name of contractors, Carrington Construction Co., Ltd., Sudbury, Ont. Date of contract, December 19, 1931. Amount of contract, \$3,500. The "B" conditions were inserted in this contract.

## CORRECTION

In the schedule printed in the *LABOUR GAZETTE*, November, 1931, page 1250, the rate of hourly wages for labourers under the contract for the construction of wharf repairs at Clarke City, P.Q., should be 35 cents (instead of 45 cents).

## POST OFFICE DEPARTMENT

Following is a statement of payments made in December, 1931, for supplies ordered by the Post Office Department under contracts which were subject to the regulations for the suppression of the sweating system, the securing of payment to the workers of fair wages, and the performance of the work under proper sanitary conditions:—

Nature of Orders	Amount
<i>Making metal dating stamp and type, brass crown seals, cancellers, etc.</i>	
Pritchard-Andrews Co., Ltd., Ottawa, Ont.....	\$ 1,259 38
<i>Making and repairing rubber stamps, daters, etc.</i>	
Pritchard-Andrews Co., Ltd., Ottawa, Ont....	275 20
Capital Rubber Stamp Works, Ottawa, Ont....	105 10
<i>Making and supplying letter carriers' uniforms.</i>	
Robert & Corn, Lachine, Que.....	2,689 50
Kaufman Rubber Co., Kitchener, Ont.....	16 29

## RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received in the Department. Such agreements are summarized each month in the *LABOUR GAZETTE*. In the majority of cases the agreements are signed by both the employers and the employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

## Manufacturing: Printing and Publishing

TORONTO, ONTARIO.—PUBLISHERS OF DAILY NEWSPAPERS AND THE INTERNATIONAL STEREOTYPERS AND ELECTROTYPERS UNION, LOCAL No. 21 (NEWSPAPER AGREEMENT).

The agreement which came into effect July 1, 1928, for a period of three years and was summarized in the *LABOUR GAZETTE*, December, 1928, page 1375, was renewed for another year to June 30, 1932.

The wage rate remains at \$46.50 per week for day work with a 48-hour week and \$47.50 per week for night work with a 42-hour week.

TORONTO, ONTARIO.—EMPLOYING STEREOTYPERS AND ELECTROTYPERS AND THE INTERNATIONAL STEREOTYPERS AND ELECTROTYPERS UNION, LOCAL No. 21 (COMMERCIAL AGREEMENT).

The agreement which came into effect July 1, 1928, for a period of three years and was summarized in the *LABOUR GAZETTE*, December, 1928,

page 1376, was renewed for a further two years to June 30, 1933.

The wage rate remains at \$46 per week with a 48-hour week for day work and 40 hours for stereotypers employed at night on column-plate work.

## Construction: Buildings and Structures

OTTAWA, ONTARIO.—THE OTTAWA BRANCH OF THE ASSOCIATION OF CANADIAN BUILDING AND CONSTRUCTION INDUSTRIES AND THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS, LOCAL No. 93.

Agreement to be in effect from January 1, 1932, to April 30, 1933, and thereafter from year to year unless four months' notice of change is given by either party.

Only union members to be employed, if available, and the union's representative will have access to all jobs to confer with the shop steward.

Hours: 8 per day, 4 on Saturdays, a 44-hour week.

Overtime: all overtime from 5 p.m. to 10 p.m., time and one-half; from 10 p.m. to 8 a.m., double time. Work on Saturday afternoons, time and one-half; work on Sundays and holidays, double time. If two or more shifts are worked they will receive the regular rate of wages.

Wages for journeymen carpenters: 80 cents per hour. (This is a reduction of 10 cents per hour over the 1931 rate.)

An industrial council consisting of five members of each party and an independent chairman will be established to adjust any disputes between the parties, and their decision will be binding.

TORONTO, ONTARIO.—SHEET METAL CONTRACTORS AND THE INTERNATIONAL ASSOCIATION OF SHEET METAL WORKERS, LOCAL No. 30.

Agreement to be in effect from January 1, 1932, to April 30, 1933, and for another year unless notice of change is given by either party 30 days before the expiration date.

This agreement is the same as the one which came into effect May 1, 1931, and was summarized in the LABOUR GAZETTE, December, 1931, page 1356, with the following exceptions:—

Hours: 8 per day from Monday to Friday inclusive, but no work on Saturday except by special permit from the union.

Wages for journeymen sheet metal workers: from January 1, 1932, to April 30, 1932, 95 cents per hour; from May 1, 1932, to April 30, 1933, 90 cents. (The rate in effect from May 1 to December 31, 1931, was \$1.07½ per hour.)

REGINA, SASKATCHEWAN.—THE REGINA BUILDERS' EXCHANGE AND THE OPERATIVE PLASTERERS' INTERNATIONAL ASSOCIATION, LOCAL No. 393.

Agreement to be in effect from June 1, 1931, to May 31, 1932.

On jobs where three or more plasterers are employed, a foreman will be employed who must be a union member.

Hours: 8 per day with 4 on Saturdays, a 44-hour week in the city. For work outside the city, 10 hours per day may be worked.

Overtime: time and one-half from 6 p.m. to 9 p.m. on first five days of the week. All other overtime including work after 1 p.m. on Saturdays and all work on Sundays and holidays, double time.

Wages per hour for plasterers: \$1.30. Foremen 10 cents per hour extra.

For work out of the city, transportation and travelling time to be paid by contractor and in case of jobs lasting less than two weeks, board also will be paid by the contractor.

In case of any dispute, a committee consisting of three members of each party will be formed to settle it.

## Transportation and Public Utilities: Electricity and Gas

MOOSE JAW, SASKATCHEWAN.—NATIONAL LIGHT AND POWER COMPANY LIMITED AND THE INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS, LOCAL No. 802.

Agreement to be in effect from May 1, 1931, to April 30, 1932, and thereafter subject to thirty days' notice.

Hours: 8 per day, 6 days per week, a 48-hour week, but shorter hours may be adopted during December, January and February if there is scarcity of work.

Overtime: time and one-half for first four hours. All other overtime and also for work if required on the seventh consecutive day, double time. Except for trouble men and service men and their assistants, all employees working on statutory holidays will be paid double time.

Wages per hour: sub line foreman 95 cents; journeymen linemen—first class 90 cents, second class 80 cents; meter installer—first year 50 cents, second year 60 cents, third year 70 cents, fourth year 80 cents; plant electrician's helper 50 to 90 cents. Wages per month: foreman Meter Department \$165, plant electrician \$195, trouble man \$180. Journeymen lineman in charge of from two to four men will be paid 2½ cents per hour more than the standard rate. If in charge of more than four men they will be classed as sub foremen and paid accordingly.

Apprentices are to serve four years.

Seniority of service to be considered in filling vacancies.

After a year's service, all employees will be given two weeks' holidays with pay and if necessary, three weeks sick leave with half pay.

The Company agrees to carry at its own expense the insurance policies of employees, which policies increase in face value \$100 per year to a maximum of \$1,500.

## Pension Plan of a Montreal Firm

According to a recent press announcement, Messrs Charles E. Frosst and Company, of Montreal, manufacturing pharmacists, have contracted with the Metropolitan Life Insurance Company to establish an employees pension plan as well as a group life insurance program to include total and permanent life disability provisions. Based on individual salaries, the plan provides for life insurance from a minimum of \$800 to a maximum of \$3,000. Retirement benefits becoming effective after July 1, 1931, have been established on a co-operative basis, being purchased by the joint contributions of employer and employee. However, the cost of benefits for service prior to that date has been paid by the employer.

The plan provides for past and future service retirement benefits. Past service benefits amount to 1 per cent of an employee's annual salary, as of July 1st, 1931, multiplied by the number of years of service prior to that date. Future service benefits, purchased jointly by the company and the employees, amount to 1½ per cent of each employee's annual salary, multiplied by the number of years of service,

commencing July 1, 1931. An employee's full annuity becomes payable at a normal retirement age of 65, although earlier or later retirement with the benefits adjusted accordingly, may be arranged by mutual consent.

A feature of the plan is the provision allowing any employee who agrees to take a reduced pension, to have its payment continued to his widow or other dependant selected by him, should he die after retirement.

The Superintendent for Old Age Pensions in Saskatchewan, in his last annual report, says:—"It will be remembered that the years 1911, 1912 and 1913 saw the largest influx of settlers into Saskatchewan in the history of the province, and it is only now, twenty years later, that we find that many of the older people who came here during those years are qualifying for the Old Age Pension. I, therefore, estimate that the number of pensioners will continue to increase until the spring of 1934, when I think the peak will be reached."

## PRICES, RETAIL AND WHOLESALE, IN CANADA, DECEMBER, 1931

### Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during the month was slight, both the weekly family budget in terms of retail prices and the Dominion Bureau of Statistics index number of wholesale prices being slightly lower.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average prices in sixty-nine cities was little changed at \$7.85 for December as compared with \$7.82 for November; \$10.10 for December, 1930; \$11.83 for December, 1929; \$11.31 for December, 1928; \$11.17 for December, 1927; \$11.18 for December, 1926; \$11.56 for December, 1925; \$10.58 for December, 1924; \$10.73 for December, 1923; \$10.39 for December, 1922; \$11.00 for December, 1921; \$14.84 for December, 1920; \$16.92 for June, 1920 (the peak); \$13.65 for December, 1918; and \$7.96 for December, 1914. The advance was due mainly to a seasonal rise in the price of eggs, although the prices of milk, butter, flour and rolled oats were also slightly higher. The prices of beef, veal, mutton, fresh and salt pork, bacon, bread, beans and prunes were lower. Including the cost of fuel and rent with that of foods the total budget averaged \$17.76 at the beginning of December as compared with \$17.81 for November; \$20.46 for December, 1930; \$22.11 for December, 1929; \$21.56 for December, 1928; \$21.37 for December, 1927; \$21.40 for December, 1926; \$21.87 for December, 1925; \$20.90 for December, 1924; \$21.21 for December, 1923; \$20.97 for December, 1922; \$21.49 for December, 1921; \$25.67 for December, 1920; \$26.92 for July, 1920 (the peak); \$21.64 for December, 1918; and \$14.26 for December, 1914. In fuel anthracite coal was slightly higher, while wood and coal oil were down in the average. Lower quotations for rent were reported from Kitchener, Sarnia, Port Arthur and Fort William.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was slightly lower at 70.3 for December as compared with 70.6 for November; 77.7 for December, 1930; 96 for December, 1929; 94.6 for December, 1928; 97.2 for December, 1927; and 97.9 for December, 1926. Eighty-four prices quotations were higher, seventy-five were lower and three hundred and forty-three remained unchanged.

In the classification according to chief component materials two of the eight main groups were lower and six were higher. The Vegetables and Vegetable Products group and

the Animals and their Products group declined, the former due to lower prices for wheat, oats, rye, barley, flax and flour, which more than offset higher prices for bran, shorts, hay and potatoes, and the latter due to lower prices for hides, hogs, lambs, cured meats and eggs which more than offset higher prices for steers, calves and butter. The groups which advanced were: the Fibres, Textiles and Textile Products group, owing mainly to higher quotations for raw cotton and raw silk; the Wood, Wood Products and Paper group, because of higher prices for spruce lumber and for pulp; the Iron and its Products group, because of advanced quotations for hot rolled and annealed steel sheets, steel tank plates and automobile body plates; the Non-Ferrous Metals and their Products group, mainly because of higher quotations for electrolytic copper, copper sheets, copper wire bars, lead and zinc; the Non-Metallic Minerals and their Products group, due to higher prices for coal and kerosene; and the Chemicals and Allied Products group, mainly because of higher quotations for dyeing and tanning materials.

In the grouping according to purpose both consumers' goods and producers' goods were lower, the former because of declines in the prices of flour, rolled oats, cured meats, cheese and lard, and the latter due to lower quotations for wheat, oats, rye, hogs, lambs and lumber, which more than offset higher prices for bran, shorts, raw silk, steers, calves, copper and zinc.

In the grouping according to origin lower prices for grains, eggs, hogs and lambs more than offset advances in the prices of raw cotton, raw rubber, steers, calves, lead, tin and copper causing a decrease in the group of raw and partly manufactured goods. Fully and chiefly manufactured goods were also lower, due to reductions in the prices of flour, rolled oats, cured meats, cheese and lard. Canadian farm products and articles of marine origin were lower, while articles of forest origin and articles of mineral origin advanced.

### EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of December, of seventy-one staple foodstuffs, groceries, coal, wood, and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity, and every

\*Prior to 1926 number of commodities was 236.

(Continued from page 92)

effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city except milk and bread are the average of quotations reported to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of milk, bread and fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in

the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the

prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. At times when the price of an

\*The figures for "all items" were calculated by giving the following weights to each group: Food, 35%; Fuel, 8%; Rent, 18%; Clothing, 18%; Sundries, 20%.

article heavily weighted for this purpose rises or falls (abnormally) the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climate conditions, nor for the differences in the heating value of the various fuels. It was estimated when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

### Index Numbers of Changes in the Cost of Living

In March, 1921, the Department published in the LABOUR GAZETTE a table of percentages of changes in the cost of living since 1913 as a tentative cost of living index number, using the figures of the above-mentioned budget for the calculation for food, fuel and rent, with preliminary figures for clothing and sundries added and this table has been brought down to date at intervals since. The calculation of a comprehensive cost of living index number covering all items of workingmen's family expenditure in progress since 1918 had been sufficiently advanced to enable the publication of preliminary figures by groups in a supplement to the LABOUR GAZETTE, January, 1926, on Prices in Canada and in Other Countries, page 9. This table gave figures for June and December each year from 1914 to 1926, inclusive. Figures have since been given for March and September each year since 1917 and the accompanying table gives figures for December each year from 1914 to 1919, quarterly from 1920 to 1929 and monthly since January, 1930. As stated in the above-mentioned supplement, the figures in the food group in the family budget are still used to show the changes in food prices but in the other groups the percentage changes in the prices of each article have been weighted

according to workingmen's average family consumption, and in the fuel and light groups gas and electricity have been included.

### Cost of Electric Current and Gas for Householders

With rates in 1913 as 100, index numbers of electric light rates were 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.3; 1916, 86.3; 1917, 84.6; 1918, 82.9; 1919, 81.6; 1920, 81.1; 1921, 81.4; 1922, 80.1; 1923, 77.7; 1924, 76.5; 1925, 73.8; 1926, 73.2; 1927, 70.9; 1928, 69.3; 1929, 67.4; 1930, 64.7; 1931, 64.1.

The above figures were arrived at by converting to the base of 1913 as 100, an index number of electric current costs from 1900 to 1913 constructed for the Board of Inquiry into the cost of living in Canada, 1913-15 (Report Vol. 2, page 318), and bringing the figures down to 1930. The figures are unweighted. The Dominion Bureau of Statistics has issued an index number of electric current rates for household consumption on the basis of figures in 1926 as 100, as follows: 1923, 108.3; 1924, 105.1; 1925, 101.7; 1926, 100.0; 1927, 99.0; 1928, 97.1; 1929, 94.6; 1930, 92.3.

The following are index numbers of rates for manufactured and natural gas for the years 1913 to 1928 issued by the Dominion Bureau of Statistics: Manufactured gas, 1913, 100; 1914, 98.3; 1915, 98.1; 1916, 96.3; 1917, 100.7; 1918, 107.4; 1919, 111.1; 1920, 125.4; 1921, 143.6; 1922, 140.6; 1923, 135.7; 1924, 134.6; 1925, 131.6; 1926, 131.1; 1927, 128.9; 1928, 128.5; 1929, 128.0; 1930, 127.6. Natural gas, 1913, 100; 1914, 107.0; 1915, 112.5; 1916, 112.5; 1917, 113.9; 1918, 114.0; 1919, 116.1; 1920, 125.1; 1921, 137.6; 1922, 163.2; 1923, 163.0; 1924, 162.2; 1925, 179.3; 1926, 172.4; 1927, 166.9; 1928, 158.9; 1929, 159.1; 1930, 158.8. For the years 1900 to 1913 two index numbers of gas costs calculated for the Cost of Living Inquiry in 1914-1915, have been averaged and converted to the base of 1913 as 100, as follows: 1900, 125.8; 1901, 125.8; 1902, 125.8; 1903, 125.2; 1904, 123.9; 1905, 120.1; 1906, 107.5; 1907, 108.8; 1908, 106.9; 1909, 105.7; 1910, 103.8; 1911, 99.4; 1912, 106.6; 1913, 100.0.

### Retail Prices

The general downward movement in beef prices continued in December, sirloin steak being down from an average price of 26 cents per pound in November to 25 cents in December; round steak from 21.2 cents per pound to 20.2 cents; rib roast from 19.6 cents per pound to 18.9 cents; and shoulder roast from 13.7 cents per pound to 13.3 cents. Both veal and mutton were also lower, the former aver-

aging 16 cents per pound in December and 16.2 cents in November, and the latter 21.9 cents per pound in December and 22.1 cents in November. Pork prices were lower in most localities, fresh declining from an average of 18.4 cents per pound in November to 16.6 cents in December and salt from 18.8 cents per pound to 18 cents. Breakfast bacon was 28.2 cents per pound in November and 26.2 cents in December.

Eggs showed a substantial seasonal advance, fresh averaging 49.5 cents per dozen in December, 44.3 cents in November and 32.4 cents in October, and cooking averaging 36.7 cents per dozen in December, 34.4 cents in November and 27.5 cents in October. Milk was slightly higher at an average price of 10.6 cents per quart, increases being reported from Thetford Mines, Belleville, Cobalt and Lethbridge. Creamery butter was slightly higher at an average price of 27.2 cents per pound as compared with 26.2 cents in November, the increase being more pronounced in the western provinces. Cheese was unchanged at an average price of 22½ cents per pound.

Bread was down in the average from 6.1 cents per pound in November to 6 cents in December, while flour was slightly higher in the average at 3.1 cents per pound as compared with 2.9 cents in November. The price of beans declined from an average of 5.2 cents per pound in November to 4.9 cents in December. Potatoes were practically unchanged at 70 cents per ninety pounds. Prunes were slightly lower, averaging 11.8 cents per pound as compared with 12.1 cents in November. Anthracite coal averaged \$16.18 per ton in December as compared with \$16.14 in November. A decrease in rent was reported from Kitchener, Sarnia, Port Arthur and Fort William.

### Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

The movement of grain prices during December was toward lower levels, No. 1 Manitoba northern cash wheat, Fort William and Port Arthur basis, being down in the average from 67.3 cents per bushel in November to 60.6 cents in December. The low price for the month was 58½ cents per bushel and the high 63½ cents. The decline occurred mostly in the first half of the month, after which prices were relatively steady. Among the factors tending toward higher prices were said to be the unfavourable weather in the Argentine together with lower shipments from Russia. The factor tending to depress prices was said to be

the increasing supplies from Australia and the Argentine with the marketing of the new crop. Other grains also averaged lower, western barley being down from an average of 42.5 cents per bushel to 38.4 cents, western oats from 33.6 cents per bushel to 30 cents, rye from 48.8 cents per bushel to 42.8 cents, and flax from \$1.06 per bushel to 98.9 cents. Flour at Toronto declined from \$5.22 per barrel to \$5.03. Raw sugar at New York declined from \$1.54 per cwt. to \$1.36 quoted in Canadian funds. Granulated sugar at Montreal was unchanged at \$4.56 per cwt. Ceylon rubber was up from 5.2 cents per pound to 5.6 cents (Canadian funds). Santos coffee at Toronto was up from 14.5 cents per pound to 15.5 cents. In live stock, steers at Toronto advanced from \$5.92 per hundred pounds to \$6.04 and at Winnipeg from \$4.83 per hundred pounds to \$5.18. Veal calves at Toronto were up from \$7.23 per hundred pounds to \$7.39 and at Winnipeg from \$5.75 per hundred pounds to \$6.23. Bacon hogs continued to decline, being down at Toronto from \$5.23 per hundred pounds to \$4.81, at Winnipeg from \$4.20 per hundred pounds to \$3.89, and at Montreal from \$5.20 per hundred pounds to \$4.97. Lambs at Toronto were down from \$6.59 per hundred pounds to \$6.38. Creamery butter at Toronto rose from 23.7 cents per

pound to 24.5 cents and at Montreal from 23.5 cents per pound to 24.5 cents, while at Winnipeg the price was up from 22 cents per pound to 25 cents. Fresh eggs were substantially lower at Montreal at 45.6 cents per dozen as compared with 54.8 cents in November. At Toronto the price was down from 49.9 cents per dozen to 40.9 cents. Raw cotton, quoted in Canadian funds, was up from 7.2 cents per pound to 7.6 cents, this in spite of the increased crop estimate and the fact that visible supplies were considerably higher than a month ago. Raw silk at New York was up from \$3.08 per pound to \$3.16 (Canadian funds). This slight increase was said to be due to the exchange situation. Pine lumber declined from \$40-\$42 per thousand board feet to \$39-\$41. In iron and steel automobile body plates advanced from \$3.46 per hundred pounds to \$3.72 and annealed steel sheets from \$3.56 per hundred pounds to \$3.97. These advances were also said to be due to the unfavourable exchange situation. In non-ferrous metals copper advanced from \$8.75 per hundred pounds to \$9.45, tin from 29 cents per pound to 29.5 cents and silver from 36.2 cents per ounce to 36.4 cents. Anthracite coal at Toronto was slightly higher at \$13.81 per ton, while bituminous run-of-mine at Montreal was up from \$5.65 per ton to \$5.95.

## PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes give the latest information available as to the movements of prices in Great Britain and certain other countries. The index numbers of the cost of living are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases. Tables showing cost of living and wholesale prices index number for various countries appear in the bulletin "Prices in Canada and Other Countries 1931" which is a supplement to this issue of the LABOUR GAZETTE.

### Great Britain

**WHOLESALE PRICES.**—The Board of Trade index number, on the base 1924=100, was 64.0 for November, an advance of 1.9 per cent for the month. Of the food groups, cereals advanced 9.0 per cent, while meat and fish declined 3.1 per cent and other foods 0.1 per cent. Non-foods as a whole were 2 per cent higher with advances in all groups.

The *Statist* index number, on the base 1867-1877=100, was 83.0 at the end of November, an advance of 0.8 per cent for the

month. With the exception of a fall of 3 per cent in animal food, all groups were included in the advance.

**COST OF LIVING.**—The Ministry of Labour index number, on the base July, 1914=100, was 148 at December 1, an advance of 1.4 per cent for the month which was entirely due to the advance in food prices. Flour and bread, milk, eggs, potatoes and cheese were all higher, while meat, bacon and butter were lower. Rent, clothing, fuel and light and sundries were all unchanged for the month.

### France

**WHOLESALE PRICES.**—The index number of the General Statistical Office, on the base 1914=100 (gold basis) was 85 for November, a decline of 1.2 per cent for the month. With the exception of vegetable foods and sugar, coffee and cocoa, all groups were lower than the October level. National products were 1.9 per cent lower while imported products were practically unchanged.

### Germany

**WHOLESALE PRICES.**—The index number of the Federal Statistical Office on the base 1913=100, was 106.6 for November, a decline of 0.5 per cent for the month. Foods of vegetable origin, foods of animal origin and fodder all advanced but were counteracted by a decline of 7 per cent in cattle, making the total of the agricultural products group unchanged for the month. Of the other twelve groups, only iron and steel and textiles showed advances; rubber was unchanged and all the other groups were lower than for October.

**COST OF LIVING.**—The official index number, on the base 1913-1914=100, was 131.9 for November, a decline of 0.9 per cent for the month. Food, clothing and sundries were lower, rent was unchanged, while heat and light was slightly higher.

### Italy

**WHOLESALE PRICES.**—The index number of the Milan Chamber of Commerce, on the base 1913=100 (pre-war currency) was 88.5 for November, a decline of 0.5 per cent for the month. Declines in animal foods, chemical products, minerals and metals and miscellaneous industrial materials were partly offset by advances in vegetable foods, textiles, construction materials and miscellaneous vegetable products.

The American Federation of Labour announced that opposition will be offered to the passage of a measure now before the United States Congress which would define "vagrants" as being "persons over the age of 17 years who have not sufficient means to maintain themselves or their families, who live idly and without employment, and who are able to work and refuse to work." The Federation claims that while such a law might be of use in the war against bootleggers and gamblers, it might also be used against strikers and unemployed persons, and was in conflict with the principle that accused persons are presumed to be innocent until they are proved guilty.

The Provincial Treasurer of Ontario, in his "pre-sessional financial Statement," published in the *Ontario Gazette*, January 2, states that "the Province's contribution to Unemployment Relief during the year amounted to \$790,000 in respect of direct relief and \$4,251,000 paid out on account of public works. The former has been charged to Ordinary Expenditure and the latter to Capital. . . . Looking to the future," the Treasurer concludes, "the outlook is obscure, but there is evidence of a growing realization throughout the world that prosperity is dependent on

**COST OF LIVING.**—The index number of the cost of living, Milan, on the base June, 1927=100, was 80.58 for October, a decline of 0.8 per cent for the month.

### United States

**WHOLESALE PRICES.**—The *Annalist* index number, on the base 1913=100, was 97.6 for December, a fall of 4.3 per cent for the month. Substantial declines were recorded in farm products, food products and fuels, with small declines in textile products, metals, building materials and miscellaneous commodities. There was no change in chemicals.

*Bradstreet's* index number, which is the sums total of the prices per pound of 96 commodities of common consumption was \$7.7325 at January 1, a fall of 2.3 per cent for the month. This is the lowest index number recorded since June, 1908. Of the 13 groups, only three advanced; they were chemicals and drugs, fruits and metals. All other groups were lower than at December 1.

**COST OF LIVING.**—The index number of the National Industrial Conference Board, on the base 1923=100, was 83.9 for November, a decline of 1.2 per cent for the month. Every group was lower than for October, except that there was no change in fuel and light.

mutual co-operation, and that no country is self-sufficient. Governments the world over are faced with stern realities, and are setting their hands to the task of putting their financial houses in order."

Expenditures for the relief of families and homeless men in communities representing 90.2 per cent of the population of the United States for the first three months of 1931 amounted to \$75,492,789, compared with \$22,338,144 in the corresponding period of 1929, according to the President's Organization on Unemployment Relief.

The National Economic League (United States) recently submitted a series of questions to the members in regard to certain proposed measures for the immediate relief from the strain of the present depression. The replies that were received recommended cancellation, reduction or further postponement of war debts and reparations and prompt lowering of tariff schedules. Other measures approved were the adoption of a more positive policy by the central banks, including the Federal Reserve Bank, for preventing excessive inflation and deflation, establishment of a national economic advisory council and amendment of the anti-trust laws.

## RECENT LEGAL DECISIONS AFFECTING LABOUR

### Distinctions between Unlawful Assembly, Unlawful Association and Riot

The term "unlawful assembly," as employed in section 87 of the Criminal Code (Revised Statute of Canada, 1927, Chapter 36), was analyzed and explained by the Alberta Supreme Court in dismissing a series of applications of certain persons for leave to appeal against their conviction by a lower court on charges of being members of an unlawful assembly.

Chief Justice Harvey delivered the judgment of the Appeal Court in each appeal. All these cases arose out of disturbances at Calgary last June. Dealing with the case of *Rex versus Jones and Sheinin* his Lordship described the circumstances that had led to the trouble:—

"The City of Calgary," he said, "had arranged to provide work for a portion of the time to unemployed persons. For that purpose certain places in the city were designated for the workers to meet to have their work assigned to them. On Monday morning, June 29, city relief officers appeared at one of these designated places for the purpose of putting certain unmarried men to work, who had cards showing that they were entitled to relief work, the scheme being that two days' work in the week would be provided for which \$4 would be paid. When the city officers arrived shortly before eight o'clock there was a large gathering of more than 100 persons, including a number of women, of whom the appellant Sheinin was one. The women, of course, were not there to be assigned to work. The appellant Jones was also there and he had no card entitling him to work there. Both, however, were exhorting the prospective workers not to go to work. . . .

"The method employed for putting the men to work was to distribute them by trucks to the places where they were to work. After one or two trucks had been sent off, obstruction was offered by members of the crowd by making a barricade of planks and hot water heaters, etc. As the men got away in some of the trucks stones were thrown at them. A number of police arrived while the men were being sent off and there is no evidence that anyone was actually injured but not more than half of the members assigned to work at that place actually were sent out. Many others, including some with their lunch pails, did not come forward, appearing, as one witness said, 'to be scared to work.' As serving to explain the purpose of the assembly and demonstration mentioned, the Calgary chief of police gave evidence that on Sunday, the

previous day, there was circulated in the city a document calling for a strike. . . .

"He (the chief of police) also gave evidence regarding unemployment conditions in the city and measures for their relief, as well as measures taken by him in anticipation of trouble and for its prevention. His evidence was objected to at the trial and the admission of it is one of the grounds of appeal. In my opinion there is no valid ground of objection to the reception of this evidence.

"As far as it deals with the general unemployment situation that is a matter of such public notoriety as to permit the Court to take judicial notice of it and if anything more is required we need only look at the Dominion statutes and we find in chapter 1 of the statutes of the second session of 1930 in which only three Acts were passed, provision made for the expenditure up to \$20,000,000 for various works, the preamble to the statute reciting that unemployment throughout Canada had become a matter of national concern and that it was desirable that assistance should be rendered by the Government of Canada towards its relief, and again chapter 58 of the statutes of 1931, assented to on August 3, 1931, which after reciting that 'by reason of the continuing world-wide economic depression there exists in many parts of Canada a serious state of unemployment and distress' makes provision for the expenditure without limitation of amount by the Governor in Council of such moneys as he 'may deem expedient for relieving distress, providing employment and maintaining within the competence of Parliament, peace, order and good government throughout Canada.' These statutes indicate not merely the existence of general unemployment but also the very great seriousness of it and of the importance of measures for its relief."

Discussing the nature of the crime with which the appellants were charged, Chief justice Harvey proceeded:—

"The charge is 'being members of an unlawful assembly.' Sec. 87 of the Criminal Code, R.S.C., 1927, ch. 36, defines an unlawful assembly as follows:—

'An unlawful assembly is an assembly of three or more persons who, with intent to carry out any common purpose, assemble in such a manner or so conduct themselves when assembled as to cause persons in the neighbourhood of such assembly to fear, on reasonable grounds, that the persons so assembled will disturb the peace tumultuously, or will by such assembly needlessly and without any reasonable occasion provoke other persons to disturb the peace tumultuously. Persons lawfully assembled may become an unlawful assembly if they conduct themselves

with a common purpose in such a manner as would have made their assembling unlawful if they had assembled in that manner for that purpose."

"It will be seen that to constitute the offence there need be no intention on the part of any member of the assembly to commit any offence, but it is the manner in which the assembly conducts itself that brings it within the purview of the section.

"Suppose a party of three or more friends assemble to view a football match, quite innocently, and being dissatisfied with the conduct of a player or the referee but with the common purpose of showing their disapproval they conduct themselves in such a manner as to cause others in their vicinity reasonably to fear that they intend to assault some one or otherwise 'disturb the peace tumultuously,' to use the words of the section, then they have committed a breach of the section and are liable to the penalty prescribed. But since in such a simple way an innocent assembly may become an unlawful one it is not, in itself, treated as a major offence, the penalty prescribed being only one year's imprisonment.

"It is quite a different thing from an unlawful association, whose purpose is to bring about a change of government or other change by force, the penalty for which under sec. 98 is a maximum of 20 years' imprisonment.

"The appellants are not charged with being members of, nor is there anything in the evidence to indicate that they have any connection with an unlawful association. The seriousness of the offence of which they were convicted lies rather in the probable or even possible consequences, in other words, in what it may lead to.

"If an unlawful assembly goes a step further and proceeds to do what the persons in the neighbourhood fear it may do, viz., 'disturb the peace tumultuously,' it has become a riot (sec. 88) and the punishment for a rioter is two years, but that is not all that is involved in it. In the case of a riot by 12 or more persons, any sheriff, mayor or justice, who has notice of it, is legally bound to do what is commonly spoken of as 'read the Riot Act,' in other words, he has to call on them to disperse (sec. 91), and if they fail to disperse within 30 minutes they are guilty of an offence for which they may be sent to prison for life (sec. 92); but that is not the worst, for equally if they do not disperse the officer mentioned is legally bound to cause their arrest, for which purpose he is entitled to call to his assistance whom he will, and if in the endeavour to arrest or disperse them any of the rioters are killed such killing is excused (sec. 93); and moreover if the sheriff or other officer fails in his duty he

is liable to be imprisoned for two years (sec. 94); and if any one called in to assist fails to render such assistance he also is guilty of a crime and may be punished by one year's imprisonment (sec. 95)."

His Lordship cited the judgment delivered by Mr Justice Newcombe in the Supreme Court of Canada in 1926, in the case *Reners versus Regem* (LABOUR GAZETTE, June, 1926, page 618). In this, and in other judgments to which he referred, it was shown that "the common purpose and the likelihood of a disturbance are questions to be determined ordinarily not by direct evidence but by inference from the conduct of the meeting and from all the circumstances surrounding it. . . ."

"It appears clear," the judgment concluded, "that in the present case there was ample evidence to warrant the finding that the assembly of which the appellants were clearly members had developed into an unlawful one within the definition of the Code, and but for the arrival of the police might have developed into a serious riot. The correctness of the conviction cannot, therefore, be questioned.

"As regards the sentence, a part of what has been said above was with the view to the consideration of this feature of the case. The seriousness of the case arises out of the conditions existing, not merely here, but throughout Canada, and it cannot be said that a reasonably severe sentence should not be imposed as a deterrent, not merely as regards the appellants but as regards all others who might be disposed to act likewise.

"The application and appeal should be dismissed in all respects."

*Rex versus Jones and Sheinin; Rex versus Thernes; Rex versus Farby and Dworkin, Rex versus Campbell* (Alberta), 1931, *Western Weekly Reports*, Vol. 3, page 716.

#### Limitation of Term Independent Contractor

A truck driver was employed by a lumber company in British Columbia to drive one or more of the company's trucks. It was the practice of the company to make deductions, in respect to assessments payable to the Workmen's Compensation Board, from moneys owing to their employees. The employee in question submitted objections to such deductions being made, excepting those for medical aid, about which there was no dispute. Finally, on the occasion of the winding-up of his accounts with the company, he made serious complaint and the case was heard by Judge Swanson in Yale County Court. His Honour gave judgment for the plaintiff for the amount claimed and costs, for the following reasons:—

"It is quite clear," he said, "that these assessments are to be levied and to be payable by the company, and not by its employees. It is equally clear that a 'workman' cannot contract himself out of the benefits reserved for him under the Act. Such an agreement as alleged here by defendant company would in my view be clearly in defiance of the statute and should be declared illegal.

"It is however alleged by defendant company that plaintiff in fact is not a 'workman', nor a 'servant' of the company, but an independent 'contractor'. I am clearly of the opinion (for the reasons which I shall presently state) that the plaintiff is not a 'contractor', but is a 'workman' or 'servant' of the company acting throughout under the orders and control of and subject to dismissal at hands of defendant company.

"Sec. 2 defines a 'workman' as including one who has 'entered into or works under a contract of service,' etc. Sec. 13 reads as follows:

It shall not be competent for a workman to agree with his employer to waive or to forego any of the benefits to which he or his dependants are or may become entitled under this Part, and every agreement to that end shall be absolutely void.

Sec. 14 reads:

Subject to the provisions of subsection (1) of section 33 in respect of medical aid, it shall not be lawful for an employer either directly or indirectly, to deduct from the wages of any of his workmen any part of any sum which the employer is or may become liable to pay into the Accident Fund or otherwise under this Part, or to require or permit any of his workmen to contribute in any manner towards indemnifying the employer against any liability which he has incurred or may incur under this Part.

(2) Every person who contravenes any of the provisions of subsection (1) shall be guilty of an offence against this Part, and shall also be liable to repay to the workman any sum which has been so deducted from his wages or which he has been required or permitted to pay in contravention of subsection (1).

"In this case I hold that the plaintiff was a 'servant' in the employ of defendant company, and was a 'workman' within the meaning of the Act. I think it is clear from the evidence of the plaintiff, and the admissions of Liveland, the company's superintendent, that plaintiff was under the direction of the company's superintendent and yard foreman. He was obliged to take his instructions from the superintendent and the yard foreman. He was instructed as to the place from which he was to haul ties and poles, where to deliver and put them. Liveland admits that if plaintiff did not carry out his instructions he could 'fire' him. Plaintiff used not his own truck, but the truck of the company, who supplied the oil and gas. Plaintiff did not hire any men under him to do this work . . ."

His Honour cited various judgments bearing upon the question of position under the Act of a workman who stood in a situation similar to that of the plaintiff. One of these decisions was by the Privy Council in the case of *Bull and Co. versus West African Shipping Company* (1927) where Lord Shaw of Dunfermline said:—

"Their Lordships think it only necessary to refer to *Donovan v. Laing* (1893) for a clear exposition of the question to whom attaches responsibility for the act of a servant transferred, so to speak, for the convenience of working a chattel lent or hired to another. In a sense, that is to say, a general sense, he is the servant of the master who sends him, but upon the practical point of responsibility when he is doing the work of, and under the orders or control of, the other employer to whom he is sent, he is, in the eye of the law, the servant of the latter and the latter is, in the eye of the law, his employer."

"I think," Judge Swanson concluded, "the above authorities abundantly bear out the position I am taking here that the plaintiff was a 'workman' within the meaning of sec. 2 of the Act. It is also worthy of note that defendant company have treated plaintiff as a 'workman' by entering his name on their pay roll. I have gone into this matter at some length as I understand that this is a test action to determine liability of the company in a large number of cases of a similar nature."

*McAllister versus Bell Lumber and Pole Company* (British Columbia) 1931, *Western Weekly Reports*, 1931, vol. 3, page 767.

### Use of Annuity Tables in Assessing Damages for Injuries

The principles to be observed by a Court in assessing the damages caused to a workman as the result of an accident were discussed in the Appeal Division, Court of King's Bench, at Montreal, in connection with an action for damages for permanent injury caused by an automobile accident. The degree of permanent incapacity had been placed by doctors at 20 per cent and the trial judge reached the conclusion that the respondent had suffered an annual loss of \$150, arriving at that amount by taking 20 per cent of \$750, the amount of the injured man's annual earnings before the accident. He further found that, in order to obtain an annuity from the Dominion of Canada of \$150, a capital sum of \$2,745.50 would be required, and he consequently awarded this amount to the claimant. In the Appeal Court, Mr. Justice Bond referred to this use of the annuity tables as follows:—

"Reference to annuity tables to ascertain the probability of life is quite legitimate, but

to adopt the cost of an annuity as the absolute basis of calculation of the indemnity to be awarded at common law is an error, as pointed out by the Chief Justice of the Province of Quebec in the case of *Montreal Tramways v. Dupéré* (1) (pages 419 et seq.). The Court may take these elements into consideration, but many other elements and circumstances must also be considered in endeavouring to reach a proper appreciation of a just indemnity to be awarded,—such as, for instance, capacity to work of the injured party; his station in life; the nature of the work for which he is fitted; periods of enforced idleness; and ordinary risks of life and health.—These, and like considerations, are those upon which a proper indemnity is to be based in actions under the common law, and not the blind acceptance of mortality tables and the cost of an annuity. Applying these principles, and taking into consideration all the surrounding circumstances as disclosed by the evidence, I consider that a sum of \$1,500 is a fair and just compensation under this head. For the foregoing reasons, I would maintain the appeal, with costs, and reduce the amount of the

condemnation to the sum of \$2,589, made up as follows: loss of one year's wages, \$624;—Hospital Bill, \$315;—account of Doctor St. Jacques, \$150;—Compensation for permanent disability, \$1,500."

*Rolbin versus Frechette* (Quebec) 1931, *Rapports Judiciaires de Québec*, Vol. 51, page 514.

#### **Picketing does not necessarily involve Intimidation**

A fur company at Washington, D.C., having refused to renew an agreement with the local Fur Workers' Union, the union placed pickets, wearing signs which told of the strike, in front of the employer's premises. The company applied in the District of Columbia Supreme Court for a writ to prohibit picketing, claiming that it constituted intimidation. Justice Wheat dismissed the application, declaring that the pickets were not committing an unlawful act by informing people that a strike existed. "The allegations of the employer" he said, "are too trivial to justify the Court's intervention."

[NUMBER 2

## NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

### Monthly Summary

A SEASONAL contraction in industrial employment was shown at the beginning of January, 1932, the resulting losses involving a rather larger number of workers than those indicated on January 1, 1931, but approximating the average decline indicated at the opening of the preceding ten years. The Dominion Bureau of Statistics tabulated statements from 7,832 firms, each with at least 15 employees, in all industries except agriculture, fishing, hunting and highly specialized business. The payrolls of these concerns declined from 904,492 persons on December 1 to 835,960 at the beginning of January, a decrease of 68,532 persons, or 7.6 per cent. Reflecting this contraction, the employment index number (based upon the 1926 average as 100) stood at 91.6 on January 1, 1932, compared with 99.1 in the preceding month, and with 101.7, 111.2, 109.1, 100.7, 95.9, 90.7, 84.9, 89.8, 87.3, 78.8 and 88.8 on the same date in 1931, 1930, 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively. Employment as reported by employers was thus at a lower level than at the beginning of January in the years 1927-1931, but the index was higher than in the preceding six years of the record.

At the beginning of January, 1932, the percentage of unemployment reported to the Department of Labour by local trade unions throughout Canada was 21.1, contrasted with 18.6 per cent of idleness at the beginning of December, with 17.0 per cent at the beginning of January, 1931. The January percentage was based on reports tabulated by the Department of Labour from 1,874 labour organizations, embracing a membership of 188,553 persons.

Reports received from the offices of the Employment Service of Canada indicate a decrease in the volume of business transacted in December, as shown by the average daily placements effected, when a comparison is made with the previous month and also with December a year ago. This decline from December, 1930, was due, chiefly, to fewer place-

ments in construction and maintenance and logging, although all other groups, except manufacturing and farming, also showed reductions in a lesser degree. Vacancies in December, 1931, numbered 36,867, applications 53,885 and placements in regular and casual employment 35,747.

The average cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in sixty-nine cities was somewhat lower at \$7.68 for the beginning of January as compared with \$7.85 for December, 1931; \$9.86 for January, 1931; \$11.88 for January, 1930; \$11.30 for January, 1929; \$11.03 for January, 1922; \$16.92 for June, 1920 (the peak); \$15.30 for January, 1920; and \$7.73 for January, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics based upon prices in 1926 as 100 was also lower at 69.4 for January, as compared with 70.3 for December, 1931; 76.7 for January, 1931; 95.3 for January, 1930; 97.1 for January, 1922; 164.3 for May, 1920 (the peak); 149.4 for January, 1920; and 64.9 for January, 1914.

The loss in working time caused by industrial disputes in Canada in January, 1932, was less than in the preceding month but was greater than the corresponding loss in January last year. Eleven disputes were in progress at some time during the month, involving 1,044 workers and resulting in the loss of 10,729 working days. Corresponding figures for December, 1931, were: 14 disputes, 1,258 workers and 15,649 working days; and for January, 1931, 9 disputes, 768 workers, and 7,558 working days.

### Industrial Disputes Investigation Act

During January one new application for the appointment of a Board of Conciliation and Investigation was received by the Department. A Board was completed in connection with the dispute involving the clerks etc. employed by the Canadian Pacific Railway. Following the reports of the Board on the dispute between the Winnipeg Electric Railway and its employees,

which were printed in the last issue, agreements were concluded between the company and various classes of its employees. In connection with the application from the electrical workers employed by the same company, a settlement of the dispute was effected through the mediation of the Chief Conciliation Officer of the Department, and the application was then withdrawn. A settlement was also effected in the case of the dispute between the two railway companies and their employees, agreements being concluded mainly on the basis of the Board's report (LABOUR GAZETTE, December, 1930). Full particulars of the proceedings during the month are given on page 123.

### **Industrial Disputes Act adopted by Province of Quebec.**

The Quebec Legislature, during its recent session, adopted "An Act respecting Investigations into Industrial Disputes," giving full effect within the province to the provisions of the

Industrial Disputes Investigation Act (Revised Statutes of Canada, 1927, chapter 12). This "enabling" legislation was introduced in the provincial Legislature by the Hon. C. J. Arcand, Minister of Labour for Quebec.

Seven of the provinces of Canada have now adopted legislation making the Industrial Disputes Investigation Act fully operative within their respective territories, the only exceptions now remaining being Ontario and Prince Edward Island. It will be recalled that the Judicial Committee of the Privy Council, in a judgment delivered in January, 1925, (LABOUR GAZETTE, February, 1925, page 241) pronounced the Act in its then existing form to be *ultra vires* of the Dominion Parliament in so far as it related to disputes within provincial jurisdiction. The Act was accordingly amended at the parliamentary session of 1925 (LABOUR GAZETTE, June, 1925, page 557), so as to declare that it was to apply to disputes not within provincial jurisdiction, and, in addition, to "any dispute which is within the exclusive legislative jurisdiction of any province and which by the legislation of the province is made subject to the provisions of this Act." British Columbia, in 1925, was the first province to pass enabling legislation, followed next year by Saskatchewan, Nova Scotia, New Brunswick, and Manitoba, and by Alberta in 1928.

### **Methods of arbitration in Australia.**

An account of the Australian system of Arbitration and Conciliation, as amended in 1928, was given in the LABOUR GAZETTE, March, 1929, page 265, and June, 1929, page

582. During 1930 another series of amendments was made in the Conciliation and Labour Act of 1904, in order to meet the opposition of trade unions to certain features of this legislation, and to encourage the use of methods of conciliation rather than arbitration as the means for the prevention and settlement of disputes. The provisions of the new Act form the subject of a new study in the current number of the *International Labour Review* (Geneva), by Mr. Foenander, whose earlier account was quoted in this GAZETTE in 1929. The most important provision of the Act of 1930 is that which relates to the powers of the arbitration commissioners:—

"Should the parties fail to agree, a commissioner may make an order or award that is binding on these parties, and it is within his province to disallow any agreement arrived at by the parties should he consider it detrimental to the public interest. No order or award, however, made by a commissioner can be put into operation until after the expiration of twenty-one days from the making of the order or award, unless by consent of the parties. During the lapse of that period of twenty-one days it is open to either party to lodge an appeal to the Court against any such order or award. . . . In general it may be said that the functions of the conciliation commissioners are confined to what may be reasonably described as the subsidiary problems of industry; the major questions that are likely to evoke grave or acute differences of opinion between employer and employee—e.g., the basic rate of wage and standard hours of work—are withdrawn from their jurisdiction."

The lessons to be drawn from the history of arbitration in the Commonwealth are summarized by Mr. Foenander as follows:—"If there are two distinct major principles to which a quarter-century history of the Commonwealth of Australia Arbitration Court system bears eloquent testimony they are: (1) The supreme difficulty of engrafting an industrial arbitration authority upon a Federal scheme of government; and (2) the difficulty of enforcing the awards or orders of an industrial instrumentality in times when prices and therefore wages are falling."

### **Resignation of Senator Robertson as Minister of Labour**

In the House of Commons on February 5, the Prime Minister announced the resignation of the Hon. G. D. Robertson as Minister of Labour. Tributes to the work of the retiring minister were paid by the leaders in the House

in the following terms: Mr. Bennett said: "I should like to bear tribute to the service rendered to this country by Senator Robertson. A man of great breadth of view, fair-minded, with a warm appreciation and understanding of the conditions of others, and interested in the welfare of humanity to a singular degree, it may be truthfully said that he actually wore himself out in the service of his country. If ever there was a casualty in the conflict against economic conditions you may speak of him as a casualty, for he has been stricken by ill-health through the services he has rendered to Canada."

The Right Hon. W. L. Mackenzie King, speaking on behalf of the Opposition, said: "I am only too ready to join with the Prime Minister in expressing profound sympathy with Senator Robertson, and at the same time my appreciation of the services he has sought to render and has rendered this country while acting as Minister of Labour. I agree that Senator Robertson's breakdown in health has been due to the zealous manner in which he has endeavoured to deal with the great problems of his department, and we all deeply deplore the fact that the strain has been such as to impair his health and make it necessary for him to tender his resignation as Minister of Labour. I am equally sure I speak for all in this House when I say that we hope he will soon be restored to full health and strength and again be in a position to resume his duties as a member of the other chamber."

Similar appreciation of the services of the retiring Minister of Labour has been widely expressed throughout Canada.

#### **Hon. Wesley A. Gordon new Minister of Labour**

By an Order in Council dated February 3, the Hon. Wesley Ashton Gordon, formerly Minister of Immigration and Colonization, was appointed Minister of Labour in succession to the Hon. G. D. Robertson, who had retired. He will continue to discharge the duties of Minister of Immigration and Colonization and of Minister of Mines.

#### **Economy in public administration in Canada**

In the House of Commons on February 8 the Prime Minister announced that in pursuance of the policy of the maintenance of economy in public administration the Government would ask Parliament to pass a statute to reduce by ten per cent the indemnities alike of the Senate and of the Commons, and of the compensation paid to ministers and to every branch of the public service.

Mr. Bennett stated that such a measure was one of those that were essential if the country was to have a balanced budget. "We have determined," Mr. Bennett continued, "that we will have this economy begin with ourselves—although we realize that it may be particularly difficult with some, much more difficult than perhaps the average man realizes—alike in the Senate, the Commons and the civil service of this country, except, of course, the judges, who stand in a somewhat different position. That is what we have determined to do. A saving of between \$7,500,000 and \$8,000,000 will be effected."

#### **Increase of Unemployment throughout the World in 1931.**

*Industrial and Labour Information*, the weekly publication of the International Labour Organization at Geneva, contains in its issue for January 18 the

following note on the unemployment situation in the principal industrial countries as indicated by recent statistics.

"The unemployment situation has become progressively more serious in practically all countries during the last few months. This may be attributed in part to seasonal influences which always lead to an increase in the number of unemployed during the winter months. The situation of the unemployed has consequently become more and more difficult even in countries where a compulsory unemployment insurance scheme exists and far more so in those countries where no adequate scheme or no scheme at all is in force. Some people are of opinion that the cyclical depression has touched the bottom, but even if that be so it is too early yet to say how soon an upward movement may be expected. There is one country which provides an exception to the general rule, namely, Great Britain, where unemployment has been actually falling. As explained elsewhere in this issue, the decrease is due partly to a mere alteration in the number of persons registered at the employment exchanges as a result of changes in the Unemployment Insurance Acts,\* but not altogether; between October 19 and November 23 a real improvement in employment was responsible for a decrease of 68,000 in the number of unemployed out of 122,763, and between November 23 and December 14 the total figure again decreased by 42,500."

A table is given of unemployment figures for a number of countries for different dates in 1931 and the corresponding period of 1930, "These figures," the same publication continues, "show the very serious aggravation of

\*A note on this subject was given in the LABOUR GAZETTE, January, 1932, page 4.

the crisis which took place during the twelve months referred to. In Germany, where the existence of a compulsory unemployment insurance scheme makes the statistics more accurate than in some other countries, the total figure now exceeds 5 million, an increase of about 35 per cent over 1930. For most countries the absolute figures are not a very accurate index of unemployment but it will be noted that in every case there is a large increase as compared with 1930. In France the increase indicated is enormous, but the figures themselves are far below the real amount of unemployment and it must not be assumed that the increase is really anything like as great as 500 per cent. At the same time it will be noted that Belgium, Latvia and New Zealand all show increases of more than 100 per cent.

"One other fact emerges from the table and that is the world-wide character of the unemployment crisis. Several non-European countries are included in the list and all of them show large increases as compared with 1930."

#### **National Economic Council proposed in U.S.A.**

Last May the Chamber of Commerce of the United States appointed a committee on "continuity of business and employment," with instructions to consider "a rational program of production and distribution to be initiated by business itself." This committee, in a report recently issued, suggests among other measures for preventing depressions in future the establishment of a National Economic Council. Such a Council, in their opinion, should be an advisory body rather than a planning board with functions like those of the War Industries Board. It should be so constituted that it would command respect by reason of the ability, integrity, and impartiality of its members, and so staffed that its recommendations could be based and supported with adequate analysis of conditions. The Council might make recommendations regarding such questions as the tendency of productive capacity to outrun ability to buy; the level of wages; foreign trade and the best methods of dealing with international debts; agriculture, transportation and finance. The committee suggests that "in the methods by which industry brings science and engineering to its aid in dealing with physical problems, we have a clue to an appropriate procedure for dealing with economic problems. In its great research establishments, industry has learned how to use and control an effective tool for guiding its engineering advance. It

charges scientists with its problems, supports them with liberality, and acts with courage to make their findings effective.

"We recommend the appointment of a council, preferably of three members, five at the most, to be given the responsibility of organizing a similar attack on our economic problems. The members must be men of the very highest ability and integrity. They must have the experience and background which will enable them to understand sympathetically the circumstances of all the essential elements of our industrial life, but they must think and act for the country as a whole, and be without obligation to any particular constituency.

"We suggest that this council should be appointed by a larger appointing board. The members of this board should be invited to serve by the Chamber of Commerce of the United States and should be representative of some such group of interests as the following:—The United States Department of Commerce, the Chamber of Commerce of the United States, labour agriculture, manufacturing, banking, railroads, public utilities, distributive trades, the law, engineering, and professional economists. The appointments to the council should be made for a three-year term, at the end of which period an appointing board, constituted in the same way, should consider reappointments or changes."

In the *LABOUR GAZETTE*, February, 1931, reference was made to National Economic Councils in various countries.

#### **Proposal to extend work of National Research Council.**

An account is given on another page of this issue of the legislative program recently submitted to the Dominion Government by the Railway Brotherhoods.

In addition to this program the railwaymen's representatives revived a proposal first made on the eve of the special parliamentary session of 1930, to the effect that the functions of the National Research Council, established under legislation of 1927, should be extended by the granting of authority to the Council to conduct scientific investigations into the human factor in industry, the regularization of employment, and the just apportionment of the wealth invested in, and produced by, industry. The Brotherhoods refer to the "important and far-reaching responsibilities and duties assigned to the National Research Council" as likely to bring "tremendous benefits to industry and the Dominion," but regret the omission of social subjects from the scope of the Council's work, as defined in the Act.

### Work of the National Research Council.

In an article appearing in the *Contract Record and Engineering Review*, January 27, Dr. H. M. Tory, President of the National Research Council, Ottawa, describes "what the Council is doing for the construction industry in Canada." "In planning its development," he says, "the National Research Council has kept the construction industry very definitely in mind. The purpose of the Council is to assist in the application of science to industry. . . . The stage has been reached in the Council's development when a comprehensive research program for the construction industry should be envisaged and at the moment of writing we are looking forward to conversations and discussions on the point with its representatives. The Council wholeheartedly offers its facilities to the industry and is ready to co-operate with it in the solution of its problems to the full extent of the available resources."

"In 1920," Dr. Tory continues, "the Council began the organization of National Research Laboratories. Until that time and from its inception during the war years when Germany's supremacy in the application of science became so patent, the Council's work progressed along three main lines—the training of research personnel for industry by the granting of scholarships; the assisting of research men in the universities to attack problems particularly urgent of solution and which the university men were particularly capable of attacking; finally, the co-ordination of research effort already under way and the encouragement of it."

To date 185 researches in various laboratories throughout the country have been made possible or encouraged by the assisted researches policy of the Council. In assisting in the co-ordination of research effort and sponsoring the united efforts of all scientific agencies concerned in the particular problems faced, the Council has acted through associate committees. Some of these are primarily designed to effect close contact with the industry concerned; the others serve a similar purpose but emphasize the additional important purpose of bringing together the representatives of co-operating scientific agencies.

### Unemployment and vocational guidance for young workers.

The London Advisory Council for Juvenile Employment refer in their recent annual report to the increase in unemployment among boys and girls in London, especially those between the ages of 16 and 18 years. They

attribute this increase to the industrial depression, and anticipate that any general improvement would probably bring about a shortage of young workers, notwithstanding the postponement of the date for raising the age limit for school attendance to 15 years. "The Council are encouraged," they state, "by such a prospect to hope that it may constitute the first real opportunity of bringing about more selective choice of employment. During a period when young labour may be in great demand, the school conferences will attain increased importance as a means of influencing the parents as well as the boys and girls in favour of jobs which offer progressive work as distinct from mere high wages. The opportunity may to a large extent be wasted unless ways and means can be found of impressing upon the less thoughtful parents the unusual circumstances by which their children may benefit."

### Priority of claims under Mechanics' Lien Act of Ontario.

The section of this issue dealing with "Recent Legal Decisions" includes an outline of the decision of the Ontario Court of Appeal in the case of *Inglis versus Queen's Park Plaza Company*. This decision affects the respective status of bond mortgages and mechanics' liens, the court holding that such mortgages have priority only when secured before the registration of liens. According to press reports this decision resulted in "bringing to a standstill" construction works in Ontario that were to be financed by building loans; and shortly after it was rendered, the County of York Law Association decided to ask the provincial government to amend the Mechanics' Lien Act by defining more clearly the rights of mortgage companies and private investors.

### Recent power development in Canada.

The January issue of *Industrial Canada*, the official monthly publication of the Canadian Manufacturers' Association, contains a series of articles describing the recent developments of electrical power in the Dominion. "From humble beginnings," it is stated, "the central station industry has expanded into a great and complex organism, embracing plants of huge size and intricate and complicated mechanism. Canadian engineering skill has kept pace with the growth of the industry and Canadian manufacturers have been able to design and build most of the great machines which are now required in power development. This has served to retain millions of dollars in the country, much of which has

gone into wages and has thus kept up employment."

In a general review of recent progress, Mr. J. T. Johnston, Director of Dominion Water Power, Ottawa, says: "The production and distribution of power has caused the mechanization of the world, and this has been the most intensive where power has been abundantly available at low cost. Exclusive of transport machines, the most convenient power medium is electricity, and every country utilizes its most easily and cheaply developed sources of energy for the production of electrical power. In Canada the principal source is water power because it is available in large quantities and at convenient locations practically throughout the Dominion, and further, the power can be produced, in the main, more cheaply than by any other means. It was not until the opening of the century that electrical science had progressed to the stage where electrical energy could be produced in large quantities at a single site and then be transmitted sufficiently widely to ensure its complete and beneficial utilization. When this stage was reached, however, the large water power sites in the Dominion assumed great economic value and their development began, and has continued with a growing momentum up to the present, with as yet no sign of slowing down."

According to the annual statement for 1931 of the Dominion Water Power and Hydro-metric Bureau, Department of the Interior, the estimated capital expenditure in the development, transmission and distribution of the new power developed last year was at least \$110,000,000. Further, it was calculated that over \$280,000,000 would be required to bring to completion the projects at present actively under construction. It is pointed out that these large expenditures in the development of one of Canada's most important natural resources are most timely in providing employment to thousands of citizens in a great many lines of endeavour.

The power developments in each province and section of Canada are described by experts in this issue of *Industrial Canada*, their significance for the future of Canadian industry being indicated.

#### **Benefit of machinery on the farm.**

A resolution was submitted to the recent annual convention of the United Farmers of Alberta calling for a weekly half holiday for the farming industry during the summer months. The *Edmonton Journal*, in its issue of January 15, commented on this proposal as follows:—

"Unlike the urban issue, it appears that it is not because the farmer needs a weekly half-day of rest from his labours, but because he has a fair amount of 'idle' time on his hands, that the proposal is made. The farmer once upon a time arose before dawn and slaved until long after dark. Machinery has changed all that. Now he has leisure. Moreover, he can flit into town in twenty minutes in his automobile. Further, the farmers have built themselves community halls and there are picnic areas scattered at handy intervals. The idea, it appears, is that all farmers should take their leisure simultaneously and gather in these places for 'trade talks' and social diversions. It is explained that not only would farmers attend, but that as work in town and on the farm would cease together, the whole community could meet. Norman F. Priestly, vice-president of the United Farmers of Alberta is quoted as saying: 'Farm life has changed. The farmer has more time on his hands and is beginning to take an interest in community life. He is changing from a farmer into a citizen.'"

#### **Methods of stimulating production in Soviet industry.**

Mr. Weinberg, assistant secretary of the General Council of Trade Unions of Soviet Union, recently delivered a speech, quoted in *Industrial and Labour Information* (Geneva) December 28, on the political and economic situation and the tasks now facing the trade unions in the Soviet Republics. He pointed out that while the petrol and electrical engineering trades had already completed the program laid down in the Five-Year Plan, the progress made by heavy industry had not been so rapid as the economic interests of the country required. The difficulties encountered in industry and in the transport services, he stated, were mainly due to inadequate organization, the absence of personal responsibility, the equalization of wages, faulty management, and a relaxation of labour discipline.

It was therefore, Mr. Weinberg proceeded, the duty of trade unions to take energetic measures to improve the organization of production, and in order to promote better organization and a more rational use of labour. He recommended that trade unions should take further steps to increase socialistic competition, especially by the introduction of squads of workers employed at collective job rates, and by the organization of competitions between different undertakings and between the various workshops in the same establishment. The former trade union leaders, he claimed, had imagined that it was impossible

for the unions to take steps to ensure the profitable working of undertakings and at the same time to protect the economic interests of the workers. The new leaders were convinced, on the other hand, that it was by taking an active part in the development of industry that the workers could best improve their situation.

### **Restricted immigration to United States.**

The striking reduction that has occurred in the volume of immigration to the United States during the past year is shown in one of the chapters of the annual report of the United States Secretary of Labour for the fiscal year 1930-1931, which is summarized in the *Monthly Labour Review* (Washington) as follows:—

“Fewer immigrants are now being admitted than at any time during the past hundred years. Only one immigrant is admitted now where five were admitted a year ago. Still more striking is the comparison of June, 1931, with June of 1913, when under the open-door policy then prevailing, 176,262 immigrants were admitted, as against 3,534 for June, 1931. Virtually fifty times as many were given entry for June, 1913, as for June, 1931. In the Secretary's opinion there is no more important work before the Government and the people to-day than the administration of the immigration laws. These laws have a two-fold purpose: (1) to protect the social and political structure of American civilization from persons who seek to come here with strange, new doctrines of government which threaten the institutions and practices that we in this country regard as essential to the onward progress of our people, whether native born or naturalized; and (2) to give economic protection particularly as to available employment, to those who for both legal and moral reasons should receive first consideration in the blessings of the workaday life. There are in this country many aliens who have come here illegally. No reasonable estimate of this number can be made, but the number of illegal entrants has been materially checked through the activities of the immigration border patrol.

“During the fiscal year ending June 30, 1931, more than 18,000 aliens were formally deported. Many thousands of others who might have been expelled were permitted to depart voluntarily.”

### **Six-hour day as a permanent operating policy.**

The advantages of a short working day are set forth by Mr. Lewis J. Brown, President of the Kellogg Company, of Battle Creek, Michigan, in a pamphlet entitled “What of the Six Hour Day?” The Kellogg Company adopted the six-hour day on December 1, 1930, as an emergency expedient to relieve the unemployment situation in Battle Creek, but it is likely to become a permanent operating policy. The employees of the Company formerly worked 8-hour shifts a day, with a half-hour period in each shift for meals, the rate of pay being slightly different for each shift. A tendency was noticed for employees on the 8-hour day to slow down before meal time, and the “pick-up” after meal time was always slow. By the new arrangement of four 6-hour shifts there are no inequalities, no extra allowances being necessary for any shifts; and no stop is made for meals, as each shift works straight through without a break. “In working a 6-hour shift,” Mr. Brown states, “the employee starts out and works steadily at full capacity for six hours, and in doing so naturally increases the per-hour production efficiency at his task or station during those six hours. Then he stops and has 18 hours for rest and recreation, and his task or station is taken over by another worker, fresh from 18 hours of rest and recreation.”

As to the effect of the new system on wages Mr. Brown says: “In reducing the number of working hours a day, under the six-hour day plan, there was naturally a reduction in the day wages for the higher-paid employees. In fact, there are two hours less work, or 25 per cent less actual working time.

“Our company made a study of what the daily wage should be for an employee to give him approximately the same purchasing power as he had had two years ago, when commodity prices were much higher. It was found that if we increased the base rate of the employees 12½ per cent, their purchasing power would be, when operating six hours a day, six days a week, approximately the same as it was in 1928.

“An investigation was also made of the minimum daily wage a male employee should have in order to provide himself and family with a proper living. As a result, it was decided that the minimum wage for a male employee should be \$4 per day, this being the same rate we were paying when operating on the eight-hour basis—a minimum wage

of 50c. an hour, or \$4 for an eight-hour day. Thus, in working on a six-hour-day basis, the base rate for the minimum wage of an employee was increased 33½ per cent. While those receiving a higher wage received a 12½ per cent increase in base rate."

"It seems probable," Mr. Brown observes in conclusion, "that American business will shortly face the need of providing for a shorter working day, and at a wage providing for a decent American standard of living, if we are to keep our people busy and stabilize our prosperity. Some such formula as the six-hour day may force itself upon us."

#### **U.S. Employees' Compensation Commission.**

The 15th annual report of the United States Employees' Compensation Commission describes the administration, during the fiscal period ended June 30, 1931, of the three compensation laws in charge of the Commission. The first of these laws is the United States Employees' Compensation Act, the administration of which was for ten years the sole function of the Commission; it provides for the compensation of civil employees of the United States who have been injured in the performance of their official duties. Additional duties were placed upon the commission in 1927 as a result of the enactment by Congress of legislation extending workmen's compensation benefits to employees in certain maritime employments, and again in 1928 as a result of the enactment of further legislation providing compensation for employees of private industry in the District of Columbia.

The report therefore gives an account of the Commission's work in connection with these three acts, namely the United States Employees' Compensation Act, 1916, the Longshoremen's and Harbour Workers' Compensation Act, 1927, and the District of Columbia Workmen's Compensation Act.

A scheme for the amalgamation of two British trade unions, the Tailors' and Garment Workers' Union and the Amalgamated Society of Tailors and Tailoresses, was recently drawn up and in accordance with British law was submitted for ratification to a ballot vote of the members of both unions on December 11, 1931. It was reported that 79.49 per cent of the members of the Amalgamated Society of Tailors' and Garment Workers' Union voted in favour of the proposal. It is anticipated that when the amalgamation has been effected the membership of the new organization will be about 100,000.

The State of Connecticut, in 1929, appointed a commission to study pension systems for the State, counties and municipalities. This Commission recently published their report. As regards pensions for State employees, they recommend that the non-contributory system which has existed for eleven years should be replaced by one which recognizes "the obligation upon the individual to take up his burden for the future."

Legislation has been introduced in the Quebec Provincial Legislature by the Hon. Hector La Ferté, Minister of Colonization, to confer power on the government to buy up farm lands sold or for sale for taxes, provided that the cost is not in excess of \$100 in all, or of \$5 per arpent (about .85 of an acre).

During the month of January a total of 2,813 accidents were reported to the Ontario Workmen's Compensation Board in the industries in Schedule 1 of the Act, 9 of which were fatal cases; in Schedule 2 industries 248 were reported including 2 fatal cases; and 540 accidents to employees of the Crown, 8 of which were fatal, were reported during the month making in all 3,601, of which 19 were fatal.

The *Manitoba Gazette*, January 23, contained a notice announcing that the Minimum Wage Board Regulations governing female employees in places of amusement in Winnipeg, St. Boniface, and St. James, and regulations governing female employees in Furliers' Establishments in Winnipeg and St. Boniface shall be deemed now to apply to Brandon, Manitoba.

Several philanthropic bodies in Great Britain have organized relief plans supplementary to the provisions undertaken by the State in order to counteract the deteriorating effect of prolonged unemployment on workers in Great Britain. Among these, the Society of Friends is arranging to provide 100,000 unemployed men with vegetable seeds and tools to cultivate small truck gardens of their own this year. The scheme provides every unemployed man, who is willing to cultivate a plot of garden ground varying from 300 to 600 square yards, with the requisite seed potatoes, vegetable seeds, lime and fertilizers and tools for \$1.68, compared with the retail price of \$4.15. Payment for the seeds is permitted on the instalment plan of a few pennies every week. Ownership of land is not necessary. The allotment acts of 1921, 1922 and 1926 provide that when any six men appeal to the local authorities for land to cultivate, the local authorities must obtain and make it available to them.

## GENERAL REVIEW OF THE INDUSTRIAL SITUATION

### Employment

THE employment situation throughout Canada at the end of January was reported by the superintendents of the Employment Service of Canada to be as follows:—

There was no demand for farm help in the Province of Nova Scotia, but a number of farmers were busy hauling wood and building fishing boats for the spring season. No heavy catches of fish were reported. Lack of snow proved a serious handicap to lumbermen; consequently very little activity was reported in this industry. Coal mines in the New Glasgow zone operated from three to six days per week, while the majority of those in Cape Breton Island worked only two days during the last week of January. All bakeries and food manufactories reported business as good, confectionery as fair. Breweries, and iron and steel plants were on short time, and in some departments in the latter industry idleness prevailed. At Halifax, practically all building was completed, resulting in the unemployment of many skilled and unskilled workers, but relief work was still provided for about 100 men. Extension to the public wharf continued at New Glasgow, but this labour was also supplemented by civic street and sewer work. Transportation was fair, also trade. Completion of January clearance sales under the latter division caused some retail houses to reduce staffs. Collections were slow. There was a continued demand for domestics and charworkers, with many placements made.

Few orders for farm workers were listed in the Province of New Brunswick, but farmers were busy hauling wood and storing ice. Owing to unfavourable weather, little fishing was done. No demand existed for bushmen, due in part to lack of snow in the woods. Manufacturing showed some improvement at Chatham, while at Moncton conditions were fair only, and at Saint John all factories were working short time with reduced crews. In the latter city the Board of Trade was endeavouring to secure the opening up of a new industry. Little new building construction was taking place, and some projects were rapidly nearing completion. Transportation and trade were fair. Waterfront work, however, was very quiet, and many longshoremen were idle. Several satisfactory placements were made in the Women's Domestic Division.

Practically no orders for farm help were received by Quebec employment offices.

Logging also was quiet nor was any activity reported in mining, although it was expected that operations might soon start in one section, which would furnish employment to about 200 men. A slight improvement was noticed in several of the manufacturing districts, particularly at Montreal, due to the re-opening of a railway car shop which had been closed for some time. No change was apparent, however, at Quebec, where industries were still not working at their full capacity. Hull and Montreal were the only cities to report better conditions in building construction. Elsewhere, building trades were dull, and relief work was of necessity provided to alleviate the situation. Transportation was quiet and trade somewhat brighter. Satisfactory placement of female domestic workers continued, though at Hull, placements had declined.

Few farm orders were received by employment offices in the Province of Ontario, as the season was not yet far enough advanced for any activity to be shown in this group. Tie-makers were in demand at North Bay, and pulpwood cutters at Fort Frances and Sudbury, but Timmins reported the demand for bushmen as negligible. The mines were not taking on new men and were apparently full-staffed. The auto industry at Windsor showed a slight improvement, and conditions were good in the textile plants at Hamilton, with a marked improvement in some aspects of factory work. Brantford, also, had some optimistic features about industrial activities in that city. Building construction continued at a standstill, and only relief work and highway construction afforded any opportunity for employment in this line. Enquiries in the Women's Domestic Section were already being made for work at summer resorts. Both clerical and industrial orders showed an increase at Toronto. The main problem, however, is that of elderly applicants, who, though excellent workers, are hard to place.

The demand for farm workers in Manitoba continued good for the season of the year. Placements in this industry, however, consisted largely of men who had been receiving city relief. A marked increase in calls for pulp and cordwood cutters and tie-makers was in evidence at Winnipeg, and some difficulty was experienced in getting sufficient skilled men of the latter class. There was no activity in mining. Manufacturing was fair, also trade. Building permits for the City of Winnipeg were much below the figures for the

## MONTHLY STATISTICS REFLECTING INDUSTRIAL CONDITIONS IN CANADA

(Official Statistics except where noted)

(4) Figures for end of previous months.

(5) Figures for four weeks ending January 30, 1932, and corresponding previous periods

(6) Sugar production given in periods of four weeks ending December 31, December 5 and January 31, 1931, also December 31 and December 5, 1930.

(14) The index of the physical volume of business includes forestry, mining, construction, manufacturing, trade, imports, exports, car loadings, shares traded and bank debits. Industrial commodity production includes forestry, mining, manufacturing and construction. Manufacturing includes production of flour, sugar, newsprint, pig iron, steel and automobiles; imports of cotton, rubber, wool and petroleum; slaughtering of cattle, sheep and hogs; storage holdings of butter and cheese.

corresponding month of the past three years, although weather conditions had proved more favourable for outside building than for many winters. The number of men required for relief undertakings was also less than formerly. A sharp reduction was registered in the work of the women's section, fewer workers being placed both at domestic employment and day work.

In Saskatchewan, few men were availing themselves of the opportunity of going out under the Farm Relief Scheme. This was partly due to the fact that many of the men were not warmly enough clad, and also, that few men seemed to be looking for that class of work. A few bushmen were sent out from Prince Albert to Prairie River, and placements in lumber camps were also made from Yorkton, but these were the only orders received. Construction was quiet, and a large number of applicants still remained unplaced. Relief camps remained open and some workers sought employment there. Improvement was recorded in the Women's Section, with a steady demand for farm domestics and housekeepers.

Very few registrations or vacancies were reported in farming in the Province of Alberta, and little improvement was looked for before spring. Conditions in logging were fairly good, with a few orders listed. Mines at Drumheller and Lethbridge were operating only a few days per week, but at Edmonton the majority were working steadily with a fair demand for men. Manufacturing industries continued quiet. Construction, both building and railroad, was inactive, and no new projects of any kind were in sight. Relief work in rotation was still being provided by the different communities for general labour. Business of every kind was slack, and practically all wholesale and retail establishments were working with skeleton staffs. There was only a small demand for maids and casual women domestic workers, with an increase of registered applicants.

Farming in the Province of British Columbia was exceptionally quiet, and little orchard work was being done owing to the extremely cold weather. The outlook in the logging industry in some sections appeared more promising, but little active work was in evidence at the end of January. Mining reported no new activity. Manufacturing generally was quiet, but a few small sawmills were in operation at Cranbrook. General building construction remained slack, and unemployment relief work in some centres had ceased, the more destitute cases being cared for by direct relief. Snow shovelling, at

Vancouver, had helped the situation somewhat, but only for a very limited time. Longshoremen secured some work at New Westminster, but quietness prevailed at Vancouver and Prince Rupert, although the machine shop at the drydock in the latter city was fairly busy on repair work for fishermen and others. Trade was dull and collections slow. No improvement in conditions in the Women's Domestic Section was reported. Few orders were received and a large surplus of applicants was available for all classes of work.

The seasonal curtailment in employment registered at the beginning of January, 1932, was rather larger than that reported on January 1, 1931, but approximated the average loss indicated at the opening of the preceding ten years. Employment was at a lower level than on the same date in the years 1927-1931, although it was higher than on January 1 of any of the preceding six years of the record. The Dominion Bureau of Statistics tabulated returns from 7,832 firms whose payrolls declined from 904,492 persons on December 1, to 835,960 at the beginning of January. Reflecting this contraction, the index (based upon the 1926 average as 100) stood at 91.6 on January 1, 1932, as compared with 99.1 in the preceding month, and with 101.7, 111.2, 109.1, 100.7, 95.9, 90.7, 84.9, 89.8, 87.3, 78.8, and 88.8 on the same date in 1931, 1930, 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921 respectively.

All provinces recorded declines, those in Quebec and Ontario being most extensive. In the Maritime Provinces, the decrease took place chiefly in manufacturing and construction, but logging and trade were also slacker. On the other hand, transportation showed seasonal improvement with the opening of the winter ports. In Quebec, manufacturing, construction and transportation reported especially pronounced losses, but the trend was also unfavourable in mining and logging, while improvement was noted in retail trade. In Ontario, manufacturing, construction and transportation registered the greatest losses, and there were smaller declines in logging, mining and communications. Retail trade, on the other hand, recorded a slight advance. In the Prairie Provinces, construction reported the most noteworthy decrease, but manufacturing and transportation also showed important losses; in addition, mining, communications, services and wholesale trade were slacker, while logging indicated seasonally increased activity. In British Columbia, lumber, vegetable food, electric current and non-ferrous metal factories, logging and construc-

#### EMPLOYERS' REPORTS

tion recorded decided curtailment, while there were small gains in transportation and mining.

There were contractions in seven of the eight cities for which separate tabulations are made, firms in Montreal, Quebec City, Toronto, Ottawa, Hamilton, Winnipeg and Vancouver reporting reduced employment, while heightened activity was indicated in Windsor and the adjacent Border Cities as a result of work undertaken for the relief of unemployment. In Montreal, important declines were noted in transportation, construction and manufacturing, while retail trade was seasonally busier. In Quebec City, manufacturers reported losses in employment, and construction and transportation were also slacker. In Toronto, there were contractions in manufacturing and also in construction and transportation, but retail trade reported considerable improvement. In Ottawa, manufactures and construction indicated seasonal curtailment, and trade also afforded less employment. In Hamilton, manufacturing and transportation showed reduced activity, while highway construction and services reported improvement. In Windsor and the adjacent Border Cities, manufacturing was seasonally dull, but unemployment relief works resulted in a large gain in construction. In Winnipeg, manufactures registered declines, but construction showed improvement. In Vancouver, employment in manufactures, construction and trade showed a falling-off since the preceding month, while other groups did not report much change.

An analysis of the returns by industries shows contractions in all groups except retail trade, the losses in manufacturing, construction and transportation being most noteworthy.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of January, 1932.

#### TRADE UNION REPORTS

The slackness which generally occurs in a number of trades and industries with the winter season was in evidence during December, according

to reports received from 1,874 local trades unions, and although the falling-off from November was not as large as in 1930 the unemployment percentage at the end of December was the highest yet recorded. The reporting locals had a combined membership of 188,553 persons, of whom 39,713 were without work at the end of the month, a percentage of 21.1, in contrast with 18.6 per cent of idleness at the end of November and with 17.0 per cent in December, 1930. All provinces except Manitoba and New Brunswick shared

in the unfavourable situation shown in comparison with November, the decline in Quebec, which was 7 per cent and chiefly due to slackness among garment workers, being the largest. The unemployment increases in the other provinces were from 0.6 per cent to 2.5 per cent. Manitoba unions reported 1.8 per cent more employment, and New Brunswick a nominal gain of less than 1 per cent. Higher percentages of unemployment were reported by unions in all provinces when comparison is made with December, 1930, the increases in Quebec and Nova Scotia being the largest. Under this comparison lumbering and fishing were the only industrial groups to show improved conditions, whereas the manufacturing industries and building construction showed the largest declines.

In another section of this issue will be found a report in greater detail on the unemployment situation among local trade unions at the close of December, 1931.

#### EMPLOYMENT OFFICE REPORTS

During the month of December, 1931, the offices of the Employment Service of Canada made 37,021 references of persons to positions and effected a total of 35,747 placements. Of these, placements in regular employment numbered 14,343, of which 11,544 were of men and 2,799 of women, while placements in casual employment numbered 21,404. The offices of the Service also received notification of 36,867 vacancies during the period under review, of which 29,969 were for men and 6,898 for women. Applications for employment were registered from 45,104 men and 8,781 women, a total of 53,885. Compared with the preceding month and also with December a year ago, a decrease was shown in the volume of business transacted, the records for November, 1931, showing 44,113 vacancies offered, 71,483 applications made and 43,326 placements effected, while in December, 1930, there were recorded 55,675 vacancies, 74,171 applications for work and 54,751 placements in regular and casual employment. In another section of this issue will be found a detailed statement of the work of the offices for the month of December, 1931, and also for the quarterly period, October to December.

#### BUILDING PERMITS AND CONTRACTS AWARDED

According to a report prepared by the Dominion Bureau of Statistics, the value of permits issued in 61 cities in Canada during December, 1931, was \$7,397,984 as compared with \$7,992,815 in the preceding month, and with \$15,440,281 in December, 1930.

The *MacLean Building Review* states that new construction contracts for January show an increase of thirteen per cent over the December figures. The total for the past month was \$12,738,300. Of this total, \$4,944,900 was for business buildings; \$4,720,500 was for engineering purposes; \$2,700,500 was for residential buildings, and \$372,400 was for industrial purposes. The apportionment of contracts awarded during January, 1932, by provinces was as follows: Ontario, \$6,347,100; Quebec, \$2,820,400; British Columbia, \$1,249,100; Alberta, \$1,139,900; Saskatchewan, \$536,600; New Brunswick, \$309,700; Manitoba, \$229,500; Nova Scotia, \$86,000; Prince Edward Island, \$20,000.

### Production and Trade

INDUSTRIAL PRODUCTION Figures showing the volume of production in certain industries during recent months and also in the corresponding months last year are shown in the table on page 118.

The *Monthly Review of Business Statistics*, published by the Dominion Bureau of Statistics, in a review of the business situation in Canada during the past year, states as follows: "Reactionary tendencies were predominant during 1931, continuing the economic depression in evidence for more than two years. During the early months moderate improvement was shown, but the marked decline culminating so far as the year was concerned in December, led to low levels in industrial production and security prices. The decline in bond prices was one of the chief reactionary factors in the latter part of the year. A constructive development was the moderate strengthening in commodity prices during the last quarter.

The index of industrial production showed a decline in December compared with the preceding month, gains in manufacturing and mining being offset by declines in forestry and construction."

**Coal.**—In December, Canadian coal mines produced 1,194,346 tons, a falling-off of 26.2 per cent from the 1926-1930 average for the month of 1,618,763 tons. Compared with the corresponding month of 1930, the decline was only 7 per cent. The December output consisted of 750,683 tons of bituminous coal, 390,576 tons of lignite coal, and 53,087 tons of sub-bituminous coal. Mines in Nova Scotia produced 375,773 tons; in New Brunswick, 19,197 tons; in Saskatchewan, 102,663 tons; in Alberta, 508,900 tons; and in British Columbia, 187,813 tons.

Coal imported into Canada during December amounted to 1,025,187 tons as compared

with the five-year average for the month of 1,466,605 tons. Anthracite imports during the month declined to 179,875 tons and included 168,655 tons from the United States and 11,220 tons from Great Britain. Receipts of bituminous coal consisted of 828,501 tons from the United States and 16,090 tons from Great Britain. Lignite imports were recorded at 721 tons cleared through British Columbia ports.

Canadian coal exports continued at a low level and amounted to 42,407 tons, or 6.14 per cent below the average for December in the past five years. The December exports were consigned to the United States, Newfoundland, Alaska, Brazil, Great Britain, France, St. Pierre and Miquelon, the Netherlands, Greece and Cuba.

Based on output, imports and exports data, the tonnage of coal made available for consumption in December totalled 2,177,126 tons, a decline of 26.8 per cent from the 1926-1930 average for the month of 2,975,373 tons. During the month under review the United States supplied 45.8 per cent of the coal made available for use, Canada, 52.9 per cent and Great Britain, 1.3 per cent.

Output during the calendar year 1931 amounted to 12,211,699 tons as against 14,881,324 tons in 1930 and 17,496,557 tons in 1929. Imports into Canada totalled 13,531,831 tons made up of 3,178,141 tons of anthracite coal, 10,347,280 tons of bituminous coal and 6,410 tons of lignite coal. Exports during the year included 336,302 tons of bituminous coal, and 23,551 tons of lignite coal. Canada's coal supply for the year was computed at 25,383,677 tons; in 1930, the total was 31,876,886 tons.

EXTERNAL TRADE A summary of Canadian Trade prepared by the Department of National Revenue shows that in December, 1931, the merchandise entered for consumption amounted to \$40,289,795 as compared with \$46,911,012 in the preceding month, and with \$60,337,934 in December, 1930. The chief imports in December, 1931, were: Non-metallic minerals and products, \$7,208,743; Iron and its products, \$5,881,087; Agricultural and vegetable products, mainly foods, \$5,769,899.

The merchandise exported during December, 1931, amounted to \$53,255,476 as compared with \$57,486,950 in the preceding month and with \$66,819,668 in December, 1930. The chief exports in December, 1931, were: Agricultural and vegetable products, mainly foods, \$19,958,479; Wood, wood products and paper, \$13,974,194; Non-ferrous metals and their products, \$6,890,961.

### Strikes and Lockouts

The time loss due to industrial disputes in January, 1932, showed a decline from the previous month, a similar decline appearing in the number of workers involved, due largely to the fact that only eleven strikes or lockouts were recorded as compared with fourteen the preceding month. In comparison with figures for January, 1931, an increase was recorded in the number of strikes and lockouts which occurred, a corresponding increase appearing in the number of workers involved and in the time loss incurred. There were in existence during the month eleven disputes, involving 1,044 workers, and resulting in a time loss of 10,729 working days, as compared with fourteen disputes, involving 1,258 workers and resulting in a time loss of 15,649 working days in December. In January, 1931, there were on record nine disputes, involving 768 workers, and resulting in a time loss of 7,558 working days. At the end of the month there were on record six disputes involving approximately 340 workers. These figures do not include those strikes and lockouts in which employment conditions were no longer affected but which had not been formally called off by the union.

### Prices

The average cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in sixty-nine cities was lower at \$7.68 for the beginning of January as compared with \$7.85 for December, 1931; \$9.86 for January, 1931; \$11.88 for January, 1930; \$11.30 for January, 1929; \$11.03 for January, 1922; \$16.92 for June, 1920 (the peak); \$15.30 for January, 1920; and \$7.73 for January, 1914. The most important change was a substantial fall in the price of eggs. The prices of fresh and salt pork, bacon, lard, cheese, evaporated apples and tea were also lower. The prices of beef, butter and potatoes were slightly higher. Including the cost of fuel and rent with that of foods the total budget averaged \$17.59 at the beginning of January, as compared with \$17.76 for December, 1931; \$20.21 for January, 1931; \$22.17 for January, 1930; \$21.55 for January, 1929; \$21.52 for January, 1922; \$26.92 for July, 1920 (the peak); \$24.15 for January, 1920; and \$14.49 for January, 1914. Fuel and rent were practically unchanged.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics based upon prices in 1926 as 100 was again lower at 69.4 for January, as compared with 70.3 for December, 1931; 76.7 for January,

1931; 95.3 for January, 1930; 94 for January, 1929; 97.1 for January 1922; 164.3 for May, 1920 (the peak); 149.4 for January, 1920; and 64.9 for January, 1914. In the classification according to chief component materials five of the eight main groups were lower, two were higher and one was unchanged. The groups which declined were: the Animals and their Products group, because of lower prices for steers, cured meats, milk, butter, cheese and eggs, which more than offset higher prices for calves, hogs, lambs and canned salmon; the Wood, Wood Products and Paper group, owing mainly to reduced quotations for maple lumber and sulphite pulp; the Iron and its Products groups, because of lower prices for steel tank plates and automobile body plates; the Non-Metallic Minerals and their Products group, due to declines in the prices of domestic coal, sulphur and building stone; and the Chemicals and Allied Products group, because of declines in the prices of certain tanning materials and white and red lead. The Vegetables and Vegetable Products group was slightly higher, advances in the prices of oats, rye, oatmeal, rolled oats, coffee and onions more than offsetting lower prices for flax, barley, wheat, flour, bran and shorts. The Non-Ferrous Metals and their Products group was also higher, due to advances in the prices of tin, copper and copper wire which more than offset lower prices for aluminium, lead and silver. The Fibres, Textiles and Textile Products group was unchanged, advances in the prices of certain manufactured cottons and of silk thread offsetting declines in the prices of raw jute, raw silk, raw wool and woollen blankets.

### Reduction in Number of Industrial Accidents in Ontario in 1931

The summary figures for workmen's compensation in Ontario for the year 1931 shows a total of 52,894 accidents reported to the Board during the year, a decrease of 16,373 from the accidents during the prior year. The fatal accidents numbered 339, as compared with 520 during 1930.

The total benefits awarded during the year amounted to \$6,021,329.10, as compared with \$7,423,018 during 1930, the 1931 figures being made up of \$4,960,629 for compensation and \$1,060,763 for medical aid. Taking a basis of 300 working days this would show average daily benefits awarded of \$20,071 requiring an average of 772 cheques per day. There was a decrease in the average number of new claims reported daily from 231 in 1930 to 176 in 1931.

## RECENT PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

**D**URING the month of January an application for the establishment of a Board of Conciliation and Investigation under the provisions of the Industrial Disputes Investigation Act was received in the Department of Labour from the Hull Electric Company. The dispute arose in connection with a proposed 10 per cent wage reduction, the employees concerned, 82 in number, being motormen, conductors, trackmen, etc., members of Division No. 591, Amalgamated Association of Street and Electric Railway Employees of America. At the close of the month conferences were being held by departmental officials with the representatives of the employees and the general manager of the company, looking to an amicable settlement of the dispute without the necessity of board procedure.

Reference was made in the January issue of the *LABOUR GAZETTE*, page 15, to the establishment of a board to deal with a dispute between the Canadian Pacific Railway Company and certain of its employees being clerks, freight handlers and station employees and various subsidiary groups. On January 19 the board was completed by the appointment of the Honourable Mr. Justice R. A. E. Greenshields, of Montreal, P.Q., as third member and chairman, the appointment being made by the Minister in the absence of a joint recommendation from the other board members, Mr. Errol M. McDougall, K.C., and Professor J. T. Culliton, both of Montreal, nominees of the company and employees, respectively. The dispute relates to a proposed 10 per cent wage reduction directly affecting 5,000 employees. Board hearings were in progress at the close of the month.

The January issue of the *LABOUR GAZETTE* contained the texts of the majority and minority reports of the Board of Conciliation and Investigation which dealt with a dispute between the Winnipeg Electric Company and certain of its employees being motormen, conductors, busmen, mechanical department employees, trackmen and gas work employees, members of the Street Railway Employees' Units of the One Big Union. The board consisted of Mr. W. J. Christie, of Winnipeg, chairman, and Messrs. Ernest T. Leech, K.C., and R. B. Russell, both of Winnipeg, representing the company and employees, respectively. The report of the board, which was signed by the chairman and Mr. Leech, supported the employer's request for a 10 per cent wage reduction. The company indicated

its willingness to accept the board's award, which was, however, rejected by the men. Direct negotiations were subsequently reopened and continued for some weeks. A settlement not having been reached on January 7, the street railway employees voted five to one in favour of a strike. At this stage the threatened tie-up was averted by the intervention of His Worship the Mayor of Winnipeg. Mr. M. S. Campbell, Chief Conciliation Officer of the Department, also spent some days in Winnipeg and was in close touch with the Mayor and with both sides to the dispute. Negotiations proceeded from time to time and on January 27 word reached the Department that the gas work employees had made a separate agreement with the company accepting the 10 per cent reduction commencing February 1. A couple of days later the Department was notified that an agreement had been reached between representatives of the Winnipeg Electric Company and its street railway employees, under the terms of which the men are to work eight hours per day from December 1 to April 30 at the 10 per cent wage reduction, and seven hours per day from May 1 to November 30 at 3½ per cent reduction, making an average wage decrease for the year of approximately 6 per cent. When a copy of the agreement is received in the Department a summary will be given in the section of the *LABOUR GAZETTE* regarding Industrial Agreements.

Reference was also made in the January issue of the *LABOUR GAZETTE* to an application for the establishment of a Conciliation Board received from certain employees of the Winnipeg Electric Company, being members of Locals Nos. 1037 and 435 of the International Brotherhood of Electrical Workers. A wage reduction of 10 per cent proposed by the company and directly affecting 67 employees was stated to be the cause of the dispute. The Chief Conciliation Officer of the Department, Mr. M. S. Campbell, discussed this matter with the parties concerned in Winnipeg and as a result of his mediation direct negotiations took place at which a three-year agreement was reached providing for reductions effective February 1, 1932, as follows: 10 per cent in the wages of men whose employment is continuous in character, and 7 per cent in the wages of men subject to lay-off from time to time, the understanding being that one-half of this reduction in wage rate shall be restored for the year commencing February 1, 1933, and the other half restored on Febru-

ary 1, 1934, "provided, however, that if during January, 1933, or January, 1934, general conditions are such that in the opinion of the company this restoration is not warranted, the company may notify the organization that such restoration will not be made; whereupon the wage scale for the ensuing year shall be determined by conference and mutual agreement or otherwise." The application was thereupon withdrawn by the employees.

The wage dispute between the Canadian National Railways and Canadian Pacific Railway and subsidiary railways on the one hand and their locomotive engineers, locomotive firemen and hostlers, conductors, trainmen and yardmen, and telegraphers, assistant agents and linemen on the other hand, was amicably settled on February 4 following

several weeks' negotiations between the railway officials and the representatives of the employees. A Board of Conciliation and Investigation dealt with this dispute, the text of the board's findings appearing at page 1293 of the December issue of the LABOUR GAZETTE. The agreement gives effect in principle to the board's recommendation and provides for a 10 per cent deduction from each employee's pay cheque, the basic rate of pay to remain unchanged and the agreement to become effective as from December 1, 1931 (not November 15 as recommended by the board), and to continue in force until January 31, 1933, unless business conditions have not sufficiently improved. Particulars concerning this settlement will be found in the article following.

## SETTLEMENTS OF DISPUTES AS TO WAGES ON RAILWAYS IN CANADA AND THE UNITED STATES

**D**URING the closing months of 1931 the railway companies proposed to representatives of various employees' organizations that reductions in rates of wages specified in the agreements should be made owing to the decreases in traffic and in operating income. Previously reductions in numbers employed had been made as traffic decreased, and during the spring and summer months arrangements were made to reduce the number of hours worked in order to spread employment over as many as possible of the staff, those on the mileage basis voluntarily agreeing to reduce the mileage run per month in order to afford some work to engine and train crew employees on the spare list or laid off.

In July, on the two principal railways in Canada, the salaries of officials were reduced ten per cent, and office employees not under union agreements were laid off three days per month without pay, thus effecting a ten per cent decrease in expenses for salaries. In October the railway companies proposed to the representatives of the employees in engine, train and telegraph service that a ten per cent deduction from pay on the existing rates under agreements should be made for a limited time, or that the wage rates in the agreements should be revised to effect a ten per cent reduction in rates.

No agreement being reached the case was referred to a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act, the report of which, dated November 30, 1931, with a minority report, appeared in the LABOUR GAZETTE, December, 1931, pages 1293-1300. The Board recom-

mended a decrease in wage rates effective from November 15 and the minority report, by the member nominated by representatives of the employees, recommended against any change.

The railway companies accepted the award of the Board, and made the deduction for the second half of November from the pay cheques of the employees, pending the result of negotiations for a new wage scale. The representatives of the employees contended that the Industrial Disputes Investigation Act prohibited a change in wages until the Board had reported, and an opinion from the Department of Justice was secured upholding this contention (LABOUR GAZETTE, January, 1932, page 16).

Negotiations between the railway officials and representatives of the employees finally resulted in an agreement providing for a ten per cent deduction from each employee's pay cheque from December 1, 1931, to January 31, 1933, basic rates of pay to be unchanged, the railways to notify the employees on December 1, 1932, if business conditions indicated that they would be unable to pay the full basic rates after January, so that negotiations might be carried on. The deduction from the pay for the second half of November was refunded to the employees. The text of the agreement follows:—

### AGREEMENT

The parties hereto agree to give effect, in principle, to the recommendation of the board of conciliation and investigation, in its report to the Minister of Labour, dated November 31, 1931, to the extent that

(a) Ten per cent, shall be deducted from each employee's pay cheques;

(b) Basic rates of pay, as specified in the various schedules, shall remain in effect;

(c) This agreement shall be effective from December 1, 1931, to January 31, 1933, but if, on or after December 1, 1932, business conditions have not so improved as to enable the railways to terminate the agreement at January 31, 1933, notice to that effect will be given to the representatives of the employees, upon which the parties to this agreement will confer further and agree to make every reasonable effort to bring the matter to a conclusion before January 31, 1933.

The 10 per cent wage deduction made from each employee's wages for services performed between November 16 and November 30, 1931, inclusive, shall be refunded to each employee on the payroll for the second pay period from the date of the agreement.

It is agreed that, in the event of any disputes arising in future in respect to proposed revisions of any, or all, of the agreements which shall be referred to boards of conciliation and investigation under the provisions of the Industrial Disputes Investigation Act, retroactive effect shall not, except by mutual agreement, be given to the recommendations of such boards beyond the date the disputes are finally dealt with by the boards and copies of their reports have been delivered through the registrar of boards of conciliation and investigation to the parties affected.

The Canadian Pacific Railway Company had applied for a Board to deal with a dispute as to a proposed ten per cent reduction in rates of pay for clerks, freight handlers, station employees, and similar employees in its stores department, on wharfs and in steamships service. A Board was established as mentioned in the previous article and began the inquiry on January 28, 1932.

### Settlement in United States

In the United States the railway companies having proposed reductions in wages, the Railway Labour Executives' Association, representing the officers of twenty-one railway labour organizations, met a committee of railway presidents during December to discuss the matter. The railway presidents pointed out that unless agreements were reached as to reductions it would be necessary to proceed under the provisions of the Railway Labour Act, 1926 (LABOUR GAZETTE, August, 1926, page 792), which provides for negotiations followed by mediation or arbitration, and finally for an emergency board to be appointed by the President if no settlement be reached in the case of any dispute.

On January 31, an agreement was signed providing for a ten per cent deduction from each employee's pay cheque for the twelve months from February 1, 1932, to January 31, 1933. The union representatives secured the concession of two conditions: first, that certain notices of fifteen per cent reduction should be withdrawn; second, that the railways should undertake certain measures regarding employment. The latter proposal involved measures for attempting to place motor bus and truck service on a fairer basis, and that a joint committee should be appointed to study the unions' proposals for retirement insurance, workmen's compensation and a dismissal wage, and for the establishment of regional employment bureaus.

## STRIKES AND LOCKOUTS IN CANADA DURING JANUARY, 1932

THE number of strikes and lockouts in existence in Canada during January was eleven, as compared with fourteen the preceding month. A corresponding increase appeared in the number of workers involved and in the time loss incurred. In comparison with the figures for January, 1931, a slight increase was recorded in the number of strikes and lockouts, the number of workers involved and the time loss incurred showing a similar increase.

Date	Number of disputes	Number of employees involved	Time loss in working days
*Jan., 1932...	11	1,044	10,729
Dec., 1931...	14	1,253	15,649
Jan., 1931...	9	768	7,553

\* Preliminary figures.

40648-23

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration, and disputes involving less than six employees, are included in the published record only when ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes."

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Six disputes, involving approximately 450 workers, were carried over from December, and five disputes commenced during January. Of the eleven disputes in progress during the

month, five were recorded as terminated, one being in favour of the employer involved and four resulting in compromises. At the end of January, therefore, there were six disputes recorded as strikes or lockouts, namely: lumber workers, Campbell River, B.C.; lumber workers, Nipigon District, Ont.; coal miners, Robb, Alta.; compositors, Saskatoon, Sask.; women's clothing factory workers, Toronto, Ont.; and bricklayers and carpenters, Vancouver, B.C.

The record does not include minor disputes such as are recorded in a previous paragraph, nor does it include disputes as to which information had been received indicating that employment conditions are no longer affected, but which the unions concerned have not yet declared terminated. Information is available as to six such disputes, namely: motion picture projectionists, Ottawa, Ont., Feb. 23, 1931, one employer; photo engravers, Toronto, Ont., Mar. 23, 1931, one employer; photo engravers, Toronto, Ont., May 4, 1931, one employer; motion picture projectionists, Montreal P.Q., Aug. 27, 1931, one employer; saw-mill workers, Barnet, B.C., Sept. 23, 1931, one employer; and cooks and waiters, Edmonton, Alta., Sept. 29, 1931.

A dispute reported in the press as a strike occurred on January 28, 1932, when waitresses in one restaurant in Toronto ceased work in protest against a reduction in wages, stated to be the third reduction in little more than a year, but returned to work within a few minutes when the employer agreed to reconsider the new rate. As a result a satisfactory settlement was reached. As no time was lost it is not included in the record.

A cessation of work, reported in the press as a strike, in an automobile manufacturing establishment in Oshawa, Ont., occurred on January 4, 1932. It appears that the employees objected to a new scale of piece rates as being too low, and it was agreed with the management that work would not proceed for a day in order that a satisfactory schedule might be drawn up. The dispute is, therefore, not included in the record.

Fishermen at North Sydney, N.S., ceased operations for the season on January 9, 1932, when the prices offered by the dealers were reduced by approximately one cent per pound as stocks in store were large and the demand was very light. It is stated that the fishing season was nearly over and the fishermen's union did not call a strike.

The following paragraphs give particulars regarding certain disputes in addition to the information given in the tabular statement:—

**LUMBER WORKERS (FALLERS & BUCKERS), CAMPBELL RIVER, B.C.**—This dispute, which began on December 3, 1931, to secure an increase in wages, was reported as unterminated at the end of January.

**LUMBER WORKERS, NIPIGON DISTRICT, ONT.**—At the end of January no termination to this strike had been reported. As stated in the LABOUR GAZETTE for December this was the second stoppage that month. The employer, in order to deliver wood contracted for, agreed to an increase in wages demanded at the time of the first stoppage on December 4, raising the rate from \$2.50 per cord to \$3 and from \$26 per month to \$35. While a new scale of wages was demanded at the time of the second stoppage, it appears from later reports that the chief cause was the objection on the part of the strikers to the employment of certain workers, some of whom had not joined in the first strike, and of others who had been engaged during the dispute or after, and who apparently refused to join the union, the Lumber and Agricultural Workers Industrial Union of Canada. Some of these were driven from the camp and their alleged assailants were arrested, but were acquitted for lack of evidence. The employer reported that he expected to close the camp.

**COAL MINERS, ROBB, ALTA.**—At the end of January this dispute, which began on December 14, was reported to be unterminated, but the employer had replaced the strikers sufficiently to operate the mine. The union involved, the Mine Workers' Union of Canada, was collecting funds to maintain the strikers and to defend some twelve or fourteen women arrested in connection with picketing.

**WOMEN'S CLOTHING FACTORY WORKERS, TORONTO, ONT.**—This dispute, an alleged lock-out, began on November 19, 1931, when two employers instituted changes in methods of work which involved the discharge of certain workers, claimed to be in violation of their agreement. It was terminated in one factory on January 18 and in the other on January 23, by the return of a substantial number of the workers involved. Wages and working conditions are reported to be the same as before the dispute, but not under a union agreement. It is not reported that the union has called off the dispute or was a party to any settlement. The agreement in force prior to the dispute terminated on January 1, 1932.

**COMPOSITORS (NEWS & JOB), SASKATOON, SASK.**—At the end of January, twenty-one out of the forty-four workers involved in this dispute, which began on December 14, 1931, were

reported to be still involved. The employees had refused a reduction in wages on the termination of the agreement and had been partly replaced. During the month a number of the compositors returned to work with the permission of the union under open shop conditions, but the union declared the dispute to be unternminated.

**MOTION PICTURE PROJECTIONISTS, EDMONTON, ALTA.**—The four projectionists involved in this dispute, which began on November 14, 1931, resumed work on January 4, 1932, under working conditions and hours the same as before

the dispute, but at lower wages. The employer, it is reported, had previously proposed a reduction in wages, and in December, wages being in arrears and the employer in financial difficulties, the union offered to accept a reduction from \$65 per week to \$50, but was informed that two other men had already been engaged to take the places of the four affected, and this arrangement could not be altered. Later the trustees for the creditors discharged three musicians and stage hands as not required. The four projectionists were finally re-engaged as stated above.

### STRIKES AND LOCKOUTS IN CANADA DURING JANUARY, 1932

Industry, occupation and locality	Number of workers involved	Time loss in working days	Remarks
--------------------------------------	-------------------------------------	------------------------------------	---------

#### (a) Strikes and Lockouts in Progress Prior to January

<b>LOGGING—</b>			
Lumber workers, Campbell River, B.C.	36	900	Commenced Dec. 3, 1931; for increase in wages; unternminated.
Lumber workers, Nipigon District, Ont.	100	1,500	Commenced Dec. 28, 1931; for dismissal of certain workers and for increase in wages; unternminated.
<b>MINING, NON-FERROUS SMELTING AND QUARRYING—</b>			
Coal miners, Robb, Alta.....	75	1,800	Commenced Dec. 12, 1931; against discharge of worker and charging for lamps, alleged to be in violation of agreement; unternminated.
<b>MANUFACTURING—</b>			
<i>Textiles, Clothing, etc.—</i>			
Women's clothing factory workers, Toronto, Ont.	200	3,500	Alleged lockout; commenced Nov. 19, 1931; re union wages and working conditions; terminated Jan. 23, 1932; in favour of employer.
<i>Printing and Publishing—</i>			
Compositors (news and job), Saskatoon, Sask.	44	800	Alleged lockout; commenced Dec. 14, 1931; against decrease in wages; unternminated.
<b>SERVICE—</b>			
<i>Recreational—</i>			
Motion picture projectionists, Edmonton, Alta.	4	4	Alleged lockout; commenced Nov. 14, 1931; wages in arrears and workers replaced at reduced rates; terminated Jan. 4, 1932; compromise.

#### (b) Strikes and Lockouts Commencing during January, 1932

<b>MINING, NON-FERROUS SMELTING AND QUARRYING—</b>			
Coal miners, Midlandvale, Alta.	180	540	Commenced Jan. 21, 1932; against change in working conditions; terminated Jan. 23, 1932; compromise.
Coal miners, Coleman, Alta...	275	275	Commenced Jan. 27, 1932; for change in working conditions; terminated Jan. 28, 1932; compromise.
<b>MANUFACTURING—</b>			
<i>Textiles, Clothing, etc.—</i>			
Women's clothing factory workers (dressmakers), Montreal, P.Q.	20	160	Commenced Jan. 21, 1932; against reduction in staff; terminated Jan. 30, 1932; compromise.
Women's clothing factory workers, Toronto, Ont.	10	50	Commenced Jan. 25, 1932; against reduction in piece rates; unternminated.
<b>CONSTRUCTION—</b>			
<i>Buildings and Structures—</i>			
Bricklayers and carpenters, Vancouver, B.C.	100	1,200	Commenced Jan. 18, 1932; against reduction in wages; unternminated.

**COAL MINERS, MIDLANDVALE, ALTA.**—A cessation of work occurred on January 21, 1932, for three days, the miners objecting to an order that each car of coal loaded should be tagged by the miner. The tippie had burned down some time before and the temporary tippie had no provision for screens and scales. It had been arranged between the management and the union, the United Mine Workers of America, that the miners would work at day rates instead of by the ton, as under the agreement, while the temporary tippie was in use. The order to tag the cars was resented as a check up on the quantity and quality of the coal each miner produced at datal wages. The district president of the union, however, reached an agreement with the management that the cars should be tagged, but it is understood that an arrangement was made as to the number of cars per man expected and as to the quality of the coal.

**COAL MINERS, COLEMAN, ALTA.**—Employees in one colliery ceased work for one day to secure an equal division of the available work among the men, there not being orders for coal to employ all steadily. The management negotiated an arrangement more satisfactory to the men and work was resumed next day.

**WOMEN'S CLOTHING FACTORY WORKERS (DRESSMAKERS), MONTREAL, P.Q.**—Pressers, fourteen in number, in a waist manufacturing factory ceased work when, as a result of a change to a contract system, six pressers were laid off. The establishment was picketed by the union to which the strikers belonged, the Industrial Union of Needle Trades Workers. As a result of negotiations between the parties, with the assistance of a conciliation officer of the Department of Labour, it was arranged that the fourteen employees who ceased work should be reinstated and that the other six should be employed when staff was increased. Work was resumed on January 30.

**WOMEN'S CLOTHING FACTORY WORKERS, TORONTO, ONT.**—Employees, ten in number, ceased work as a result of a reduction in wages on January 25, 1932. The employer reports that the strikers were replaced, but that six of them returned to work. At the end of the month the establishment was being picketed.

**BRICKLAYERS AND CARPENTERS, VANCOUVER, B.C.**—As a result of a notice of reduction in wages, effective in three days, carpenters and bricklayers on one building ceased work as from January 18, 1932. The two carpenters' unions having members on the job, the United Brotherhood of Carpenters and Joiners and the amalgamated Carpenters of Canada,

claimed that they had agreements with the contractors' association, to which the contractor involved belonged, which provided that notice of any change in conditions should be given prior to April first in any year, by sixty days and ninety days respectively. The contractors' association had contended that these agreements had been broken in the spring of 1931 as the unions allowed their members to work for other contractors at less than union rates and had given notice of a reduction in wages. This led to a strike from July 2 to July 9, 1931, work being resumed when the contractors agreed to pay the agreement rate of \$1 per hour pending further negotiations. The contractors' association then gave sixty and ninety days' notice of a reduction to 84 cents per hour, but the unions refused to accept these notices as being effective prior to April 1, 1932, under the terms of the agreements. The bricklayers' union claimed to have a verbal agreement with the contractors which provided for \$1.35 per hour from June 1, 1929, subject to ninety days' notice. The contractors' association held that this arrangement had expired. Negotiations between the parties were brought about by the representative of the Department of Labour, but at the end of the month no settlement had been reached. Small numbers of carpenters and bricklayers on other buildings were similarly involved and a number of labourers were indirectly affected. Early in February work was resumed, the carpenters' rate to be unchanged at \$1 per hour until March 31, while the bricklayers' rate was reduced from \$1.35 per hour to \$1.22½.

### Unemployment Policy of Labour Movement in France

At the 21st national congress of the Confederation of Labour, held at Paris last September, resolutions were adopted in favour of a 40-hour five-day working week, paid vacations, the development of funds with a view to the establishment of unemployment insurance, the extension of the school period, and the lowering of the age limit for pensions. The Congress considered that these measures would insure the re-employment of large numbers now unemployed; would help to restore the purchasing power of the workers; and would tend to re-establish equilibrium between the supply and demand for labour, and so counteract the existing tendency towards wage reductions. Other resolutions recommended improvements in the facilities for labour distribution, and the advance planning of public works.

## RECENT STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the *LABOUR GAZETTE* from month to month. The annual review containing a table summarizing the principal statistics as to strikes and lockouts in other countries is on page 149 of this issue. Information as to particular disputes is obtained for the most part from newspaper reports.

### Great Britain

Provisional figures for the year 1931 show the number of disputes beginning in the year as 419. The number of workers involved in all disputes in progress during the year was 491,800 and the time loss for the year 6,985,000 working days. The two largest disputes of the year, one in the cotton manufacturing industry and one in the coal mining industry (see page 149 of this issue) accounted for nearly two-thirds of the number of workers involved and over three-quarters of the total time loss for the year.

Of these 419 disputes beginning in 1931, 32 were over demands for increases in wages, 116 over proposed reductions in wages, 85 over other wages questions, 33 over working hours, 85 over the employment of particular classes or persons, 18 over trade union questions and 49 over other questions.

### INDUSTRIAL DISPUTES IN GREAT BRITAIN AND NORTHERN IRELAND DURING 1931

Industry group	1931		
	Number of Disputes beginning in 1931	Number of work-people involved in all disputes in progress	Aggregate duration in working days of all disputes in progress
Coal mining.....	146	280,900	2,849,000
Other mining and quarrying..	8	600	14,000
Brick, pottery, glass, etc.....	13	1,000	19,000
Chemical.....	6	1,000	2,000
Iron and steel.....	6	500	2,000
Engineering.....	8	700	11,000
Shipbuilding.....	14	2,400	56,000
Other metal.....	34	5,300	52,000
Cotton.....	17	147,400	3,319,000
Wool textile.....	2	3,000	21,000
Other textile.....	19	13,400	377,000
Clothing.....	21	1,300	16,000
Food, drink and tobacco.....	4	5,100	11,000
Woodworking, furniture, etc....	16	5,900	83,000
Paper, printing, etc.....	4	400	1,000
Building, public works contracting, etc.....	57	12,300	145,000
Transport.....	17	5,300	13,000
Commerce, distribution and finance.....	9	700	2,000
Other.....	18	1,600	12,000
Total.....	419	491,800	6,985,000

In addition there was one sympathetic strike. The accompanying table gives a classification of the disputes by industries for 1931.

The number of disputes beginning in December was 16 and 10 were still in progress from the previous month, making a total of 26 disputes in progress during the month, involving 6,100 workers with a time loss of 52,000 working days. Of the 16 disputes beginning in the month, 10 were over wages questions, 4 on questions of working hours, 2 on other questions of working arrangements. Settlements were reached in 16 disputes of which 5 were in favour of workers, 5 in favour of employers and 6 ended in compromises.

A strike of 3,700 watermen and lightermen engaged in unloading boats in the Thames river began January 4 and caused, it is reported, half of the trade of the Port of London to be held up. A strike of dockers at Birkenhead also began about the same time. These disputes were over the refusal of the strikers to accept the terms of the new national agreement providing for certain reductions in wages. No report has been received of settlements.

### Newfoundland

A strike of longshoremen at St. John's began January 23, against a proposed reduction in wages of 10 per cent. The number involved was approximately 2,400, but no interference was caused with the handling of mail and perishable cargo. It was reported that on January 29, the union agreed to resume work on the former wage scale pending settlement.

### United States

The number of disputes beginning in November was 42 and 46 were still in effect at the end of the month. The number of workers involved in disputes in effect at the end of the month was 16,295 and the time loss for the month 393,884 working days.

The City Council of Edmonton, Alberta, recently re-enacted a bylaw providing that every retail establishment shall close at 1 o'clock on Wednesday afternoon in each week. Restaurants for the sale of food consumed on the premises, and drug stores for the filling of doctor's prescriptions only, are exempted from the order. The bylaw took effect on February 3, and will remain in force throughout the present year with the exception of the month of December.

## STRIKES AND LOCKOUTS IN CANADA AND IN OTHER COUNTRIES DURING 1931

THE number of strikes and lockouts in Canada during 1931 was 88, a figure somewhat greater than that for 1930 but approximately the same as the average number each year since 1922, which marked the end of a period of industrial conflict under war and post-war conditions. The number of workers involved, however, being 10,738, was appreciably lower in 1931 than during 1930 or during any year since 1914, which was the lowest since the record was begun in 1901. The year was marked by the number of disputes involving small numbers of employees, usually for short periods of time. On the other hand, owing to the occurrence of five disputes involving relatively large numbers of employees

for some length of time, the time loss in "man-working days" was considerably greater than during 1930, but approximately equal to the average number of days lost during the previous five years, and less than during most of the years since 1901.

The largest dispute during the year was that involving 1,500 workers in women's clothing factories at Toronto, Ont., from February 25 to May 7 and resulting in a time loss of 47,000 working days. Other important disputes occurring during the year included that of 650 sawmill workers at Fraser Mills, B.C., lasting over two months in the autumn, and resulting in a time loss of 35,000 working days; that involving 122 photo-engravers at Tor-

TABLE 1.—STRIKES AND LOCKOUTS IN CANADA BY YEARS, 1901-1931

Year	All Industries					Coal Mining			Industries other than Coal Mining		
	Number of disputes		Number of employers	Number of workers involved	Time loss in working days	Number of disputes in existence during year	Number of workers involved	Time loss in working days	Number of disputes in existence during year	Number of workers involved	Time loss in working days

\* In these totals figures for disputes extending over the end of a year are counted more than once.

onto and London, Ont., Quebec and Montreal, P.Q., and Winnipeg, Man., from May 4 until the end of the year, resulting in a time loss of 20,000 working days; that of 360 sawmill workers at Barnet, B.C., from September 23 until the end of the year, resulting in a time loss of 14,500 working days; and that of 206 masters and mates at Vancouver and Victoria, B.C., from April 21 to July 11, resulting in a time loss of 14,000 working days.

The record includes seven strikes involving men engaged by municipal and provincial authorities on unemployment relief work, which are therefore not industrial disputes in the sense of interruptions to industry. These disputes involved 837 workers and a time loss of 4,562 working days. In addition there were reported to the Department a number of cases of cessation of work by men on unemployment relief work who were not receiving wages but performing some work and receiving direct relief which was not affected by the cessation of work. There being no relation of employer and employee involved, such disputes were not included in the record.

### Compilation of Statistics

Since its establishment toward the end of 1900 the Department of Labour has maintained a record of strikes and lockouts in Canada, publishing in the LABOUR GAZETTE each month a complete list of those in progress, so far as available, with particulars as to the nature and result of each dispute. Early in each year a review of the previous year has been given, including statistical tables analysing the data, and since 1912 including a complete list of the disputes on record during the year. As the monthly statements in the LABOUR GAZETTE are necessarily of a preliminary nature the annual review constitutes the revised record for the year. A special report on "Strikes and Lockouts in Canada 1901 to 1912," issued in 1913, contained a complete list of strikes and lockouts for that period with analytical tables. The annual reviews in the LABOUR GAZETTE have brought the lists of disputes and analytical tables down to date each year.

The annual review for 1930 appearing in the LABOUR GAZETTE, February, 1931, included summary tables back to 1901, the result of a revision of the record on the basis of the classification of industries adopted by the Dominion Bureau of Statistics and other government departments for official statistics. This classification had been used for strikes and lockouts since 1921, and it was advisable to have the record for earlier years on the same basis. Other revisions to secure uni-

formity throughout the whole period were also made.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical tables, therefore, strikes and lockouts are recorded together, the term dispute being used with reference to either.

A strike or lockout included as such in the records of the Department, is a cessation of work involving six or more employees and lasting one working day or more. Disputes of less than one day's duration and disputes involving less than six employees have not been included in the published record unless a time loss of 10 days or more is caused. A separate record of such disputes involving less than 10 days' time loss is maintained in the Department. Although not included in the statistical record, such disputes are mentioned in the LABOUR GAZETTE at the time of their occurrence. During 1931 there were three such disputes, involving 26 employees, making a time loss of 10 working days.

The figures in this report are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. As to duration of strikes, numbers of employees concerned, etc., it is impossible always to secure exact information, but the estimate made in such cases is the result of painstaking methods in the collection of data, and, with increasing experience in dealing with the subject it is believed that the statistics indicate the conditions with reasonable precision. The estimate of time loss is reached by multiplying the number of working days during which each strike lasted by the number of employees involved in the dispute from time to time so far as known. The number of employees recorded for each dispute is the number of those directly affected, that is on strike or locked out, and does not include those indirectly affected. In recent years, when the information is available, the number indirectly involved has been shown in footnotes.

The record does not include minor disputes as described in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected, although the unions or organizations concerned have not yet declared them terminated. Information is available as to the following disputes of this nature carried over from 1930: electrotypers, Toronto, Ont., commencing December 20, 1926, lapsed by July, 1931; photo-engravers, Toronto, Ont., January 7, 1929, merged with

# RESULTS OF STRIKES AND LOCKOUTS ACCORDING TO NUMBERS OF EMPLOYEES INVOLVED EACH YEAR 1901-1931

NUMBER OF  
EMPLOYEES

LOSS IN WORKING DAYS THROUGH STRIKES AND LOCKOUTS BY GROUPS  
OF INDUSTRIES EACH YEAR 1901-1931

dispute commencing May 4, 1931; motion picture projectionists, Vancouver, B.C., June 23, 1930, lapsed during February, 1931; and bakery drivers, Saskatoon, Sask., September 22, 1930, lapsed during April, 1931. Also during 1931, the following disputes included in Table 10 and recorded as terminated were added to this list: upholsterers, Toronto, Ont., commencing December 10, 1930, called off on March 7, 1931; pile drivers and hoisting engineers, Vancouver, B.C., January 3, 1931; lapsed during June; coal miners, Shaughnessy, Alta., January 15, 1931, lapsed during November; shirt and overall factory workers, Winnipeg, Man., April 6, 1931, called off by the union in June; tailors, Vancouver, B.C., June 6, 1931, called off by the union in October; cloakmakers, Winnipeg, Man., October 27, 1931, terminated during December; motion picture projectionists, Ottawa, February 23, 1931; photo-engravers, Toronto, Ont., March 23, 1931; photo-engravers, Montreal and Quebec, P.Q., Toronto and London, Ont., and Winnipeg, Man., May 4, 1931; motion picture projectionists, Montreal, P.Q., August 27, 1931; sawmill workers, Barnet, B.C., September 23, 1931; and cooks and waiters, Edmonton, Alta., September 29, 1931.

### Charts

The accompanying chart of the time loss in working days by groups of industries for each year back to 1901, shows that in mining considerable time loss occurred in 1909, 1910, 1911 and 1913, and again in 1917, 1922, 1924 and 1925. In 1919 the time loss due to general strikes is shown separately.

In metal manufacturing considerable time loss appeared in 1919 and 1920. In construction considerable time loss appeared only in 1912 and 1919. In transportation there was considerable time loss only in 1901, due to a strike of trackmen; in 1903 due to a strike of railway clerks and freight handlers throughout western Canada, and a strike of longshoremen at Montreal, with a sympathetic strike of teamsters; and in 1908, due to a strike of railway shop machinists. There also occurred considerable time loss in clothing, textiles, boots, furs, etc., in 1903, 1908, 1912, 1914, 1917, 1925, 1926 and 1930. The time loss in other manufacturing industries was large in 1901, due to a lockout of cigarmakers at Montreal; and in 1921, 1922, 1923 and 1924, due to the prolonged disputes of job printers to secure the forty-four hour week.

From the chart showing results of the disputes it appears that the majority of employees were successful or partially successful in 1901, 1902, 1907, 1915, 1916, 1917, 1918, 1926, 1930 and 1931 but were unsuccessful in 1908, 1921 and 1923.

### Features of Strikes in 1931

The following notes deal with the chief features in strikes and lockouts during the year 1931:

**LOGGING.**—The three disputes in this industry commenced in December and two of them were underminated at the end of the year, one at Campbell River, B.C., the other being the second of two in the Nipigon district, Ont. The first strike in the Nipigon district and the one at Campbell River were for increases in wages.

**FISHING & TRAPPING.**—There were three disputes in fishing, all to secure an increase in the price paid for fish or for restoration of the previous season's rates. Two of these disputes were in British Columbia one being at Prince Rupert and the other at Barkley Sound. The third was at North Sydney, N.S. There were 1,000 fishermen involved in these disputes and the resulting time loss was 11,400 working days. All were settled by arbitration or conciliation, compromises being effected.

**MINING.**—All of the nine disputes in mining involved coal miners, five of which occurred in Alberta, two at Estevan, Sask., and two in Nova Scotia. The most important of these, a strike of six hundred miners at Estevan, Sask., to secure union recognition, higher wages and improved working conditions was referred to a Royal Commission. A special article in the *LABOUR GAZETTE*, October, 1931, pages 1065-1067 gave an account of the strike. The other disputes were of short duration and involved relatively few workers with the exception of one at North Sydney, N.S., where 950 miners struck against excessive dockage for rock in coal and for the dismissal of the official responsible. They returned to work after a week without securing their demands. The colliery was operating only two days a week, so that the time loss was small.

**MANUFACTURING.**—There were four important disputes in this industry that accounted for most of the time loss incurred. A strike of some 1,500 dressmakers employed in seventy establishments in Toronto, Ont., on February 25 continued until May. From time to time the individual employers signed union agreements and the strikers went back to work. In April the Minister of Labour for Ontario met representatives of the employers and of the employees, to consider the signing of a collective agreement. The employers, however, finally stated that some of them had decided not to recognize the union and that further negotiations would, therefore, be useless. An additional number of employers, however, signed individual agreements with

the union later from time to time and toward the end of the month the union stated that only a small number of factories were non-union. It appeared that these included some of the largest shops which had succeeded in replacing the strikers to a large extent. On May 5 the strike was terminated, the union reporting that agreements had been signed with establishments employing 950 of the strikers. During the strike there were a number of arrests for offences in connection with picketing and some convictions. There was also considerable time loss in the printing and publishing industry due to an extended dispute involving photo-engravers over the renewal of the union agreement with one firm in Montreal and Quebec, P.Q., Toronto and London, Ont., and Winnipeg, Man. This dispute arose over an alleged lockout in 1929 in a plant taken over later by this firm. The workers were replaced in 1929 and again in 1931 but the union continued to carry on the dispute. Two disputes of sawmill workers at Fraser Mills and Barnet, B.C., commenced during September for an increase in wages and union recognition, and against a decrease in wages respectively, involving about 650 and 360 workers. Both were settled in November, the former by conciliation resulting in a compromise settlement and the latter by the closing down of the plant. Most of the disputes in manufacturing were small, involving clothing factory workers.

**CONSTRUCTION.**—There were but thirteen disputes in construction during the year, and none involved large numbers of workers or resulted in great time loss.

**TRANSPORTATION.**—A strike of masters and mates employed on tow boats at Vancouver and Victoria, B.C., against a proposed ten per cent decrease in wages occurred in April and was not called off until July 11. Most of the strikers had been replaced, the remainder returning to work at the lower wage rates. The resulting time loss amounted to 14,000 working days. Seventy-five marine engineers also ceased work in sympathy with the masters and mates at Vancouver, refusing to work with those replacing them. A strike of 170 linemen in the electric light, heat and power system at Montreal over the refusal of the employer to renew the union agreement resulted in serious trouble. Some of the linemen did not strike. The company secured some fifty workers to replace the strikers and shortly after the beginning of the dispute thirty-five linemen returned to work. The Montreal representative of the Department of Labour was able later in the month to bring about a meeting between the repre-

sentatives of the parties to the dispute which resulted in the company agreeing to re-engage the strikers on application without prejudice as required. From time to time during the strike and after its termination damage was done to the transmission lines and equipment of the company amounting to about half a million dollars, while parts of the city were deprived of light and power and a serious condition existed. A number of strikers were arrested, convicted of being involved in the damage and sentenced to various terms of imprisonment. The above three mentioned disputes comprise the total number recorded under transportation and public utilities.

**SERVICE.**—One-half of the fourteen disputes classified in this division involved men employed as wood cutters or labourers on unemployment relief work carried on by provincial or municipal authorities, and these accounted for nearly all of the workers involved and time loss recorded. Most of the other disputes in this group involved motion picture projectionists and were over questions as to the continuance of union conditions, involving small numbers of workers in each case.

### Analysis of Statistics, 1931

Table I is a summary of the principal statistics for the period for which the record has been compiled, beginning in 1901. The table shows the number of disputes beginning in each year and the number in existence during the year, the difference in each case being the number of disputes carried over the end of the previous calendar year. A small number of disputes have been carried over at the end of every year except 1903 and 1929. The approximate number of employers involved in all industries, as well as the number of workers involved and the time loss, is given. In addition to these data, the number of disputes in existence during each year in coal mining and in industries other than coal mining is given, along with the number of workers involved and the time loss. A study of the latter figures reveals that a few disputes in coal mining in most years account for a large proportion of the workers involved and for a still larger proportion of the time loss resulting.

Table II gives an analysis by number of workers involved during 1931 and shows that one dispute involved 1,500 workers, or 14 per cent, and resulted in 23 per cent of the time loss; that five disputes involved 39.1 per cent of the workers and resulted in 45.2 per cent of the time loss; or on the other hand that 47 disputes, more than half the total, involved but 10.5 per cent of the workers and resulted in only 7.3 per cent of the time loss.

Table III gives an analysis by time loss in man working days, and shows that five disputes involving 26.4 per cent of the workers resulted in 63.9 per cent of the time loss; that 31.8 per cent of the disputes involving 71.3 per cent of the workers resulted in 91.8 per cent of the time loss; and 54.5 per cent of the disputes involved but 20.9 per cent of the workers and resulted in only 4.2 per cent of the time loss.

Table IV gives an analysis by duration, that is the number of working days each dispute was in progress, and shows that 21 disputes lasted twenty-five days and over and accounted for 76.3 per cent of the time loss incurred during the year; that 7 disputes were un-terminated or carried over from 1930; also that 25 disputes lasted less than five working days and that 43 disputes lasted less than ten working days and resulted in but 8.5 per cent of the time loss.

Table V gives an analysis by provinces, and shows that Ontario had the largest number of disputes during the year, British Columbia being next, followed by Quebec and Alberta. British Columbia, however, had the largest number of workers involved, namely one-third of the total, and also the greatest time loss, amounting to over two-fifths of the total, owing to the strikes on tow boats and in saw-mills; Ontario had the next largest number of workers involved and resultant time loss. Of the 20,000 working days time loss due to an interprovincial strike, 11,000 working days occurred in the province of Quebec and 7,400 working days in Ontario.

Table VI gives an analysis by industries and shows that 48.8 per cent of the disputes were in manufacturing, 10.2 per cent in mining, 14.8 per cent in construction, and 16.0 per cent in service. One-half of the last group involved unemployment relief workers. In manufacturing 23 disputes were in textiles, clothing, etc., and 8 in "other wood products." These accounted for 33.5 per cent and 25.3 per cent of the time loss respectively. Three disputes in fishing accounted for 5.6 per cent of the time loss.

Table VII gives an analysis by causes and results and shows that 28 disputes were against a decrease in wages, 12 were for an increase in wages and 19 were to secure or to maintain union wages and working conditions. There

were five sympathetic disputes during the year and six disputes over discharge of workers for causes other than in connection with union activity. In regard to the results of the disputes, 25 were in favour of workers, twenty-eight in favour of employers, twenty-four ended in compromises or were partially successful, while eleven were recorded as indefinite or un-terminated. Over half of the workers or 5,175 were involved in the disputes that ended in compromises or were partially successful, 2,604 workers were involved in disputes terminating in favour of employers, and 1,769 workers were involved in disputes in which they were successful.

Table VIII gives an analysis by industries and methods of settlement with respect to the number of disputes and the workers involved, and shows that thirty-eight disputes involving 4,157 workers were settled by direct negotiations, eighteen disputes involving 2,454 workers were terminated by their return without negotiations or settlement and twelve disputes involving 716 workers were terminated by replacement workers. Nine disputes involving 1,566 workers were settled by conciliation, either of the Department of Labour or some other party.

Table IX gives an analysis of months for the past eleven years, giving the number of disputes starting during each month, as well as the number of disputes in existence, and the number of workers involved each month, both in new disputes and in all disputes in progress, with the total time loss by months. This table shows that the greatest number of disputes during a year generally occurs in May and that the greatest time loss generally occurs in July. The past two years were exceptions, however, in that the greatest number of disputes commenced in September and the largest time loss occurred in February in 1930 and in October in 1931, closely followed by March, September and November. This large time loss in September, October and November was mainly due to strikes of sawmill workers at Fraser Mills and Barnet, B.C., where 1,010 workers were on strike during all of October and part of September and November.

Table X gives a list of strikes and lockouts occurring during the year, with certain details as to causes, results, etc.

TABLE II.—STRIKES AND LOCKOUTS IN CANADA, 1931, BY NUMBER OF EMPLOYEES INVOLVED

Number of workers involved	Disputes		Number involved		Time Loss

(a) Called off, Aug. 31.

(b) Colliery operating only two days per week.

(c) Thirty workers employed by one firm returned to work on Feb. 9.

(d) Called off near the end of June.

(e) Arbitration Board find strike in violation of agreement and strikers liable to penalty under agreement.

(f) Union had not called off dispute at end of year, but workers replaced previously; picketing, strike pay, etc., still in effect in some cases.

(g) Called off, Mar. 7, 1931.

(h) Reference to Board under Alberta Labour Disputes Act; recommendation of 80c. not accepted by employers.

(i) Lapsed.

(k) Considered as first working day of the year.

(l) Employed on unemployment relief work.

(m) Wages were in arrears and new employees were under non-union working conditions.

## Strikes and Lockouts in Other Countries during 1931

The accompanying table gives the principal figures as to strikes and lockouts in other countries since 1919, as compared with Canada, showing the number of disputes (strikes and lockouts), the number of employees involved in stoppages of work and the time loss in man working days in those countries for which such figures are available.

In some of these countries, figures as to strikes and lockouts are published separately, but in the table here given they have been included together. The practice varies greatly in the various countries also in regard to other points. In some cases the number of strikes and lockouts shown for a year is the number beginning during the year, in other cases it is the number ending during the year, and in still other cases it is the number in existence during the year, including those carried over from the previous year with those beginning during the year.

The figures as to the number of employees involved published by some countries show not only the number of employees directly involved, but also the number of those indirectly involved, that is thrown out of work by disputes to which they are not parties; but exact information as to these points is not always given. In the table given herewith the column showing numbers of employees involved includes figures for the numbers directly involved, or the total number directly and indirectly involved according to the method adopted by the country in question.

For some countries, figures as to time loss, that is, the number of "man-working-days" lost, are not given.

Footnotes to the table indicate the nature of the statistics with reference to the above points. Many countries publish these statistics only once each year or less frequently, the figures being issued in some cases after an interval of some length.

The following notes give information as to the more important disputes in each country in the year 1931.

### Great Britain

Certain cotton manufacturing firms at Burnley in Lancashire had begun in April, 1929, as an experiment, to use in a small percentage of their looms a system by which each weaver tended eight instead of four looms. During 1930 the employers' associations wished to extend the system but negotiations with the union were unsuccessful. The employers then drew up a new piece work scale for the use of the more-ooms-per-weaver

system which they proposed to put into effect in the weaving mills on January 5, 1931. No agreement was reached with the union, and on January 5, a strike of weavers began in certain of the mills at Burnley as a protest against the new system. When they refused to return to work, a lockout at other weaving mills at Burnley began on January 12. Further negotiations and conciliation efforts by the Ministry of Labour were unsuccessful, and the Cotton Spinners and Manufacturers' Association on January 19, extended the lockout to other places in Lancashire, Cheshire, Yorkshire and Derbyshire, involving, it is estimated, about 120,000 workers. The Prime Minister and other members of the Cabinet endeavoured to bring about a settlement, but the textile trades' federation continued in their refusal to accept the new system. On February 13, the manufacturers' association decided to withdraw the lockout and to discontinue the more-ooms-per-weaver experiment at Burnley, and work was resumed February 16.

On January 1, 1931, practically all of the coal miners in Monmouthshire and South Wales, numbering 150,000 ceased work. The dispute was over the arrangement of hours and certain other questions. Under the agreement which came into effect in December, 1926, after the general strike and which expired November 30, 1930, the hours for underground workers were 47 per week for morning shift and 40 hours for the afternoon and night shifts. Under the Coal Mines Act, 1930, hours for underground workers were restricted to 45 per week, but the parties to this dispute could not agree on the arrangement of hours of work and on certain other points. Through conciliation by the President of the Board of Trade and the Secretary of Mines, meetings were arranged and a temporary agreement reached by which work was resumed January 19. In February a general agreement for the coal field was signed for a period of three years, by which hours for underground workers were to be 7½ per day, 6 days per week, and a Joint Conciliation Board with a new independent chairman was to be formed and was to consider the district percentage addition to basis rates of wages and the subsistence allowance (which is paid where necessary to bring the earnings per shift of individuals to a certain amount and which varies according to family responsibility). Provision was also made for settlement of disputes, but in most other respects the terms were the same as in the previous agreement. An award of the Independent Chairman of

the Joint Conciliation Board provided for a reduction in the district percentage addition to basis rates amounting to  $6\frac{1}{4}$  per cent of current wages rates from March 1. Dissatisfaction with this award resulted in stoppages of work in various districts of South Wales between March 7 and March 20, involving in all about 14,000 workers, but by March 20, work had been resumed under the terms of the award.

Over 9,000 coal miners in the Cumberland district were involved in a dispute which lasted from June 24 to the middle of August. In this case the miners objected to a reduction of  $5\frac{1}{2}$  per cent in the current wage rates which was recommended by the Coal Mines National Industrial Board, but work was resumed under the terms of the award although certain concessions were granted by employers.

In Fifeshire and other districts in Scotland a temporary arrangement of working hours was in effect pending an agreement as to wage rates payable for the  $7\frac{1}{2}$  hour day, but between July 9 and August 1, 11,000 coal miners ceased work, in some districts for only one or two days, in other districts they remained out until the general agreement was reached. This general agreement provided for wage decreases amounting to  $4\frac{1}{2}$  per cent on current rates. In some collieries in various districts in Scotland surface workers and others were dissatisfied with the wage rates to be paid under this agreement and there were a number of strikes between August 7 and August 27. In all, 30,000 workers were involved, but the average stoppage was for only three days. By August 27, work had been resumed under the terms of the general agreement.

### France

The largest dispute of the year occurred in the textile industry of the Roubaix-Tourcoing district and began May 18, involving 120,000 workers. Employers had at first proposed a general wage reduction of ten per cent, but later offered to postpone this if the workers would agree to the abolition of certain bonuses which were granted after the strike in 1930 to meet the workers' contributions to the Social Insurance Fund and which amounted to about four per cent of wages. The workers refused to accept this condition and went on strike May 18. On July 6, certain employers not belonging to the employers' association reached an agreement with their employees, about 30,000 in number, to withdraw the 4 per cent bonus but to pay a bonus of 3 per cent until September 15, after which it would be reduced to one per cent and merged in wages. Work was then resumed in these

establishments. On July 29 the whole dispute terminated when workers in establishments of the employers' association also resumed work and agreed to the complete withdrawal of the 4 per cent bonus.

### Germany

Following a reduction in coal prices, employers in the Ruhr coal mining industry proposed a reduction of 12 per cent in wages at the beginning of 1931. During the course of government conciliation proceedings, employers later offered to make the decrease only 8 per cent, while the workers would accept only a reduction of 4 per cent. No agreement could be reached so the employers gave notice to terminate contracts at January 15. The number of workers affected was approximately 300,000. Of this number about 12 per cent or between 35,000 and 40,000 went on strike in various collieries in the first week of January, but returned to work within a few days. Under his emergency powers, a special order was issued by the Federal President, to be in effect for a limited period, providing that where national interests are urgently involved and the ordinary means of conciliation have failed, a special conciliator appointed by the Federal Minister of Labour would, with two neutral assessors, make an award. Under this order an award was issued in this dispute about January 10, providing for a wage reduction of 6 per cent. This was rejected by both parties, but it was declared binding.

In the iron and steel industry in Bavaria, a conciliation award providing for a wage reduction of about  $5\frac{1}{2}$  per cent was rejected by employers who insisted that the reduction should be 15 per cent and declared a lockout from March 10. About 40,000 workers were affected. This lockout was terminated March 18 when a revised award was issued and declared binding; the reduction in wages provided was still to be  $5\frac{1}{2}$  per cent.

### Norway

A lockout of 12,500 workers in the paper manufacturing industry began March 14, after a failure of the parties to reach a new agreement involving wage reductions. On April 8, lockouts began for the same reason in the iron, textile, building, sawmill, lithographic, bookbinding and book printing, fur and leather industries affecting an additional 43,500 workers, and later on April 15, another large number of workers became involved, making a total of 82,000 locked out. This dispute lasted all summer, but through the efforts of the Public Conciliator, work was generally re-

*(Continued on page 154)*

sumed September 14. The agreements reached provided for reductions in wages of from about 5 to 10 per cent, which was approximately half the rate of reduction as first proposed by employers.

#### Sweden

After the expiration of the national agreement in the textile industry at the end of 1930, a partial strike began when the parties

(h) Preliminary figures. (k) Excluding agricultural strikes. (l) In disputes for which reported. (m) Statistics are more complete from June, 1927. (n) Exclusive of general strike of April, 1920. (o) Strikes only. (p) Since 1923, strikes have been illegal and none have been reported.

could not come to a new agreement. The employers then announced a general reduction in wages of 10 per cent and the strike was extended to involve 33,000 workers. A settlement was reached March 20 through a conciliation commission. It was reported that the reduction in wages was agreed to, but certain increases in overtime rates were conceded by the employers and an agreement made for the remainder of the year.

### United States

A strike occurred in woollen mills at Lawrence, Massachusetts, in February, resulting in a shut down of certain mills. About 10,000 workers were either directly or indirectly affected. The dispute originated over the number of combs each weaver was to tend, but after a stoppage of work for a few days it was agreed that employers and employees were to co-operate in deciding such questions, and work was resumed on February 27. On October 5, practically all employees of certain woollen textile mills in Lawrence, Andover, North Andover, Dracut and Lowell, Massachusetts, numbering 20,000, were on strike against a 10 per cent reduction in wages. By November 10, the strikers had voted to return to work and about half the number were immediately reemployed with others to be taken on later. One mill, however, employing about 6,000 workers was reported to have been closed indefinitely.

Thirty thousand men's clothing workers in New York City and vicinity went on strike July 29 to enforce union conditions under agreement. The next day the clothing manufacturers' association signed the new agreement, both sides having made some concessions. Agreements were made from time to time with independent clothing manufacturers and by August 21, the dispute was practically terminated.

There were a number of disputes in coal mining involving large numbers of workers during 1931. On March 19, a strike began in the Wyoming and Lackawanna Valleys in Pennsylvania involving 20,000 anthracite coal miners who protested against certain working conditions, but work was resumed April 9 on the understanding that company officials would meet the miners' committee to discuss the grievances. These miners, 20,000 in number, were again out on strike from September 28 to October 12 when work was resumed under the same agreement as before. Another strike of 7,000 anthracite coal miners in the Panther Creek Valley, Pennsylvania, which lasted from April 4 to May 2, was an unsuccessful attempt on the part of the workers to have operating conditions changed so as to employ additional miners.

In the bituminous coal fields of northern West Virginia, western Pennsylvania and eastern Ohio, a number of strikes occurred between April and July, involving several thousand miners in each state. The miners demanded increased wages, improved working conditions and union recognition, and were successful in securing union agreements with some coal operators in West Virginia and Pennsylvania, but in other cases, no definite settlement was reported. Work was generally resumed, however, by the end of July.

### Educational Courses for Unemployed Office Workers

Professors at Harvard University, the Massachusetts Institute of Technology and other institutions of learning at Boston, are providing "university courses" for unemployed office workers, each course lasting twelve weeks. About 1,300 unemployed high school graduates attend the classes each afternoon of five days weekly. The scheme was planned by Mr. William Philipps, former United States Minister at Ottawa, and now chairman of the Massachusetts Emergency Committee on Unemployment.

On registration, each unemployed student is required to pay 25 cents fee, after which there is no further expense to him whatever for instruction. The fee is required to insure that only those really anxious to take part would apply, and to cover registration expenses. The lectures, the organization work, the use of four centrally located halls, etc., were all provided free of charge. The 23 courses include utilitarian studies, such as accounting, marketing and salesmanship, and liberal studies such as literature, and appreciation of art and music. Emphasis was placed

at first upon the more useful studies, but it was soon found that there was a great demand for cultural lectures rather than for occupational training.

Free classes on similar lines are being planned for unemployed office workers at Montreal.

The recent Speech from the Throne in the Saskatchewan Legislature stated that "notwithstanding economic handicaps, it is significant and indicative of the faith of the people in their province, that during the past year over six hundred thousand dollars worth of land was disposed of by the new Department of Natural Resources. The policy of providing recreational grounds for our citizens and for those who may visit this province from time to time has been inaugurated. This work of improving our provincial parks is being carried on under the provincial scheme of providing work for single men and it may be pointed out that this is but a continuance of the policy followed by the federal governments during past years."

## COMBINES INVESTIGATION ACT

### Members of Electrical Contractors' Combine Convicted—Plumbing Combine Appeals Dismissed in Supreme Court—Motion Picture Prosecutions

#### Electrical Estimators' Association

**F**INES totalling \$26,200 were imposed on seven corporations and fifteen individuals associated with the Electrical Estimators' Association, a combine of electrical contractors in Toronto, by a judgment delivered by Mr. Justice Raney in the Ontario Supreme Court on January 12, 1932. The prosecutions resulted from an investigation into this combine under the Combines Investigation Act. The committal of the accused for trial was reported in the *LABOUR GAZETTE*, October, 1931, page 1075. The case was brought before a Grand Jury on October 9 and a true bill was returned against the accused parties. The trial commenced on November 23 and, after adjournment, was concluded on December 15. The defendants elected trial by judge, without a jury.

Each of the defendants was found guilty under four counts of the indictment, two of which were laid under the Combines Investigation Act and two under section 493 of the Criminal Code. The charges on which the members were convicted related to conspiracy or agreement to enhance prices and prevent or lessen competition unduly or unreasonably and against the public interest, contrary to the Combines Investigation Act and the Criminal Code. The fines were imposed under the Combines Investigation Act and amounted to \$2,500 in the case of each of the seven corporations, \$1,000 for each of the eight individual contractors, and \$100 for each of the seven individual defendants who were representatives of their respective corporations in the Electrical Estimators' Association.

The chief system practised by the combine required each member, before tendering on a job, to submit his costs to the association secretary, who then averaged them and "awarded" the contract to the member whose costs were nearest the average. This contractor then added an agreed percentage to cover overhead and net profit, announced his tender price to the other members, and the other members tendered for the job at higher figures. Only contracts amounting to over \$1,000 were handled. About sixty large contracts were allotted by the Association during the two years in which it operated, including school, library, hospital, office and factory buildings, as well as some of the larger resi-

dences in the city. Unreasonable enhancement of price was proved in many of these contracts. T. H. Lennox, K.C., and J. D. Lucas appeared for the Crown, and G. R. Geary, K.C., and five other counsel appeared for the defendants.

The following are extracts from the lengthy judgment in the case:

THE KING *v.* HARRY ALEXANDER, LIMITED,  
ET AL

*Ontario Supreme Court, Raney, J.*

*January 12, 1932*

*Raney, J.:* Seven of the defendants are corporations which were carrying on business as electrical contractors in Toronto in 1927, 1928 and 1929. Nine other defendants were electrical contractors in their individual characters. These sixteen electrical contractors and one other, since deceased, were associated together in what they called the Electrical Estimators' Association. Seven other defendants were representatives of their respective corporations in the Association. The Association was not incorporated.

The defendants were indicted under both the Criminal Code and the Combines Investigation Act, R.S.C., chap. 26.

There are three counts under the Criminal Code and three counts under the Combines Investigation Act. Two of the counts are laid in restraint of trade, two for enhancing prices and two for preventing or lessening competition.

There is no evidence in this case of any restraint of trade that did not come within the categories of "enhancing the price" or "preventing or lessening competition." My conclusion therefore is that counts 1 and 6 of the indictment charging the defendants (count 1) with conspiracy in restraint of trade, and (count 6) with being members of a combine "restraining or injuring trade," may be ignored.

Section 498 is limited in its application to "any articles or commodities which may be the subject of trade or commerce." There is no such limitation in the Combines Act.

In that view the main question to be answered by me is: Were the defendants parties or privies to or did they knowingly assist in the formation or operation of a combine which operated, or was likely to operate, to the detriment, or against the interest of the public, and which resulted from an agreement or arrangement which had or was likely to have both these effects? The four main elements for consideration are: 1, membership in a combine; 2, enhancement of price, actual or potential; 3, lessening of competition, actual or potential; 4, detriment to the public interest, actual or potential.

. . . As is suggested by section 2, combines may take many forms. One form, and perhaps one of the most pernicious, is the "gentlemen's agreement," by which all persons of the ring or combine agree to fix a standard price by which all must abide. The Crown alleges that the scheme of the Electrical Estimators' Association approximated this type of combine.

Then, as to the facts in evidence; competition had been keen in the electrical contracting business for some years, and early in 1927 some of the defendants conceived the idea of improving things by forming an association which would regulate and control the tenders of the members for Toronto jobs. Before putting the design into practice, a memorandum was prepared and submitted to counsel for an opinion, and an opinion in writing was secured; but though a good deal of reliance was placed by the defendants who were called as witnesses, and by counsel for the defence, upon the counsel's opinion, neither the memorandum nor the written opinion was produced in evidence.

The association was formed early in 1927, all the defendants, except two or three, being original members, these latter coming in later. There was a secretary who was paid one hundred dollars a month, and an office and letter-heads, and the name of the Association was in the telephone directory; but there were no directors, no executive committee and no minutes of meetings, other than private memoranda that were made by the secretary of the Association of the different jobs that came under consideration.

The method of procedure and operation of the Association was described by the secretary, who was a witness for the prosecution. [A detailed statement of the Association's methods follows.]

. . . A recital of those purposes and methods, without evidence before him of their effect upon prices, would arouse, I would expect, the indignation of the average jurymen. He would resent the meeting together of contractors who had been invited by owners to make independent tenders, to compare figures; the averaging by these men of figures representing proposed tenders, or of figures representing prime costs, and the addition to prime costs of such sum as the contractors concerned thought proper, to represent overhead and profits; the agreement by the assembled contractors, four or five or eight or ten, as the case might be, that one of their number should have the contract so far as by their action they could award it to him; to this end, the putting in by members of the Association of tenders at figures higher than the amount which they had agreed amongst themselves was a fair price for the work; the attempt to make a contract between a member of the Association and an owner without the knowledge or consent of the owner; the assistance given by the Association to a protected tenderer by leading the owner to believe that tenders higher than his were real tenders; the application by the contractors of the designation, "courtesy tenders", to what the jurymen would doubtless call bogus tenders, intended to beguile the owner. And the average jurymen would not be much mollified by the protest of the members of the Association that their governing motive was a fair price for both the contractor and the owner, and to escape the ravening competition, "red in tooth and claw" with the life blood of

the unhappy contractor to which he had been a victim prior to the formation of the Association.

. . . The primary effect, if not the purpose, of trade combines is to dictate the conduct of others without their consent, and preferably, from the point of view of the combiners, without their knowledge. And when ten of the defendants sat around a table and agreed among themselves without the knowledge of the Toronto Board of Education that the Board should pay \$58,000 for the electrical work in the Toronto West End Technical School, they were dictating to the ratepayers of Toronto that they should pay some \$8,000 of their money more than they would have been called upon to pay under an open, honest and competitive system of tendering, which the School Board had asked for and which the School Board thought it was getting. [Details of examples of enhancement of prices by the Association follow].

. . . The argument for the defence is that not only were the activities of the Electrical Estimators' Association not within the prohibitions of section 498 of the Criminal Code or the Combines Investigation Act, but that they were beneficial to the public. Witnesses said that before the time of the Association there was price cutting and peddling of contracts,—a more realistic phrase was throat-cutting,—and general demoralization, as a result of which some of them had ceased to attempt to get jobs by tender. An effect of this condition, it was suggested, was that jobs were skimmed, which was detrimental to the public interest. This argument is pertinent, because of the words "unreasonably" and "unduly" in section 498, and of the words "to the detriment or against the interest of the public" in section 2 of the Combines Act. Of course, if the system of open competition is more detrimental to the public than was the system of the Electrical Estimators' Association, as above described, then, perhaps, the Association ought to be commended rather than prosecuted. But the answer to this argument is, first, in the purposes and scope of the legislation—section 498 and the Combines Act; and, secondly, in the actual effect, in practice, of the application of the system of the Association, as established in the evidence during the trial of the action, and as above outlined.

. . . The lessening of competition was necessarily incidental to the scheme of the defendants, and in my view, apart altogether from its effect on prices, that scheme was, in the language of section 2 of the Combines Act, "likely to operate to the detriment or against the interest of the public".

. . . It is no answer that the motives of the defendants were to tender at a fair price, fair equally to the public as to themselves. This is just what the master plumbers of Toronto said when they were prosecuted before Mr. Justice Clute in 1905 (*Rea v. Master Plumbers*, 14 O.L.R. 295). That case ought to have been a sufficient warning to the defendants in this case. That case was under the present section 498, (then numbered 520 of the Code). The trial judge was moved to use strong language in characterising the conduct of the master plumbers, whose system included the main features

of the system that was twenty years later adopted by the defendants in the present case.

After describing the system of averaging the figures of proposed tenderers for plumbing jobs, and the "false and fictitious tenders" that were then put in by the members of the Master Plumbers' Association "varying slightly . . . so as to lead to the supposition that these tenders were honest and real"; and the further item of the system under which, if any member of the Master Plumbers' Association claimed the person asking for a tender as a customer, he should have, in a sense, the first right; and the further item of the system that the master plumber who received the job by grace of his confederates would pay a percentage by way of commission to the Association; the learned Judge proceeded to remark:

"That was the system, utterly destroying competition, utterly doing away with anything like a fair price. It was shewn in one case that the difference between the average tender and an outside real tender amounted to nearly \$6,000. But, no matter whether it amounted to more or less, the system was a fraudulent system. It was a combination carrying out their idea of limiting the trade to themselves. . . There was no competition in price. . . There was no pretence at an honest competition."

. . . It is to be said for the members of the Electrical Estimators' Association that their methods were less ruthless and less dishonest than those of the master plumbers of 1905, and less subtle, less ruthless and less dishonest than those of the members of the Canadian Plumbing and Heating Guild with whom Mr. Justice Wright had to deal (*Rex v. Singer et al*, 1931 O.L.R. 202), but the electrical contractors are clearly within the prohibitions of Section 498 and the Combines Act.

In the result I find the defendants not guilty under the first and sixth counts of the indictment, being the restraint of trade counts, but guilty under the second and third counts, which are under the Criminal Code; and guilty under the fourth and fifth counts, which are under the Combines Investigation Act.

. . . The penalties ought I think to be imposed under sec. 32 of the Combines Investigation Act.

The penalties ought not to be vindictive, but they should be substantial, and under all the circumstances, particularly in view of the prosecution of the Master Plumbers in 1905, and the result of that prosecution, they ought to be exemplary.

The seven corporations: Harry Alexander, Limited, Bayview Electric Company Limited, Beattie-McIntyre Limited, Bennett and Wright Company Limited, Canadian Comstock Company Limited, Canada Electric Company Limited, Electrical Maintenance and Repair Company Limited will each pay a fine of twenty-five hundred dollars.

The eight individual contractors, namely: A. O. Duncan, R. A. L. Gray, J. H. Harris, Gordon E. Moss, George W. C. Patterson, Gordon G. Richardson, E. L. Roxborough and Albert G. Muir will each pay a fine of one thousand dollars; and the seven individual defendants: Ivan Russell Church, George Kay, C. C. Rathgeb, Edward F. Longfellow, George T. Dale, Harry

Rohleder and Clarence Alfred Philp, who were the representatives of their respective corporations in the Electrical Estimators' Association, will each pay a fine of one hundred dollars.

The constitutionality of the Combines Investigation Act having now been established by the Judicial Committee of the Privy Council, perhaps Parliament will consider the propriety, in the interests of simplifying the law, of the repeal of section 498 of the Criminal Code, and the clarification of the somewhat difficult language of section 2 of the Combines Act.

### Supreme Court Dismisses A.B.C. Appeals

Judgment in the appeals of the president and secretary-treasurer of the Amalgamated Builders' Council and related organizations, a combine in the Ontario plumbing and heating industry, against their convictions under the Combines Investigation Act and section 498 of the Criminal Code, was delivered in the Supreme Court of Canada at Ottawa on February 2, 1932. The judgment, written by Right Honourable Chief Justice Anglin, dismissed the appeals.

R. E. Belyea, president of the Amalgamated Builders' Council and of the Canadian Plumbing and Heating Guild, and H. A. Weinraub, secretary-treasurer of the same organizations, were convicted in the Supreme Court of Ontario, Appellate Division, in June, 1931, in a judgment reported in the *LABOUR GAZETTE*, July 1931, page 790. Each was sentenced to a fine of \$2,000 for infraction of the Combines Investigation Act and a fine of \$2,000 for offences in restraint of trade under section 498 of the Criminal Code. The appeals of each against the convictions were heard in the Supreme Court of Canada in November, 1931, when a similar appeal by Louis M. Singer, K.C., was quashed unanimously by the Court. The hearings concluded on November 19 and the judgment dismissing the appeals was delivered on February 2. The text of the judgment follows in part.

BELYEA v. THE KING.

WEINRAUB v. THE KING.

Supreme Court of Canada, Anglin, C.J.C., Rinfret, Lamont, Smith and Cannon, JJ., February 2, 1932.

W. F. O'Connor, K.C., for the appellants.

D. L. McCarthy, K.C., and J. C. McRuer, K.C., for the respondent.

Anglin, C.J.C.: These two appeals were heard together.

The appellants, Belyea and Weinraub, were both acquitted on trial before Wright J., without a jury. (R.S.C. 1927, ch. 26, s. 39; Cr. C., s. 581); but, upon appeal by the Attorney General under s. 1013 (4) of the Criminal Code, as enacted by c. 11, s. 28, of the Statutes of Canada, 1930, the Appellate Division was of the opinion that the learned trial judge had mis-

directed himself, in that he held that, although it was proven, if not admitted, that they, the appellants,

"took an active part in the original scheme,—the conspiracy which formed the basis for the prosecution; . . . because they were not proved to have taken part in subsequent over acts."

they should be acquitted, saying of one of the respondents,

"there is no evidence that connects him with any of the illegal operations."

The Appellate Division found that

"Belyea and Weinraub were most active in carrying out the projects of the conspiracy; were originally united with Singer himself in the conspiracy of which the latter was found guilty. They should have been convicted as were Singer, Paddon and Ward. Their part in the illegal acts was much greater than that of Paddon and Ward, but less than that of Singer."

Having found them guilty, that Court then proceeded to fine each of them one-half the amount of the fine imposed upon Singer.

After careful consideration of the evidence, of the very lengthy argument before this Court, which lasted more than two days, and of the "memorandum of points" and the supplementary factum of the appellants, we are of opinion that the appeals fail and must be dismissed.

The following findings of Wright J., in the course of his judgment, seem to us to be vital and leave no doubt as to the appellants' guilt. Moreover, they are all supported by the evidence. Indeed, as stated by counsel for the appellants in his memorandum, the fact-finding of the learned trial judge was good.

After setting out the indictment, and the circumstances leading up to the trial, and discussing the application for leave to move to quash the indictment, the learned judge said that, the prosecution of this case being the first case in the province under the Combines Investigation Act, the whole question should be fully considered. We take the following somewhat copious extracts from the judgment of the learned judge. . . (1)

"The last organization to be formed was the Amalgamated Builders' Council. Had it confined its operations to those authorized by the Trade Unions Act, no objection could well be taken, but from its operations it is clearly evident that the purpose of those responsible for its creation and operation was to avail themselves of any immunity provided by this Act, and if possible, evade the provisions of the Combines Investigation Act and the Criminal Code."

Counsel for the appellants fully accepted this finding at bar, and indeed, he rather gloried in the attempt so made to evade the law.

If sitting as a jury, we should have no hesitation in finding that the illegal acts done at Windsor were a result intended by the defendants and their fellow conspirators when they formed the organizations found to have been a combine and a conspiracy. But we do not proceed on this ground, since this would involve making a finding of fact contrary to a finding of the trial judge.

Counsel for the appellants argued at considerable length that the Appellate Division had ex-

ceeded its jurisdiction in this case because it reversed the trial judge on what counsel called a finding of fact, i.e., the innocence of the accused of participation in the formation of an illegal combine and of conspiracy within s. 498, Criminal Code. This, it seems to us, involves a clear misconception of the true question in issue. Having determined that the formation of the various organizations in question amounted to the formation of an illegal combine, and to a conspiracy within s. 498, Criminal Code, the learned judge proceeded to deal with the questions as to who had incurred criminal responsibility. He convicted Singer, Paddon and Ward on evidence which, in our opinion, clearly implicated Belyea and Weinraub, in much the same manner in which Singer and his companions were involved, in the formation of the combine and conspiracy in question. He fell into error, however, when he proceeded to find that it was essential to a finding of guilt of the accused, that they should be held to have had actual knowledge of, or to have actually participated in, the overt acts at Windsor.

Mr. O'Connor, somewhat ingeniously, argued that, where there is an "inferred conspiracy", or an "inferred combine", as he termed them, proof of the existence of which depends largely on certain overt acts, it is necessary to show privity of the accused to, or participation by them in, such overt acts, in order to make them liable for the formation of the combine or the conspiracy. This seems to us to be a fallacy. The moment it is established that a combine or conspiracy existed, it is unnecessary, in order to warrant a conviction of the respondents for the formation of the combine, or of the agreement to conspire, to show their complicity in subsequent illegal acts done by, or with the connivance of, the body against members of which conspiracy or unlawful combine is charged; provided always, of course, that there is, in the evidence, sufficient proof of the complicity of the accused in the original formation of the combine, or in the agreement charged as conspiracy. Here, the learned trial judge apparently had already found facts from which the conclusion was inevitable that there was guilt on the part of Belyea and Weinraub in regard to the formation of the illegal combine and the conspiracy, the existence of which he had already found to be proven. On these findings, coupled with the admissions made by Belyea and Weinraub in their testimony, and the documents of which they were proved to have knowledge, their convictions, as was held by the Appellate Division, were a necessary consequence.

For these reasons, we are of the opinion that the appeals fail and must be dismissed.

O'CONNOR v. WALDRON

The case of *O'Connor v. Waldron*, an appeal by counsel for the Amalgamated Builders' Council against dismissal of his action for damages for slander in words alleged to have been spoken by the defendant while acting as a commissioner under the Combines Investiga-

<sup>1</sup> The judgment of Wright J., in *R. v. Singer et al*, extracts from which are here omitted, is reported in the LABOUR GAZETTE, April 1931, pp. 430-434 and, in full text, in (1931) Ontario Law Reports, pp. 202-221.

tion Act in the A. B. C. investigation in 1929, was heard in the Supreme Court of Canada in November, 1931. The judgment of the Ontario Supreme Court, Appellate Division, from which the plaintiff appealed, was reported in the LABOUR GAZETTE, July, 1931, page 791. The unanimous judgment of the Supreme Court of Canada, delivered on December 22, 1931, dismissed the appeal with costs. The judgment, written by Honourable Mr. Justice Smith, and reported in full text in (1932) 1 Dominion Law Reports, pages 166-169, states in part:

This is an appeal by the plaintiff from a judgment of the First Appellate Division of the Supreme Court of Ontario upholding, by a majority of four to one, the judgment of the Honourable Mr. Justice Orde, dismissing the plaintiff's action upon motion in weekly court. The first ground of appeal is that there were relevant and material issues of fact outstanding and undetermined, making it improper to dispose of the case in weekly court on motion.

I agree with Mr. Justice Orde that the pleadings and the admissions made by the plaintiff in the particulars furnished by him and on his examination for discovery, made it quite clear that the words were spoken by the defendant during the course of certain proceedings which he was conducting as a commissioner appointed by letters patent under the Great Seal of Canada, by the Governor General, under the authority of the Combines Investigation Act, R.S.C., 1927, ch. 26, and of the Inquiries Act, R.S.C., 1927, ch. 99.

The only question to be determined therefore was one of law as to whether or not the commissioner so acting was entitled to absolute privilege. For this reason the motion was properly entertained by the learned judge.

A very full discussion of the law on the question at issue, with a review of the cases applicable, appears in the reasons for judgment of Mr. Justice Orde on the motion and in the reasons of Mr. Justice Middleton in the Appellate Division. I agree with their reasons and conclusions and would only add to what they have said a reference to the case of *Hearts of Oak Assurance Company, Limited v. Attorney General*, 1931, 2 Chy., 307, decided since the judgment herein of the Appellate Division.

In the Acts under which the commissioner was appointed in the present case, he is given the most ample powers for compelling witnesses to attend and to answer questions on oath and to compel the production of documents; and there is provision that parties whose conduct is being investigated, or against whom charges are made,

are to be given opportunity to be present and to be heard and to be represented by counsel.

What is said therefore in *Hearts of Oak Assurance Company Limited v. Attorney General* seems to be rather in support of than against the judgment here appealed from.

The appeal must be dismissed with costs.

### Prosecutions in Motion Picture Industry

The trial of fifteen companies and three individuals charged as parties to an alleged combine in the motion picture industry in Canada commenced before Mr. Justice Garrow in the Criminal Assizes at Toronto on January 25, 1932. The investigation into the alleged combine was completed under the Combines Investigation Act in June, 1931, by Peter White, K.C., appointed as a commissioner to conduct the investigation, and was reported in the LABOUR GAZETTE, July, 1931, pages 786-789. In October a true bill was returned against the parties charged by the Crown and the case was adjourned to the Winter Assizes. A motion made by W. N. Tilley, K.C., counsel for the defendants, that the indictment be quashed because of alleged insufficiency of detail in the charges was heard before Mr. Justice Kelly on October 30. On November 7 a decision was given refusing to allow the motion. Further particulars were furnished to the defendants by the Crown on an order of Mr. Justice Wright, and, after an additional motion on January 25 by the defendants for the quashing of the indictment, the trial proceeded on January 26. The eighteen defendants were tried before Mr. Justice Garrow without a jury on all three counts of the indictment; one count being under the Combines Investigation Act and two under section 498 of the Criminal Code.

R. H. Greer, K.C., conducted the prosecutions for the Crown, assisted by I. A. Humphries, K.C., C. L. Snyder and B. L. Smith. The defendants were represented by some fifteen counsel including W. N. Tilley, K.C., chief counsel; Arthur G. Slaght, K.C., R. S. Robertson, K.C., A. C. McMaster, K.C., and F. J. Hughes, K.C. The case had not been concluded at the end of the second week's hearings.

### Price Control and Wage Reductions in Germany

An emergency decree signed by President Von Hindenburg in December provided that wages and salaries generally should be reduced to the level of January 10, 1927. The "cut" might, as a rule, amount to not more than 10 per cent, but in all cases where wages had not been reduced since July 1, 1931, they might be cut by 15 per cent. The parties

to collective agreements were required to meet before December 19 and to agree to new scales of wages payable after January 1, 1932. If the parties could not come to an agreement, they were to appeal to the competent arbitration officer, whose decision would be binding and final. In exceptional cases the arbitration officer was empowered to adjust in-

consistencies of wage scales due to changes in the system of payment of wages.

After the reduction of wages, a reform of the existing system of collective agreements was to be carried out. Whenever necessary, general agreements might be replaced by agreements for individual districts or branches of industry. The agreements were to be made more elastic so as to become adaptable to undertakings in a difficult situation. As from January 1, 1932, salaries of civil servants and pensions of retired civil servants were to be reduced uniformly by 10 per cent.

The benefits of various branches of social insurance were to be further reduced. Pending the issue of new regulations sickness insurance funds were to grant regular benefits only. Supplementary benefits might, however, be granted if contributions amounted to less than 5 per cent of the basic wage. Payments to doctors were to be regulated according to a uniform plan. Accident insurance was subject to a number of changes,

the most important of which was that in future accident compensation should not be paid if the loss of earning power following an industrial accident was less than 20 per cent.

Simultaneously with the reduction of wages, the Government intended to bring about a reduction of prices, rents and interest on capital in order to maintain the purchasing power of wage and salary earners.

Prices fixed by cartel conventions, prices of coal and potash, etc., freights, charges for gas, water and electricity, were to be reduced by 10 per cent as compared with their level on July 1, 1931. The Minister of Industry was empowered to dictate further reductions of the prices of certain articles. No new increases of prices were to be permitted before July 1, 1932. A Price Commissioner was to be appointed who would have to supervise the reduction of prices and would have the right to close businesses that did not reduce their prices.

## COMMISSION APPOINTED TO INVESTIGATE COAL MINING INDUSTRY IN NOVA SCOTIA

**B**Y a recent Order in Council a Royal Commission has been appointed in Nova Scotia to inquire into the condition of the coal industry of that province. As in 1925, the chief factor which determined the establishing of an inquiry was a dispute between the chief coal mining operator and the employees as to the wage schedule. Sir Andrew Rae Duncan, who was chairman of the 1925 Commission, is again appointed chairman of the present investigation.

In October, 1925, the Government of Nova Scotia appointed a Royal Commission to inquire into the coal mining industry of the province. (LABOUR GAZETTE, October, 1925, page 951). Leading up to the appointment of that commission was a wage dispute. One of the terms of settlement of the dispute was the provision that all controversial points not disposed of between the parties were to be referred to a Royal Commission. The members of that Commission were Sir Andrew Rae Duncan, who was coal controller for the British Government in 1919-20; Rev. Dr. H. P. MacPherson, President-Rector of St. Francis Xavier University, Antigonish; and Mr. Hume Cronyn, ex-M.P. of London, Ontario, and president of the Mutual Life Assurance Company of Canada. The Commission made an exhaustive inquiry into the coal mining industry in Nova Scotia, which resulted in settled conditions in the coal industry for the ensuing six years.

In negotiations to renew the agreement expiring January 31, 1932, the Dominion Steel and Coal Corporation notified the United Mine Workers of America, District 26, representing the employees in its coal mines of its intention to put into effect a wage reduction of 10 per cent and upwards. The miners refused to agree to such reduction, and both parties accepted a proposal of the Government to appoint a Royal Commission, to be again headed by Sir Andrew Duncan. Rev. Dr. MacPherson is also again serving, but as Mr. Cronyn was unable to accept appointment, Professor John W. MacMillan, of Victoria College, Toronto, and chairman of the Ontario Minimum Wage Board, was appointed the third member of the Commission.

The present wage contract, which the company sought to reduce, terminated on January 31, but by mutual agreement was extended one month pending the Commission's appointment.

The terms of reference as contained in the Order in Council are as follows:—

1. Income, rates of wages, hours and conditions of employment prevailing in the various classes or occupations of mine workers above and below ground; and whether and if so to what extent and by what means such income, wages, hours or conditions should be varied or revised, having regard to the best interests of the industry and those employed therein; any inequalities between the different classes of mine workers as regards wages, hours, and conditions of employment, and whether and if so

to what extent any of such inequalities are unjustifiable or unfair and what remedy or remedies should be applied.

2. All factors directly or indirectly entering into the cost of production, transportation, distribution and marketing of coal and its by-products, and whether such costs have been

or are excessive and if so to what extent and for what reason or reasons.

3. All such other conditions and matters whatsoever whether of the kind hereinbefore mentioned or not which directly or indirectly have affected or are relevant to the state or condition of the coal mining industry in the Province, as may be deemed expedient by the Commissioners.

OLD AGE PENSIONS IN CANADA

Statistical Summary of Administration during Fourth Quarter of 1931 and Since Inception of the System

THE accompanying tables give particulars of operations under the Old Age Pensions Act (Revised Statutes of Canada, 1927, chapter 156) and the various provincial concurrent Acts, during the fourth three months of 1931, and since these Acts became severally effective. Similar tables, bringing the statistics down to September 30, 1931, were given in the LABOUR GAZETTE, November, 1931. The text of the Old Age Pensions Act was given in the issue for April, 1927, page 375. It makes provision for the establishment of a Dominion Provincial pension system to be effective in such provinces as have enacted and given effect to special legislation for this purpose. These provinces are British Columbia, Al-

berta, Saskatchewan, Manitoba, and Ontario. The New Brunswick Legislature passed an Old Age Pensions Act at its session in 1930, to become effective on its proclamation by the Lieutenant Governor in Council; while in Nova Scotia and Prince Edward Island Acts providing for the participation of these provinces in any federal scheme were passed at the session of 1931, both these Acts to take effect on proclamation.

Under the Old Age Pensions Act a pension is payable to any British subject of 70 years and upwards who is not in receipt of an income of as much as \$365 a year and who has resided in Canada for the 20 years preceding, and has also resided in the province in which

TABLE I.—FINANCIAL SUMMARY OF OLD AGE PENSIONS IN CANADA AS AT DECEMBER 31, 1931

	Alberta — Act effective Aug. 1, 1929	British Columbia — Act effective Sept. 1, 1927	Manitoba — Act effective Sept. 1, 1928	Ontario — Act effective Nov. 1, 1929	Saskatche- wan — Act effective May 1, 1928	Northwest Territories — Order in C. effective Jan. 25, 1929	Totals

the application is made for the five years immediately preceding the granting of the pension. The maximum amount of pension payable under the Act is \$240 yearly. In cases where pensioners have a private income the amount of their old age pension is subject to a reduction by the amount, if any, that their private income exceeds \$125 a year. The administration of old age pensions is entrusted to the authorities appointed by the respective provincial governments.

### Increase in Dominion Contribution

Under the provisions of the Act as it was first passed the Department of Labour of Canada paid quarterly to each province one-

half of the total amount of the pensions paid by the provincial pension authority during the preceding three months. At the last session of the Dominion Parliament, however, the Act was amended, the amount of the Dominion contribution being increased from fifty per cent to seventy-five per cent of the total expenditure, this amendment to become effective on July 31, 1931.

It is expected that new agreements between the Dominion and Provincial Governments under the provisions of the amending Act of 1931 will shortly be completed, and when they are completed the amount of the Dominion Government's contribution will be revised accordingly.

### Conditions in Saskatchewan

The Speech from the Throne at the opening of the Saskatchewan Legislature on February 4 referred to the general economic and industrial depression in the Province and throughout Canada. "The low level of prices prevailing for agricultural products," it stated, "together with two and three successive crop failures in a large portion of our Province and the consequent curtailment of business and industry, have resulted in widespread unemployment and distress." Various plans were adopted to meet these conditions, details of which would be furnished later in the session.

"The Provincial Department of Agriculture was engaged during the past year in the purchase of fodder, the location of pasturage for live stock and the removal of settlers from drought affected areas to localities where fodder was plentiful. . . .

"During the past year our municipalities, both urban and rural have found themselves confronted with problems of a most serious nature. These have resulted in decreased revenues for our municipalities, on the one hand and on the other increased expenditures to assist in providing food, fuel, clothing, fodder and relief works for the unemployed. . . .

"Owing to the very serious drought conditions prevailing over a large part of the southern portion of the province during the

last three years and the many problems incident thereto which are a matter of grave economic concern, my Government has appointed a commission to make a thorough study of the causes of drought conditions in Saskatchewan with a view to ascertaining the causes and in the hope of providing a remedy against the recurrence of such conditions.

"My Government, through its Department of Railways, Labour and Industries, provided additional assistance to our people during the past year in the administration of urban and farm labour relief. From September, 1930, to September, 1931, a total expenditure for relief public works of two million, seven hundred thousand dollars was administered through this department and gave employment to thirty-three thousand, four hundred and two persons. During the same period direct relief to the extent of over one million, two hundred thousand dollars was provided for twenty-nine thousand, seven hundred and eighty-five persons. Beginning with September, 1931, a new system of direct relief administration was adopted and is now being carried out, particulars of which will be placed before you during the Session. An extensive scheme connected with farm labour relief has been adopted whereby nearly six thousand farm labourers have been retained on the farms, who otherwise would have undoubtedly drifted into the urban centres seeking relief."

## REDUCTION OF WORKING HOURS TO RELIEVE UNEMPLOYMENT

### Recommendations of Governing Body of International Labour Organization

THE Governing Body of the International Labour Office, at its fifty-sixth session in January, adopted by 15 votes to 3 the resolution and report of its Unemployment Committee, the text of which is as follows:—

“The Governing Body, having regard to the increasing gravity of the unemployment crisis; recognizing that the crisis can only be solved by the adoption of economic, financial and political measures which are outside the competence of the International Labour Organization: urges Governments in the first place actively to explore every possibility of increasing employment both nationally and through the international organizations, urges in particular that the international action which has been undertaken with regard to public works should be pushed forward with the greatest possible energy.

In conformity with the resolution adopted by the Governing Body at its Session of October 1931, the Committee has devoted special attention to “the possibility of arriving at a more satisfactory arrangement of hours of work by international agreement, whether general or by industry”; taking note of the fact that in all industrial countries efforts of various kinds have been made spontaneously in the majority of undertakings for the purpose of keeping in employment the largest possible number of workers in spite of reduced production; The Committee considers that in present circumstances it is more than ever desirable that the International Conventions on hours of work, and, in particular, the Washington Convention, should be ratified, and that in any case pending ratification their principles should be, or continue to be, universally applied so as to constitute a solid framework for all the arrangements proposed below:

(1) Overtime should be abolished. In exceptional cases, in which that is impossible, owing to technical difficulties, seasonal requirements, or the necessity of complying with a time limit in executing orders subject to a penalty for non-fulfilment, it should be reduced to a strict minimum.

(2) Whenever the technical conditions, the composition of the staff and the individual position of each wage earner permit, the hours of work of each worker should be diminished for the whole of the staff in preference to discharging workers. This diminution may be brought about by reducing either the number of hours per day or, preferably,

the number of days per week. It may also be achieved by a periodical rotation of workers over a period of weeks. The Committee draws attention to the measures taken in certain countries to facilitate these practices by paying unemployment benefits during the period of idleness.

(3) In spite of serious difficulties, which however, it would seem possible to overcome, and subject to technical, commercial and financial possibilities, the principle of diminishing temporarily the hours of work of each worker should be adopted in those undertakings which are working at normal capacity so as to make it possible to engage unemployed workers in those undertakings.

(4) With a view to redistributing employment among as large a number of workers as possible, while at the same time preserving the satisfactory working of the establishment and maintaining the individual earnings of the workers at an adequate level, it appears that under the conditions of the present crisis the best results have been obtained by reducing the weekly working period to a figure approximately to 40 hours, distributed over the week by different methods, but preferably distributed equally over 5 days where the technical conditions allow.

(5) The Committee thinks it desirable to draw attention to the fact that in certain countries measures have been adopted to make up for the possible reduction in weekly earnings, at least in part, and that this has been facilitated by a decrease in social charges due to the re-employment of a certain number of wholly unemployed persons.

(6) It considers it desirable to draw attention to the importance of the measures adopted in the legislation of different countries to safeguard the rights to superannuation or to insurance benefits of workers subject to these special arrangements concerning hours of work.

The Committee recalls that, without wishing to take the initiative in bringing about international negotiations, certain Governments have expressed a desire that temporary agreements concerning the hours of work should be arrived at in certain industries. It invites the Director to study these suggestions or desires, to consider in respect of different industries whether the situation is such as to render international agreements possible, and if so, to offer his services to the Governments concerned with a view to convening any meeting which may be considered useful for this purpose.

The Committee had a mandate at its present Session only to study arrangements of hours of work during the crisis. It has taken note of the desires of the workers' organizations in favour of the 40-hour week, and also of the opinion formulated by certain industrial employers that when prosperity has been re-established a permanent reduction of hours of work might be possible in those industries in which technical progress has been considerable.

It invites the International Labour Office henceforward to pay particular attention to this question in the course of its investigations with a view to submitting the information obtained, especially on the experience gained in certain cases, to the Governing Body at a later date.

The Governing Body also requested the Director of the International Labour Office to take all the necessary steps to hasten the study of the competent organs of the League of Nations of the proposals sanctioned by the Twelfth Assembly of the League of Nations, and more particularly the plans for large-scale public works of international and national interest.

The new Constitution of Afghanistan, which was published on October 30, 1931, contains a provision declaring that slavery is prohibited in Afghanistan and that no man or woman may be taken as a slave.

### Winnipeg Typographical Union and Unemployment

The benefits provided for members of the International Typographical Union were outlined by W. B. Lowe in the *Winnipeg Tribune*, January 30, 1932, in an article describing the unions recent activities at Winnipeg. "The Winnipeg Typographical Union," he writes, "a body of 400 workers: compositors, linotype and monotype operators, working in the newspaper and commercial printing offices of this city—has fully taken care of all of its members who have been affected by the slackness of work that has been suffered by the printing trade in common with all others. For a period of a year and a half this organization has been paying out to its unemployed members a sufficient amount weekly to enable them to take care of their immediate living expenses. The amount paid to married men totally unemployed is \$16.00 per week, that to single men, \$8.00. Important to remember, too, is the fact that this has not been given out in any charitable sense, but as a benefit to which membership in the organization has fully entitled the recipients. The extent of this work and what it has meant to the beneficiaries of it can be estimated when it is stated that for the period during which it has been in effect a total of nearly \$15,000 has been paid out for this purpose by the organization. The highest amount paid out in one month was \$1,822 in the month of October, 1931. The monthly average has been \$1,115.

"To carry on this special work of paying unemployment benefit to its members the organization adopted a special assessment on the earnings of members ranging from one per cent to two and one half per cent according to the amount earned. Those members earning the higher amounts weekly paid a higher percentage of assessment. Thus the members who were fortunate to be in a job and drawing wages paid into the funds of the union to enable it to protect and provide for the less fortunate ones forced out of employment at this time.

"In addition to this special unemployment activity the Winnipeg Typographical Union maintains a sick benefit fund which pays \$10.00 per week to members who are forced off work through sickness. During the past year a total of \$1,178.00 has been distributed for this purpose. Other beneficial activities of this organization of printers are brought into play through its affiliation to the parent body, the International Typographical Union. Briefly they are: A mortuary benefit fund which pays a maximum of \$500.00 upon the death of a member; an old age pension scheme under which members who are 60 years and over, with twenty-five years membership and who are unable to follow their employment, are paid a pension of \$8.00 per week as long as they live."

### System of Unemployment Relief at Hull, Quebec.

The methods followed by the City of Hull, Quebec, for the administration of unemployment relief, were described by Mr. T. Lanctot, chief engineer, in the *Municipal Review of Canada*, January, 1932, as follows:—

The system is divided into three phases: (1) The registration of unemployed, for con-

structions to be undertaken by the City, according to unemployment law; (2) Organizations of St. Vincent de Paul and the Société de Bienfaisance; (3) A voluntary civic committee.

1. A complete registration of unemployed was made at the City Hall. For this purpose

a questionnaire had been prepared, enquiring the name and age of each unemployed person, whether married or single, his place of residence, and the number of persons dependent upon his work. Nearly 2,000 persons, were registered. Having completed this, a classification was made of all the names, allotting to each division of the city the number of its unemployed (the city is divided into seven districts). The aldermen of each division were then handed the list of people resident in their constituency, and they further classified them, in an order according to their need. The men are engaged for public works on Saturday morning, being selected from each respective division, the number of such being based upon the proportion of unemployed in that division to the total number registered.

2. St. Vincent de Paul and welfare organiza-

tions: These two societies attend particularly to cases of poverty where members of the community are without means to provide for their needs except through charity. Close investigation is made into every appeal received by these bodies and cases are all treated in impartial manner. These associations are upheld by public charity, and the City Council has contracted to make up any deficits which the different societies may incur in exercise of this work.

3. The Civic Committee: Under leadership of the Mayor Théo. Lambert, a committee of citizens was recently formed to provide effective relief to the unemployed. Voluntary subscriptions were solicited and a fund was established for the purpose of rendering a certain set amount available for distribution each week throughout the winter.

## ROCHESTER UNEMPLOYMENT BENEFIT PLAN

THE "Rochester Plan" for controlling employment and relieving unemployment has attracted considerable notice in the United States, and was recently pronounced by a committee of the United States Chamber of Commerce to be a "typical plan for the establishment of unemployment benefits." An account of the plan was given recently by Marion B. Folson, assistant treasurer of the Eastman Kodak Company, at Rochester, New York, in a paper read before the Academy of Political Science, as one of a series of addresses and papers presented at the annual meeting of the Academy dealing with the question of the possible regulation of prices, production and employment (Proceedings, vol. XIV, No. 4, January, 1932).

Nineteen firms, employing about 40 per cent of the industrial employees in Rochester, New York, have now adopted the Plan.

The "Rochester Plan" is as follows:—

1. Employees Eligible.—Employees will be eligible to benefits under this plan provided they have been in the employ of the company for a continuous period of not less than one year and provided their earnings on a full-time basis for the past three months have averaged less than \$      a week. (The amount to be inserted should be determined on the basis of local conditions.)

2. Unemployment Reserve Fund.—An unemployment reserve fund will be created. The company will make an appropriation annually, beginning during the current year, of not less than 2 per cent of the total pay roll until

five<sup>1</sup> annual appropriations shall have been made. The company may then suspend further appropriations when the reserves actually available in the fund are at least equal to the sum of the last five annual appropriations, but appropriations shall be resumed as soon as such reserves fall below that minimum, and continued until such minimum is restored. All income received from the investment of the fund will be added to the principal.

When after benefits become payable a prolonged period of unemployment occurs and, in the opinion of the management, the fund will be inadequate to take care of the benefits payable, the management may declare that an emergency exists. Upon this declaration of emergency, all officials and employees of the company who are not receiving unemployment benefits will be assessed one per cent of their earnings. Deductions therefor will be made from the weekly or monthly pay, and such deductions will be added to the unemployment reserve fund. The company will appropriate into the fund an amount equal to these deductions in addition to the annual appropriations. The deductions will continue until the management declares that the emergency is over.

3. Effective Date of Plan.—Benefits will become payable under the plan two years<sup>2</sup> after date of inauguration.

<sup>1</sup> The proper percentage and the number of annual appropriations will depend upon the company's unemployment experience and the degree of stabilization prevailing in the particular industry.

<sup>2</sup> Benefits may be payable earlier provided sufficient reserves are available.

4. Control and Administration of the Plan.—A committee will be appointed by the management to administer the plan and to define and interpret its terms and conditions. The decisions of this committee will be subject only to the general control and direction of the Board of Directors of the company.

5. Unemployment Benefits.—The unemployment benefits shall be paid weekly at the rate of 60<sup>3</sup> per cent of the average weekly earnings of the unemployed person, with a maximum of \$ a week. (The amount to be inserted should be determined on the basis of local conditions.) The last three months of full time employment exclusive of overtime will be the period for determining the average earnings.

6. Waiting Period.—No unemployment benefits shall be payable to eligible employees for the first two continuous weeks of unemployment.

7. Maximum Period During which Benefits shall be paid.<sup>4</sup>

The maximum number of weekly benefits to be paid during twelve consecutive months or during any one continuous period of lay-off shall depend upon the employee's length of service prior to such lay-off, as follows:—

Length of Service—	Benefits
1 year to 1½ years. . . .	6 weeks
1½ years to 2 years. . . .	8 weeks
2 years to 3 years. . . .	10 weeks
3 years to 4 years. . . .	11 weeks
4 years to 5 years. . . .	12 weeks
5 years and over. . . .	13 weeks

8. Unemployment Benefit for Part Time Workers.—If, on account of slack work, an employee is receiving reduced pay due either to transfer or to part time work, the deficit, if any, between his actual earnings and the amount he would receive in benefits, under the plan were he wholly unemployed, shall be paid to him out of the Unemployment Reserve Fund. Such payment will cease when the employee has received an amount equal to the full unemployment benefits provided in paragraphs 5 and 7.

9. Benefits to Employees Securing Work Outside.—If an employee receiving benefits secures permanent work outside and is no longer available for work with the company, the benefits shall cease. An employee securing temporary work outside will still be eligible for benefit, but in no case shall his weekly benefit exceed the deficit, if any,

<sup>3</sup> Benefits and length of service, adopted in the Rochester Plan, after investigation of necessary requirements.

<sup>4</sup> Benefits and length of service, adopted in the Rochester Plan, after investigation of necessary requirements.

between his earnings on the temporary work and his average full time earnings on which his weekly benefits are based.

10. Conditions for Receiving Unemployment Benefit.—In order to receive the benefit, a laid-off employee shall report to the company as frequently as the company may require. A blank will be furnished on which he will be required to state what steps he has taken to secure employment. An employee making a false statement on this blank shall forfeit his benefits under the unemployment plan.

NOTE.—If a suitable employment exchange is available in the community, add the following: The employee must also register at the employment exchange. When a job is available, the exchange will be asked to notify both the employee and the company, and if the employee refuses to accept work, which he can reasonably be expected to undertake, his benefits shall cease.

11. Benefits Not Assignable.—Benefits under the plan shall not be assignable by the employee, nor subject to the claims of his creditors.

12. Change or Discontinuance of Plan.—The company may, with three months notice to employees, change or discontinue this plan at any time at its discretion, provided that such change or discontinuance will not affect the further payment of benefits to the extent provided by the fund available at the time of change or discontinuance.

The payment of benefits will cease if and when the Reserve Fund becomes exhausted.

13. Reservations.—(1) No unemployment benefits shall be paid to employees who have been employed for temporary work and were so notified when they were employed, unless they subsequently become regular employees.

(2) No benefits shall be paid for time off on account of the destruction of any part of the company's property by fire, lightning, earthquake, windstorm, or other accidents, but the company may at its discretion make payments to employees affected by such destruction.

(3) No benefits shall be paid to employees for unemployment due either directly or indirectly to strikes or other trade disputes in the company's plants or elsewhere.

(4) No benefits shall be paid to an employee laid off who fails to take such steps as may be required to secure employment or who fails to accept a transfer to a reasonable job either with the company or elsewhere.

(5) No benefits shall be paid to any employee who has been discharged for cause, or who voluntarily leaves the employ of the

company, or who ceases to be employed for any reason other than lack of available work.

(6) No benefits shall be paid to employees receiving or entitled to receive sick benefits, accident compensation, disability benefits, or retirement annuities. Such employees shall be

eligible for unemployment benefits only when sick benefits, accident compensation, or disability benefits have been exhausted and when they are capable of resuming work.

(7) Upon the death of an employee receiving benefits under this plan, benefits shall cease.

## WORLD SOCIAL ECONOMIC CONGRESS, AMSTERDAM, 1931

A REPORT on "Social Economic Planning in the Union of Soviet Socialist Republics," being the report from the U.S.S.R. to the World Social Economic Congress which was held last year at Amsterdam, has been issued by the International Industrial Relations Association (This edition is published by the Association in New York). The purposes of this Congress were outlined briefly in the *LABOUR GAZETTE*, April, 1931, page 385. The subjects under consideration were grouped under the following heads:—(1) The present paradox—unemployment in the midst of economic progress; (2) Principles and practice of economic planning; (3) Experience in national economic planning; (4) Necessity and means for international economic planning; (5) Standards of living—the resultant of productive capacity and buying power; (6) Round-table conference on the workshop; and (7) the necessity for world social economic planning—report of committee on findings.

### Social Economic Planning in the U.S.S.R.

The present report is an instalment of the publications issued in connection with the Amsterdam Congress. It is pointed out that this was the first occasion when representatives of the Soviet Union have come out of Russia to give the western world their account of the actual methods of planning as part of the Soviet system. The report of the Russian delegation is composed of four sections, as follows: (1) the Premises, Nature and Forms of Economic Planning, by Mr. Ossinsky, assisted by the staff of the Institute for Economic Research of the Gosplan; (2) Planned Economy in Operation, by Mr. Bonin, with the same assistance; (3) The Planning and Development of Agriculture, by Mr. Gayster; (4) Labour in the Soviet Planned Economy, by Mr. Kraval.

A preface to the report is contributed by Miss Mary van Kleeck, director of Industrial Studies, Russell Sage Foundation, who acted as chairman of the Congress Program Committee. Miss van Kleeck calls attention to two aspects of the Russian Planning system, as described in the report, as being of special

significance: "First it may be said that the Five-Year Plan is not the whole of Russian planning, nor is planning itself the whole of communism. Indeed, communism as envisaged in Russia has not yet taken final form, but rather is in process of becoming an organism developing, as the Russians believe, from historical necessity. In its development, social economic planning is the process of administering socialized production to achieve a given aim. The leading aim or social purpose is determined by the Communist Party and the Government; it is defined in Mr. Ossinsky's report as 'the general aim of constructing a socialist society on the basis of the maximum development of productive forces and the systematic improvement of the material conditions of the workers.' This general aim is then redefined in terms of a leading aim for each period—five years or one year or one month or even five days, according to the unit and period of planning which is being worked out.

"The second point which is important to note is the methodological principle implied in the word 'balance.' The significance of this word in economic life is being given a new content by the development of the technique of planning in Russia. Mr. Ossinsky said: 'the method of balancing, subordinated to the leading aim of the plan, is the fundamental method of social economic planning.' Balance works itself out as between demand and supply of the chief consumption goods, as between factors in production such as grain and fodder, raw materials, fuels, metals, construction materials, equipment and labour and, finally the balance of the unified financial plan."

The report of the Soviet delegation points out that "all the work of planning is so constructed that it combines the concentrated will and aim of the working class organized as a whole with the local initiative of masses of workers in each subordinate economic unit."

Miss van Kleeck states that the aim in publishing this material for American readers is two fold: first, to contribute to a clearer understanding of the new system of a nation

covering one-sixth of the globe, with potentialities of far-reaching importance in the world's commerce; and second, to make these reports available in the United States for those

who wish to be informed of the Russian experience in its bearing upon the problems involved in attaining a balance between production and consumption.

## UNIVERSITY STUDIES ON ECONOMIC PROBLEMS

### Company Plans for Employee Savings and Investment

The preliminary draft of a new Bulletin dealing with Company Plans for Employee Savings and Investment has been issued by the Industrial Relations Section of Princeton University. Pending the provisions of adequate insurance against the distress of unemployment, it is pointed out that "company sponsored savings plans, with or without employer contributions, provide flexible, effective machinery for helping employees to protect themselves against the hardships of unemployment as well as against other hazards of life."

The Bulletin gives samples of the best plans, which are grouped as follows:—(1) Savings plans in co-operation with banks (including the "Worcester Plan" of the Crompton and Knowles Loom Works, and the "ready money plan" of the Western Electric Company, with a discussion of the comparative merits of each plan); (2) Employer-Employee Savings Funds (including the Savings plan of E. I. du Pont de Nemours and Company, the Ford Motor Company's Investment Plan, and the Pennsylvania Railroad Employees' Provident and Loan Association); (3) Long-term Savings funds supplemented by employer contributions (including the employees' savings and investment plan of the General Motors Corporation and the Butler Brothers Employees' Participation Fund. The writer claims that the value of these and other company plans as a service to employees has been demonstrated during the present period of depression.

"Statistics from a few outstanding employee thrift plans," it is stated, "suggest the possibilities for achievement and indicate a genuine improvement in the financial situation of those participating. The credit unions of the New England Telephone Company have handled during the eleven months of the present fiscal year over \$1,500,000 of their members' savings. The annual report of the Hawthorne Club Savings, Building and Loan Association of the Hawthorne Plant of the Western Electric Company for 1930 shows that at the end of the fiscal year, August 31, 72,020 shares of the association were held by members, representing an investment value of

\$7,202,000. The association has outstanding loans on real estate amounting to \$3,100,967.79, money advanced for financing or refinancing the homes of 720 employee members. Through the Ford Investment Plan there have been years in which as many as one-third of the total number of employees had as large a sum as \$25,000,000 in the business. The General Motors Savings and Investment Funds have been in existence twelve years, during which time seven groups of employees have completed their five-year savings periods and have received \$65,955,547 from the funds. Many smaller companies, too, while they could not show impressive totals such as these, could show substantial sums saved by their employees, largely as the result of the company's thrift encouragement."

### The Minnesota Unemployment Research Project

Under this title the Employment Stabilization Research Institute of the University of Minnesota has published the first of a projected series of bulletins on various phases of unemployment. Future bulletins will deal with such questions as the proportion of unemployed who are incapacitated from working; how many may be re-trained; which industries are on the down-grade or up-grade; the relation of age to unemployment; the effects of unemployment on family relations, and in relation to crime. The staffs of the various divisions of the university have undertaken a "concerted attack" on these and similar problems.

The present bulletin advocates the establishment of an experimental employment clinic, this project involving the study of the economic aspects of unemployment, the making of experiments in individual diagnosis and re-training, and the development of public employment agencies. It is hoped that the employment clinic would accomplish the following purposes:—

1. To assist management, through information and guidance, to eliminate needless unemployment.

2. To ascertain methods to alleviate, by sound management and community organization, such unemployment as is unavoidable in the present state of social evolution.

3. To develop techniques to improve the quality of the labour force by removing, as far as possible, physical, personality, and training defects.

4. To devise means to increase the mobility and flexibility of the labour force by vocational guidance and re-training in the light of information made available through a continuous study of occupational shifts in this community.

5. To assist employers, through a system of public employment offices, operated by scien-

tifically trained personnel, to find the properly qualified employees. This involves not merely a study of the aptitudes of the labour personnel, but also thorough-going job analyses of local industries and businesses.

6. To assist the individual worker to discover his own aptitudes and to find the job for which he is fitted.

It is intended by those sponsoring this study that the results will be utilized in the development of policies for the treatment of unemployment problems in the future.

## SOCIAL INSURANCE IN THE PROVINCE OF QUEBEC

### First Report of Commission recommends Provisions for Child Protection and Mothers' Allowance

REFERENCE was made in the last issue (page 3) to the first report of the Commission on Social Insurance, which was presented in the Legislature of the Province of Quebec on January 12. The appointment of this Commission, the terms of its reference, and the names of the Commissioners were given in the LABOUR GAZETTE, November, 1930, page 1236. The present report deals mainly with questions affecting the family and the welfare of children; the mode of adoption and the placing of adopted children; family placements; assistance to large families and to necessitous mothers.

#### Protection of Children

Under this heading the commissioners make the following recommendations:—

1. Revision of the chapters in the statutes relating to industrial schools and apprentice schools to clarify their bearing in general.

2. Formation of a provincial bureau for the protection of children, attached to the department of the Provincial Secretary.

3. Constitution of societies for the protection of children in cities and towns over 25,000 in population. In Montreal four societies are recommended, one for English Protestants, one for French Catholics, one for English-speaking Catholics, and one for Jews.

4. Organization of experimental psychology courses in communities dealing with indigent children, particularly those handling schools of industry or reform schools.

5. Serious inquiry to be made by a sympathetic and competent person before emergence of a child from an orphanage, a reform or industrial school, to determine the conditions into which the child will go on leaving the institution.

6. The superintendent of such institutions always to be consulted on the opportunity for extending or shortening the internment of a child.

7. Institutions complementary to orphanages, industrial schools, etc., such as homes, etc., to be developed in such manner that there will be protection for children leaving them—children for whom no proper family environment is in prospect.

8. All schools and institutions to put recreative facilities at the disposal of children, and that the public authorities be asked to aid in establishment of such facilities.

9. Public assistance authorities or school commissions to aid in multiplication of nurseries and maternal schools by more liberal grants.

10. Institutions to be aided in their effort to develop special classes for handicapped children (mental).

11. Measures to be taken to isolate abnormal children in institutions.

12. The Council of Public Instruction to consider the question of education of children in charitable institutions so as to improve the courses of instruction, and to take the steps necessary so that the school system will assume in whole or in part the cost of educating such children.

13. The name of industrial school, to which has been given the idea of a correctional institution, be changed to children's home.

14. Cost of internment should be one-half by the province and one-half by the municipality except in cases of poor municipalities in which there is appeal to the county council.

15. Age of leaving children's homes to be brought to 16 years.

16. The Government to accord subsidies to institutions to develop and perfect their system of the placing of children.

### Mothers' Allowances

On the question of assistance for needy mothers the Commissioners recommend as follows:—

1. That the Government institute some system of assistance in this connection.

2. Classifications to be aided:—Widows supporting one or more children; wives of insane husbands; wives of husbands unable to work because of incurable and grave illness; women abandoned by their husbands; wives of men in prison; divorced wives (in certain conditions).

3. Conditions of assistance:—British subject by birth, marriage or naturalization; residence in the Province of Quebec at least 5 years; to be of good morals and capable of raising children in good circumstances; proof that she has not the resources to undertake that task; demand upon constituted authorities.

4. Nature and amount of the allocation:—The sums to be left to the bureau in charge, according to circumstances. The Commission is of opinion that where there is complete absence of revenue, the sum of \$40 a month for a mother and two children should be considered.

5. For purposes of administration, a board of three members, one of them a woman;

and the provincial official specially charged with dealing with children should also be included.

6. Expenses to be borne half by the province and half by the municipality; where municipalities are too poor the county councils would assume the obligation of part of the cost.

7. Consideration be given to the presumption that such a law would relieve congestion in a number of orphanages.

### Works of Charity

On the question of works of charity in general, the commission finds as follows:—

1. Works of charity, such as are included in the broad term public assistance are necessary and must be continued.

2. Amendment of the Public Assistance Act for substantial increase in aid to nurseries, maternities and orphanages and that uniform subsidies be accorded on the basis of people aided.

3. Aid for the Bon Pasteur Institutions of Montreal and Quebec and other communities dealing with protection of women and girls; this to allow them to develop their work.

4. Special service to be organized for the common benefit of former inmates of the Bon Pasteur institutions, the Misericorde, etc.

5. In cities such as Montreal and Quebec, there should be formation of a secretariat of social works to concentrate on handling of indigents.

## Provisional Assessment Rates for Workmen's Compensation in New Brunswick, 1932

The Workmen's Compensation Board of New Brunswick, as provided for under the Act, recently published the provisional assessments for 1932, being the estimated amounts necessary to provide sufficient funds in each of the industrial classes to meet all claims for compensation payable during the ensuing year. The provisional rates of assessment for 1932, per \$100 of payroll, show few changes from the rates of 1931 (LABOUR GAZETTE, February, 1931, page 175).

The groups of industries have been reclassified for the purposes of assessment, and where formerly there were seven groups there are now five, these being as follows:—

Class 1. *Mining*. This group is practically the same as before.

Class 2. *Forest Products*. Two of the sub-groups of industries formerly in this class are now in class 3.

Class 3. *Manufacturing and Sale*. This group includes some industries previously in class 2, and a large number which were formerly in class 4.

Class 4. *Construction*. These industries were formerly listed in classes 5, 6, and 7.

Class 5. *Transportation*. This group of industries was previously class 7.

The principal changes among the industrial classification in the rates of assessment levied upon them for 1932, as compared with 1931, are as follows:—

Class 1. *Mining*: Quarrying lime stone; crushing; burning; plaster manufacturing; decreased from \$3.50 to \$3. Quarrying stone, sand, shale, clay or gravel pits; stone dressing. This class of mining is now assessed at \$7. The remaining industries in mining are assessed at the same rate as last year.

Class 2. *Forest Products*: There is no change in the rate for this class in 1932.

**Class 3. *Manufacturing and Sale:*** The changes in the assessment rates in this class are as follows:—

Canning and preparation of fruit, vegetables, fish and foodstuffs including can manufacture connected therewith; packing and preparing fish for market; manufacture of oil from fish; recovery of waste oil; packing houses, including abattoir—decreased from \$1.75 to \$1.50.

Manufacture of tobacco, cigars, cigarettes or tobacco products; spices or condiments; tea or coffee blending—increased from 40 cents to 60 cents.

Hospitals, hotels, theatres, moving picture houses, film exchanges; golf links, janitors, caretakers—increased from 50 cents to 70 cents.

**Class 4. *Construction:*** The following changes are made in the rates of assessment in this group:—

Sewer and water works construction; tunnelling; shaft sinking or well digging; laying

of mains and house connections; trenching less than six feet for gas pipes, water pipes or wire conduits, wood stave pipe installation; maintenance and operation of water works—decreased from \$1.50 to \$1.25.

Construction of dry docks, piers, wharves, breakwaters or other harbour improvements including dredging, subaqueous construction or pile driving—increased from \$3.50 to \$5.

Operation of dry docks, including repair work on vessels; machine shops, fabrication of steel; marine railways—decreased from \$3.75 to \$3.

Telegraph and Telephone Companies, operation, maintenance, extension of lines and making service connection; office and exchange—decreased from \$2 to \$1.25.

**Class 5. *Transportation:*** In this class the rate of assessment for fishing of all kinds shows an increase from \$3 to \$5.

### Railwaymen's Proposals to Alberta Compensation Committee

In the last issue (page 4) it was noted that a beginning had been made in the inquiry by the Special Committee appointed last year by the Alberta Legislature into the Workmen's Compensation Act. The views of the Railwaymen were presented to the Committee on December 31 by representatives of the Brotherhood of Locomotive Firemen and Enginemen, the Brotherhood of Locomotive Engineers, the Order of Railroad Telegraphers, and the Brotherhood of Maintenance of Way Employees. The employees represented by these organizations all come under the Act of 1918, which established an Accident Fund. The Order of Railway Conductors and the Brotherhood of Railroad Trainmen were not represented in the recommendations, these employees having elected to remain under the Act of 1908.

The memorandum recommended a more liberal interpretation of the provision regard-

ing negligence of workmen; increase in the wage basis used in calculating compensation from \$2,000 to \$3,000; increase in the amount of compensation to 75 per cent of average earnings; the minimum compensation for total disability to be \$15 per week; increase in grant for burial expenses to \$150, and in widows' allowance to \$50 a month, with \$15 to each dependent child under 16 years of age; that medical aid be extended to include all surgical, hospital and nursing services; that a representative committee of review be established to deal with contested cases; that compensation payments be continued until the injured workman is able to resume full employment; that the schedule of occupational diseases be extended to include all ailments traceable to employment; and that no deductions be allowed to be made from wages for the purposes of compensation.

### Workmen's Compensation in Quebec

The Workmen's Compensation Commission of Quebec has issued the following regulation, which was approved on January 23, fixing date at which each employer must prepare and transmit to the Commission a statement of the amount of wages which he estimates he will pay during the current year:—

#### REGULATION No. 4

Every employer who carries on an industry subject to the authority of the Workmen's Compensation Act, 1931, (21 Geo. V, Chap. 100)

must prepare and transmit to the office of the Workmen's Compensation Commission, 73, Grande Allée, Quebec, for the 20th of January of each year, on a special form prepared for this purpose and supplied on request, the statement provided for by Article 82 of the aforesaid Act.

If the employer has not filed the statement on or before the date above-mentioned, or if he has not obtained from the Commission an additional delay to file this statement, he will be obliged to pay the entire amount for which he should have been assessed, and in addition

to personal liability to pay compensation for accidents and to the fine imposed by the Act, an addition not exceeding 5 per cent of the assessment due will be levied, plus an additional amount not to exceed 1 per cent of such assessment for each month or fraction of month in default after the 20th of February of each year.

If it is absolutely impossible to file this statement within the stated time, application in writing for an additional delay with all the reasons in support thereof attested under oath, should be made to the Commission so as to reach it on or before January 20th. If this application is not granted, the employer in default will be liable to the penalties hereinabove mentioned.

(Signed) ROBERT TASCHEREAU,  
*President.*

(Signed) SIMON LAPOINTE,  
O. E. SHARPE,  
*Commissioners.*

(Signed) O. G. MOLLEUR,  
*Secretary.*

## New Factory Regulations in Alberta

New regulations under the Factories Act of Alberta, governing the installation and operation of power transmission machinery and equipment, and also governing the construction, operation and maintenance of machinery

and equipment of grain elevators became effective as from November 1, 1931.

Among other requirements it is provided that all revolving shafting, couplings, frictions, clutches, set screws, keys, keyways and similar equipment shall be properly guarded; that all forms of gears used in the transmission of power, or on machinery where exposed to contact, shall be properly guarded; that the bottom part of an engine flywheel shall be at least two inches from the floor; that no machinery shall be cleaned, oiled or greased while in motion; and that all electrical equipment shall be kept free of an excessive accumulation of inflammable dust, where such is liable to collect in sufficient quantities to prevent normal heat radiation.

The regulations also include provisions governing automobile repair shops and garages, these relating to working under automobiles, operating automobiles in buildings, ventilation, paint-spraying machines, the electric hazard, batteries and washing cars with gasoline.

Another section deals with laundry and dry-cleaning machinery, and the final regulations govern the operation of sawmills and wood working machinery.

## NOTES ON INDUSTRIAL SAFETY AND HEALTH

### Methods of Checking Accident Records in Ontario

The Industrial Accident Prevention Associations of Ontario, set up under the authority of Section 114 of the Workmen's Compensation Act of the Province, follow an elaborate system for checking up the accident records of the firms comprised in the various group associations. This system is described by Mr. R. B. Morley, the General Manager of the Associations, as follows:—

"Each week we receive from the Workmen's Compensation Board a group of reports known as accident memos. These are brief stories of the individual accidents that resulted in claims by the injured workers for compensation, and as such claims cannot be made unless the worker was laid off for seven days or more, we assume that all of these reports involve a loss of time of at least seven days. As these accident memos are received they are sorted and posted on the individual card for each plant (we have approximately 8,500 plants in the membership of the Associations). As the clerk makes an entry on the card, it is the practice to total the memos received for the past year and compare these with the average number of employees at the plant as reported by the last inspection. In some cases, approximately 10 per cent frequently

is considered high and calls for special action. In some cases, 5 per cent is too high and calls for an investigation. This investigation is carried out either by correspondence with an executive official of the firm, or by sending a trained inspector to the plant to ascertain the cause of the high frequency.

"This check of accident frequency has been invaluable in a great many ways. It has pointed out those plants where too many accidents occurred; it has shown to us how accidents were happening and has given us specific information regarding the membership of the Associations.

"In addition to these reports by mail, it is the regular practice of the Workmen's Compensation Board to telephone to our office giving details of all death cases. This enables us to make an immediate investigation of these accidents in order to ascertain whether anything might be done in that plant, or in other plants, to prevent a recurrence. . . .

"The average frequency for 1929 was 26.44 and average severity 1.52. In 1930 the average frequency was 14.90 and the average severity 1.33, and in January, 1930, the average frequency stood at 17.78 with the average severity at 1.36. One most interesting feature of this calculation is the fact that the average frequency of accidents has gone steadily down

and the 94 firms that operated for January, 1931, shows the highest figure in the history of the report. As in certain cases it has been impossible to determine any definite number of days lost (as in the case of a lost hand, or a death case), the arbitrary figure set by the International Association of Industrial Accident Boards and Commissions has been used. This, for example, calls for a penalty charge of 6,000 days for a death and the calculation is used in determining severity. The total penalty charges, for example, in January, 1931, amounted to 6,000 days. There were two cases of one finger lost involving 600 days altogether, one case of two fingers resulting in 750 days, one case of one finger 1,200 days, one case of thumb and two fingers 1,500 and one case of two and three fingers, 1,950 days.

"The frequency index is obtained by multiplying the number of reported accidents by one million and dividing by hours of exposure. The severity index is obtained by multiplying the number of days lost (including penalty charges for death and permanent disability) by one thousand and dividing by hours of exposure. Frequency and severity form a fair, universally applicable system whereby industry can keep in touch with the accident situation. Frequency may be said to be a measure of the physical hazard revealed; hazards which an employer should be able to eliminate by safeguarding, education and supervision. Severity may be said to be a measure of economic wastage and is, of course, in itself often an 'accident'."

### Illness of Radium Miners

How to protect miners excavating for radium is the problem now exercising the competent authorities in Czechoslovakia.

Radium miners in the pitchblend mines at Jachymov (Joachimsthal) suffer from a strange illness caused by radioactive emanations in the atmosphere.

A special committee, composed of medical and radiological experts, has been nominated to investigate the health problems involved. President Dr. T. G. Masaryk has offered the sum of \$9,000 for this purpose.

There are about 400 miners employed in the Jachymov mines. Their average life is rather short, as before reaching normal old age they are carried off for the most part by an illness which so far has not been thoroughly studied. In more than 50 per cent of cases the mortality is due to a baffling type of cancer of the lungs known also as "miners' tuberculosis."

### Accidents to Minors in U.S.A.

The last annual report of the Children's Bureau of the United States Department of Labour contains a chapter on industrial accidents to minors. The Bureau is at present engaged in the preparation of a study of workmen's compensation laws as affecting minors. At the present time, it is stated, only about one-third of the States compile separate information as to accidents to employed minors. These seventeen states, according to the 1920 census, employed three-fourths of the minors both under 16 and under 18 years of age who were reported at work in non-agricultural occupations in the United States. According to figures compiled for 1930 or for the nearest 12-month period available, 12 per cent of the total number of employees reported as injured were minors under 21, and nearly 2½ per cent were minors under 18. The percentages under 18 in the different States varied from 2 to 7. All but 4 of the 17 States reported some accidents to children under 14.

Accidents to minors under 18 occurred most often in manufacturing and mechanical industries, the proportion being highest in the 16 and 17 year old group. In the 9 States for which information is available 66 per cent of the accidents to boys and girls in that age group occurred in manufacturing or mechanical industries as compared with 63 per cent of accidents to persons of all ages and 53 per cent of the accidents to minors under 16. The most important single causes of injury to these young workers were machinery and vehicles, machinery particularly to the 16 and 17 year old minors and vehicles to those under 16.

A bill to authorize the City of Montreal to borrow five million dollars for the construction of lighting conduits was adopted by the Quebec Legislature in December. The bill was amended by the Legislative Assembly, on the motion of Mr. Irenée Vautrin, representing Montreal-St. James, by the insertion of a clause requiring the payment of "Fair Wages" in connection with the proposed work. The Legislative Council, however, deleted the Fair Wage Clause, and on the return of the bill to the lower House, the Premier stated that the measure was urgently needed to provide employment, and that its passage would be unduly delayed by the controversy that would arise if the clause were again inserted. The Bill was therefore passed without provision for the payment of current rates of wages.

## LEGISLATIVE PROGRAM SUBMITTED TO DOMINION GOVERNMENT BY TRADES AND LABOUR CONGRESS

ON Tuesday morning, January 26, the executive council of the Trades and Labour Congress of Canada, consisting of Tom Moore (president), Percy Bengough, Robt. Tallon and James Simpson (vice-presidents), and P. M. Draper (secretary-treasurer), accompanied by a strong delegation of international trade union officials, presented the legislative program of the congress to Prime Minister, Right Hon. R. B. Bennett, and the following members of the cabinet:—Hon. H. Guthrie, Minister of Justice; Hon. E. B. Ryckman, Minister of National Revenue; Hon. W. A. Gordon, Minister of Immigration and Colonization and Mines and Acting Minister of Labour; Hon. E. N. Rhodes, Minister of Fisheries; Hon. H. A. Stewart, Minister of Public Works; Hon. R. J. Manion, Minister of Railways and Canals; Hon. A. Sauvé, Postmaster-General; Hon. H. H. Stevens, Minister of Trade and Commerce, and Hon. A. Duranleau, Minister of Marine.

In presenting the program Mr. Moore said: "These representations are made on behalf of the 175,000 organized workers affiliated to the Trades and Labour Congress of Canada, organized in more than 1,600 branches of national and international unions located within the Dominion and representative of workers engaged in practically every skilled and unskilled, manual and non-manual occupation. Because of this we feel justified in submitting them as truly reflecting the views of Canadian workers.

"The widespread misery and want existing as a result of unemployment and long continued under-employment makes it essential that first consideration should be given by the Government to measures which would directly or even indirectly alleviate these conditions. In respect to this matter a pamphlet containing the policies of the Congress on employment, unemployment and under-employment, along with a number of remedial measures proposed by Labour, is attached and made part of this presentation, and we respectfully urge that the many suggestions made therein will receive your most careful and sympathetic attention.

"Before dealing further with this question, we wish to refer as briefly as possible to a number of other matters, each of which are important in their respective spheres. Most of these have been covered in greater detail in previous memoranda submitted and, therefore, the brevity of the reference on this

occasion should not be taken as signifying any less desire on our part to secure favourable action thereon. Nevertheless we should be pleased, if thought desirable, to have the opportunity of discussing further any of these subjects with the Ministers or administrative heads of the Departments concerned."

### B.N.A. Act Amendment

On the question of amendments to the British North America Act, the executive suggested that the Government should initiate steps which would enable a review of the British North America Act to be undertaken and amendments secured to bring the same into harmony with present day conditions and requirements.

### Vocational Education

On the subject of Technical Education the executive expressed pleasure that the promise made last year to give effect to requests for Federal support for technical education had been fulfilled and legislation enacted during the last session of Parliament authorizing payments to Provincial authorities up to \$750,000 per annum for the next fifteen years. In view of instances coming to the attention of the congress that the activities of vocational and technical schools are threatened with curtailment because of difficulty in financing the same, it was hoped the Government would be able to arrange to make substantial grants as authorized by the Vocational Education Act of last session.

### The Tariff

The section of the memorial on "Tariff Matters" was read by Mr. P. M. Draper as follows:

Organized labour holds the opinion that tariff protection is a form of national subsidy and therefore industries benefitting thereby should be subject to control, particularly in respect to giving preference of employment to residents of Canada, the observance of reasonable hours of labour, payment of wages sufficient to maintain the prevailing standard of living, etc., the prevention of watering of stock and the charging of unreasonable prices to the consumer. Protection granted should be high enough to warrant these conditions being enforced and yet enable efficiently managed industries to successfully compete in the home market.

It is our considered opinion that it would lead to greater harmony between employer and employee if the Industrial Disputes Investigation Act was made operative in all tariff protected industries.

We believe that the enactment of the legislation providing for an independent tariff board

is in the public interest, and because of the vital concern to the workers, both as producers and consumers, in tariff matters we would urge that in the establishment of this board, consideration be given to including thereon a representative of Labour, chosen in agreement with the Trades and Labour Congress of Canada.

### Immigration and Colonization

Mr. Moore dealt with "Colonization, Land Settlement and Migration," as follows:

As one means of conserving available jobs for Canadian workmen we ask for a continuation of the strictest enforcement of the contract labour regulations and the Alien Labour Act. Whilst the latter needs amendment before it can properly give the full protection aimed at in the legislation we would urge that pending such changes the responsibility for administration of the Act should be vested in one of the Ministers of the Crown.

Note has been taken of increased activity by provincial and municipal authorities in endeavouring to place Canadians on unoccupied farm lands and we would again ask that through the Federal Department of Colonization every possible assistance should be given by the Federal Government to develop such work.

We reiterate our belief that there is need for the establishment of an Advisory Board to the Immigration and Colonization Department and that such should include in its membership not only a representative of each Provincial Government but also that industry, labour and agriculture should be represented thereon.

We again desire to direct attention to the fact that though "immigration" statistics have been published for many years, as yet no similar statistics in regard to "emigration" are issued. We would therefore ask that the recommendations adopted by the conference of the International Labour Office in 1922 requesting that these be made available for comparative international statistics should be complied with.

### Canada Shipping Act

On the subject of "Marine and Shipping Matters" it was stated that as, by the enactment by the British Parliament of the Statute of Westminster, the Canadian Parliament now has the authority, it was urged that the Canada Shipping Act be revised during the forthcoming session of Parliament, the National Association of Marine Engineers of Canada to be given opportunity to advise on suggested changes.

### Criminal Code

Request for Criminal Code Amendments was dealt with in the following section:

Since the enactment of Section 98 of the Criminal Code at the special session of Parliament in 1919 repeated efforts have been made to secure the repeal of this harsh clause and restore the provision which prevailed in the Act prior to that date.

On eight different occasions the House of Commons has approved legislation of this character, but the Senate rejecting the same, it has failed to become law. Whilst we consider it unnecessary, yet in view of statements advanced as to why Section 98 is retained in the Act, we desire to reaffirm in the strongest possible terms that our requests are not based on any desire to weaken the power of the Government to maintain law and order, and also to point out that the provisions of the Criminal Code, prior to 1919, were sufficient to enable this to be effectively done.

The present section, we believe, is too wide in its application and unduly restricts the exercise of reasonable freedom of speech.

We desire also to reiterate our request of the past several years for re-insertion in the Criminal Code of the clause defining and legalizing peaceful picketing. The need for such action is constantly apparent as demonstrated by the many conflicting judgments rendered by the Courts in picketing cases which make it impossible for law abiding citizens to know with any degree of certainty when they may be unwittingly committing an unlawful act.

### Nationalization

Mr. James Simpson read the section on "Public Ownership of Public Utilities" as follows:—

At the forty-seventh convention of the Congress, held in Vancouver September last, resolutions were adopted reaffirming confidence in the principle of public ownership and democratic management of all public utilities. Given fair opportunity, it has been shown that these can be operated efficiently and with considerable public advantage in Canada and we therefore desire to place on record this expression of opinion and would urge the Government to strongly discontinue any action which would tend towards abandonment or curtailment of any such services now operated by or on behalf of the Government or that would reduce in any degree the support of the Government necessary for their effective operation.

The parliamentary inquiry into the affairs of the Beauharnois Power Company disclosed that a very unsatisfactory condition existed in respect to the promotion of this undertaking and we believe it would be in the public interest that a royal commission be appointed to make the fullest inquiry into the whole subject and that any person found to have illegally benefited therefrom should be prosecuted, and further that the Beauharnois power project should be developed as a public ownership undertaking.

We reiterate our proposals of last year that radio broadcasting in Canada should be developed in the national interests rather than along the lines of an advertising medium and that legislation should be enacted as recommended by the Aird report for the creation of a nationally owned and operated broadcasting system.

### Banking and Credit

On "Banking and Credit System," Mr. Simpson read as follows:—

Believing that the banking and credit system, controlling as it does the economic destiny of practically the entire community, is in its nature and manner of functioning actually a public

utility, and that the private banking system, as now constituted, though custodian of the people's money and savings, is not directly responsible to them for its actions, but works primarily for profit and dividends for shareholders, often with very little consideration for the general public welfare. Therefore, the Trades and Labour Congress of Canada supports the principle of nationalization of the banking system.

### Miscellaneous Requests

Mr. Moore in again taking up the program asked (1) That the Federal Government encourage at all times the development of co-operative trading in Canada and facilitate interprovincial trading by co-operative societies, (2) pointed to "the inadequacy of pay to letter carriers," and asked that full power be given to the Postmaster-General to deal with salaries and conditions of employment of letter carriers without undue restriction by the Civil Service Commission, (3) urged that all motor vehicles carrying on business as public carriers either as individual units or as motor transportation companies, be licensed and under the control of the Board of Railway Commissioners of Canada, or a new authority set up for that purpose, with a view to standardizing all rates on a fair and equitable basis, and enforcing the observance of such hours of labour (not more than eight in the day) as will ensure safety to the travelling public; (4) endorsing the establishment of county health units throughout Canada and asking the Government to give effect to the resolution approving Federal grants for this purpose adopted at the 1930 session of Parliament and reaffirmed during last year's session; (5) reaffirming request for pensions for the blind and offered the suggestion that the Dominion Department of Health establish a small committee on which bona fide organizations of the blind should be given representation, for the purpose of studying and making of recommendations on such matters as might lead to the prevention of blindness or otherwise advance the interests of dependent blind persons; (6) urging that legislative action be taken to give effect to such conventions and recommendations of the International Labour Organization (League of Nations) as come within the jurisdiction of the Federal Government, and further that provincial governments be encouraged to participate in measures to enable conventions coming within their jurisdiction to be ratified by Canada as a whole; (7) asking that the Bankruptcy Act be amended so as to give priority of wage claims in case of bankruptcy procedure over other creditors.

### Old Age Pensions

Mr. Percy Bengough presented the passage on "Old Age Pensions" as follows:—

The Government is to be commended for the amendment made to the Old Age Pension Act at the last session of Parliament providing for the federal contribution to be increased from fifty to seventy-five per cent. This is a step towards the desires of labour that the payment of these pensions should become wholly a federal responsibility and made applicable to all aged needy workers in Canada irrespective of the province in which they may reside. It is sincerely hoped that further amendment will be made to give effect to this proposal.

The preamble to this measure which was later withdrawn expressing the belief that it is desirable that old age pensions be established on a contributory basis expresses an opinion to which organized labour has always been opposed. We are of the opinion, however, that a greater margin of private income should be allowed before deductions from pensions become operative as the aggregate of income and pension of \$360 per year is not sufficient to enable those to live comfortably who by their own care and thrift have endeavoured to provide for security in their old age either by the purchase of government annuities or through their membership in labour or fraternal organizations, and we therefore ask that this section of the Act should be amended.

The difficulty of aged workers securing new employment or even maintaining that in which they are engaged emphasizes the necessity for further amendment to the Act to make these pensions payable at the age of 65 instead of 70 years, and we believe that fifteen years' residence in the country should be sufficient qualification instead of the twenty years now demanded in the Act.

Another measure sought is the repeal of that section of the Act which demands five years' residence in the province where the application for the pension is made, as under this section needy aged workers, born in this country, and who otherwise would be fully qualified for pension, are debarred from receiving the same.

Mr. Moore then took up the program, commending the Government for amendments made to the Election Act during the last session of Parliament enabling members of the House of Commons to be promoted to cabinet positions without the necessity of seeking reelection, following which request was made that the Election Act be amended so as to provide for a half-day holiday with pay on election day and also to make provision which would enable seamen, necessarily away from home on election day, to exercise their franchise.

Appreciation and thanks were extended on behalf of affiliated organizations for exempting trade union journals from the magazine tax imposed by Parliament at its last session.

A request was made that provisions of the Customs Tariff Act, in regard to the marking of the country of origin on all imports where the same could be done without damage, be extended to imports of boots and shoes.

A request was also made that all money grants for cadet or other military training in schools be abolished and grants for non-military physical training be substituted therefor.

### Fair Wages

Mr. R. J. Tallon presented the section on "Fair Wages" as follows:—

While the Dominion Fair Wages Act gives considerable protection to workers employed on certain classes of government jobs, experience has shown that amendments to this Act are necessary to prevent abuses and violations by contractors in the performance of works financed wholly or in part by government moneys. The following requests are advanced with this end in view:—

That the provisions of the Act be made applicable to all undertakings financed wholly or in part by Dominion Government funds and to companies and commissions operated by or on behalf of the Government.

That contractors violating provisions of the Act be subject to prosecution and penalty and upon conviction be debarred from working or tendering on any future contracts of the Government.

That Clause 2, of Section 3 of the Act be repealed as it has the effect of nullifying the purpose of the Act in respect to large parts of work done in connection with government contracts.

That regulations to give effect to the matters enumerated in sub-sections of Section 5 of the Act be drafted and made effective as provided in Clause 2 of the same section.

It is suggested that to avoid abuses the wages of employees should be paid in cash each week by a representative of the department letting the contract, the total amount of such wages to be deducted from the moneys due the contractor; also that in addition to inspection by fair wage officers of the Department of Labour, clerks of works or other government inspectors employed on the job should carry out the duties laid down in Section 5 of the Fair Wages Policy of the Government and report any violation of the conditions of labour as provided in the contract or by the Fair Wages Act in 1930.

We would further ask that all water-borne contracts for the Government of Canada should be made with Canadian registered ships, manned by Canadian personnel, and paying the rates of wages recognized in Canada for the respective classes of the crew.

### Hours of Labour

Mr. Tallon also read the following section in "Hours of Labour":—

For the past ten years requests have been submitted seeking compliance by Canada with the Eight Hour Day Convention of the I.L.O. Based on a ruling of the Supreme Court of Canada, delivered June 11, 1925, this matter has been held to be one generally within the jurisdiction of the Provincial Governments, but in our opinion this should not be taken as liberating the Federal authorities from the obligation of seeking to secure consent of the provinces to enable Canada to ratify this international convention.

Action was taken by the Federal Government, within the limits laid down in the Supreme Court judgment, to give effect to the eight-hour day convention by the issuing of Order in Council P.C. 670, dated March 27, 1930, fixing hours of labour for its own employees, and by the eight-hour day clause in the Fair Wage Act. A similar clause was also inserted in the regulations issued for the administration of unemployment relief funds.

The application to its own employees is made contingent, however, upon subsequent Orders in Council being issued by each department of Government supplementing the general Order in Council above referred to respecting observance of the eight-hour day and attention is again directed to the fact that up to the present time no such Order in Council has been issued covering guards and other employees of penitentiaries, many of whom are still called upon to work under the two-shift system of from twelve to thirteen hours. We would therefore respectfully urge that steps be taken to put the eight-hour work day in effect for all employees of the Government, including the ones herein especially referred to.

There is also great need for revision of legislation ostensibly meant to prevent the employment of workers for seven days in the week. The provision of the present Lord's Day Act is totally inadequate to ensure the observance of one day's rest in seven and we would again ask that the necessary amendments be made to this measure, or preferably new legislation enacted, providing for one day's rest in seven to all workpeople.

Further reference to these two matters as they affect opportunities for employment is dealt with under the subsequent chapter of this presentation dealing with that subject.

### Disarmament and War Debts

Mr. Moore presented the remaining sections of the program as follows:—

It has been noted with pleasure that the Government of Canada will participate in the disarmament conference called by the League of Nations to be held in Geneva, February, 1932.

Labour believes that progress in the direction of general reduction of armaments can only be permanently secured if the system of disarmament agreed upon is based on equality of rights and duties as between nations, and we wish to give the assurance that the whole force and influence which Labour can command is at the service of the Government to bring about international arbitration, international justice and pacific settlement of international disputes.

In our opinion the movement towards disarmament and international peace would be facilitated greatly if countries could be relieved of the enormous burden of war debts, as by this means money could be made available to alleviate conditions which to quote the words of the Treaty of Peace involve "such injustice, hardship and privation to large numbers of people as to produce unrest so great that the peace and harmony of the world are imperilled."

We therefore respectfully urge the Dominion Government to co-operate in any measure which will bring about cancellation of war debts or failing this to secure the maximum reduction of interest on the same.

### Health Insurance

Several Provincial Governments are now giving detailed study to the question of health insurance. We consider this to be a matter which should be uniformly applied throughout the Dominion, and we would therefore ask the Federal Government to take such action as may be possible to co-ordinate Provincial activities and ensure a nation-wide system of health insurance being inaugurated.

### Unemployment

The serious extent to which unemployment and under-employment continue to exist in Canada and throughout the world demands, we believe, the co-operative efforts of all groups of citizens to bring about an alleviation of the distress caused by this social disease and, as far as may be possible, remove the causes of the same. It is in this spirit and with a keen desire to constructively contribute towards a solution of the unemployment problem that our proposals are advanced.

These are comprehensively dealt with in the attached pamphlet on "Employment, Unemployment and Under-employment." The first chapter of this historically reviews some of the activities of the Trades and Labour Congress of Canada in respect to unemployment, etc., while other chapters are devoted to a survey of present conditions including the extent and causes of unemployment, Labour's remedial policies with reference to reductions of hours of labour, wages policy, limitations of active employment periods, protection of unfit workers, preservation of opportunities for work, stabilization of employment, research and gathering of statistical information, control over industry, unemployment insurance, temporary relief, investigations, inquiries and reports and concluding with a number of recommendations and a summary of the present program based on the convention decisions of the Congress. These broadly refer to:

The need for the providing of work by public authorities during trade depression so as to avoid the necessity of workers being compelled to accept direct relief, either from public funds or private charities.

Measures to bring about greater opportunity for employment and more equal distribution of available jobs by: Progressive reduction of hours of labour; stabilization of employment within industry and gradual raising of real wages so as to increase purchasing power.

Extension of opportunity for employment through land settlement, co-ordination of seasonal occupation, extension of activities of the Employment Service and free employment bureaus, etc.

Removal of part of the burden of unemployment from the individual to the community by the establishment of a national system of unemployment insurance based on contributions from employers, employees and the State.

Establishment of an expert body competent to gather facts and publish authentic information in respect to economic changes taking place in industry as they effect employment.

Labour also attaches importance to a large number of other social and economic measures which, we believe, indirectly assist in coping with the unemployment situation and, therefore, should be advanced as rapidly as possible.

Reference has already been made in previous sections of this presentation to a number of these, including ratification of the conventions and adoption of the recommendations of the International Labour Organization, Old Age Pensions and Pensions for the Blind, Health and Sickness Insurance, Technical Education, Tariff Matters, Nationalization of Banking and Government Control of Credits, Reduction of Hours of Labour, Fair Wages Policy, Disarmament, Cancellation of War Debts, etc.

Without elaborating on the reasons for our proposals which are, however, outlined in the attached pamphlet, we deem it advisable to add a few words in respect to several of the above items.

There has been noticeable, throughout Canada, during the past several months, a determination on the part of employers to take advantage of the present conditions to reduce wages, notwithstanding there is ample proof that such a policy only results in decreased purchasing power and further aggravation of the unemployment situation.

We believe that by a liberal administration of the Fair Wages Act the Government could assist materially to offset this by maintaining wage rates on works undertaken or assisted by the Government, even though employers may in some districts have succeeded, temporarily, in reducing wages below what would be considered in ordinary times as "fair and reasonable."

The existing fair wages policy up to the time of enactment of the Fair Wages and 8 Hours' Act had been based on the existing conditions in respect to hours of labour which often resulted in unreasonable long work days. We believe that present conditions warrant a policy of still further reduction of hours in order to give a larger number of workers opportunity for employment. We would therefore urge the Government both in respect to contracts coming within the scope of the fair wage policy and its own works, to, wherever practical, put into effect the six hour day and five day week and by this means give a lead to private industry in a matter that cannot help but reflect itself in a reduction of the number unemployed workers. In doing this, however, due consideration should be given to the payment of wages high enough to maintain established standards of living, as otherwise no real relief would result.

Wage reductions have not been accompanied by any reduction in interest rates on loans, but on the contrary there has been a tendency to pay higher interest rates presumably to ensure the successful flotation of Government bonds. This again we believe leads to a decrease in the amount of money available for purchases and a reduction consequently of a demand for goods on the part of the masses.

The declarations of Ministers of the Crown that no person in Canada should go hungry or without shelter because of inability to secure employment is one with which labour is in perfect agreement, though we cannot equally agree with all the measures taken to give effect to the same or their adequacy to cope affectively with the existing situation.

The efforts of the Minister of Labour in endeavouring to carry out this government policy are fully appreciated and we desire to express our regret at his absence at this time, caused, we understand, by a break-down of his health under the pressure of the onerous duties of his office and trust that he may soon be once more

fit to resume his functions as Minister of Labour.

Last year we had occasion to commend the Government for the assistance which was being rendered the provincial and municipal authorities to enable work to be provided and direct relief granted and we are again pleased to record our appreciation of the fact that by authority granted during last session of Parliament, this co-operative assistance has been continued. We do regret though that the same provisions demanding the maintenance of the payment of fair and reasonable wages on all works where financial aid has been given, as contained in the regulations issued under the Fair Wages Act of 1930, were not again made part of the agreement between the Government and the Provinces.

Great disappointment is felt that notwithstanding the successful flotation of the National Service Loan, many useful public undertakings have not been proceeded with, but on contrary there has been an apparent desire on the part of the Government to encourage the payment of direct relief instead of providing useful work for the unemployed. We sincerely trust that the Government may yet find it possible to change this, and not only continue to give generous support to the provinces and municipalities, but also open up Federal works in sufficient volume to take care of, at least, a large majority of those who at present find themselves without employment.

We desire to direct attention to the necessity for the establishment of a moratorium to protect unemployed workers against loss of their homes and other investments because of their inability, through unemployment or long continued under-employment, to meet their obligations. While this may be a matter mostly within the competence of provincial legislatures, we respectfully ask that if the Federal Government has power to take any action in the matter, either under the special legislation of last session of Parliament or by amendment of the Bankruptcy Act or any other measure, that such action be taken.

### Taxation

Labour is not unmindful that many of the proposals submitted entail the expenditure of additional money by the Federal Government. As far as possible this should be raised by taxation and thus avoid the heavy burden which interest payments mean to the tax payer each year. Recognizing this, no protest was raised against the re-imposition of the sales tax, though Labour had for a number of years urged the abolition of this tax, and following its progressive reduction had looked forward to its total abolition.

It is with keen disappointment, therefore, that the withdrawal of amendments to the Income Tax Act at the last session of Parliament was noted.

Without extending the imposition of the Income Tax to those small salary workers and wage earners who are now exempt through amendments made during the past few years, we feel that the wealthy citizens can be justifiably called upon to pay a much greater proportion towards meeting the obligations of this country than the Act presently provides. For this reason we urge that increases in the in-

come tax should be made, graded so that the largest percentage be paid by those who possess the greatest wealth.

### Prime Minister's Reply

The Prime Minister thanked the delegation for their sympathetic attitude towards the difficult problems now confronting the Dominion. He viewed the situation hopefully as far as Canada was concerned, but world factors, he said, made recovery from the present depression less certain, and a country with a population of ten million people could influence only to a slight degree the solution of world problems. Opinion in Canada was always favourable, for example, to disarmament, but Canada itself had nothing to disarm beyond a fairly adequate police force. Mr. Bennett pointed out, however, that while there were arms and armed men there would always be conflict, and he therefore advocated the abolition of conscription as a necessary step towards disarmament.

Coming to the requests submitted by the delegation the Prime Minister asked for a recognition of fundamental principles, one of which was that expenditure must be limited by the capacity of the country to bear taxation. Canada as a borrowing country should, he pointed out, be selling more than it bought, and in this connection the Prime Minister explained the use of the tariff as an instrument for correcting the adverse balance of trade; he announced further that during the past year the tariff had so operated as to change an adverse into a favourable balance. At the same time conditions in Canada were such that he was obliged to state frankly that for the present year at least, the government could not possibly undertake many of the measures that had been submitted in the memorandum. The railway problem, for example, called for an expenditure of a million dollars a week, and the credit of the country was at stake for meeting these and other obligations. However, the delegation might bear this in mind, that the most careful consideration that was possible would be given to the requests. Next year, he hoped they might meet again under more favourable conditions.

### Members of Delegation

The delegation supporting the executive council of the Trades and Labour Congress consisted of the following international union representatives: A. Bastien, Canadian representative, American Federation of Labour; W. G. Powesland, Brotherhood of Blacksmiths; Jos. Pelletier, Brotherhood of Bookbinders; J. Gavin, Brewery, Flour, Cereal and Soft Drink Workers; B. J. Hiscock, Bridge, Struc-

tural and Ornamental Iron Workers; Thos. Broad and Jos. Corbett, Brotherhood Railway Carmen; C. Macintosh, Elevator Constructors; Wm. C. Golby, Photo Engravers' Union; D. H. Rehder and J. J. Reaves, Federated Association Letter Carriers; Jas. Somerville and Richard Riley, Association of Machinists; W. V. Turnbull, A. McAndrew, J. J. O'Grady and W. Jewkes (C.P.R. System Federation), Maintenance of Way Employees; A. Bell and A. J. Crawford, Association of Sheet Metal Workers; Fred Molineaux and C. R. Gervais, Painters and Decorators; A. D'Aoust, Brotherhood of Papermakers; J. W. Bruce, Plumbers and Steamfitters; Magnus Sinclair, Street and Electric Railway Employees; W. P. Covert, The-

atrical Stage Employees; J. L. Smith, Journeymen Stonecutters; D. Guigue, Railroad Signalmen; Chas. Dickie, Division No. 4, Railway Employees' Department, A.F. of L.; Geo. Sangster, Journeymen Tailors' Union; J. McIntyre, American Federation of Musicians; Humphrey Mitchell, M.P., Steam and Operating Engineers; Pat Green, United Brotherhood Carpenters; L. Pichette, Association Fire Fighters; J. J. Trainor, Order Railroad Telegraphers, and J. A. Bell and W. M. Dean (C.P.R. eastern lines) and Geo. Gilbert (C.P.R. western lines), J. H. Dixon (C.N. Rys. eastern lines), Order Railroad Telegraphers; W. R. Rogers, C.N.R. System Shop Trades Federation.

## RECENT LABOUR UNION ACTIVITIES

### Alberta Federation of Labour

The sixteenth annual convention of the Alberta Federation of Labour was held at Drumheller, January 13-16, 1932, with sixty-two accredited delegates and five fraternal delegates present. Mr. Fred. White, M.L.A., president of the Federation, presided at the meeting. Mayor A. P. Hanley, Drumheller, welcomed the delegates, and spoke on the mutual benefits to be derived from such meetings through the interchange of ideas.

The joint report of the President and Secretary dealt with the many activities of the Federation during the past year, and reviewed the efforts put forth to cope with the unemployment situation, which, according to the officers, was considered as being the outstanding social and economic problem facing the people of Alberta.

#### Unemployment

In addition to re-stating the Federation's stand on this question, taken at the last convention, (LABOUR GAZETTE, February, 1931, page 176), the following recommendations were made: (1) That the Government might conduct a survey of unemployment conditions affecting women and girls, and institute such measures as found necessary to cope adequately with the situation; (2) The establishment of recreation tents in camps where workmen are employed in bush cutting, and that these workers be supplied board at cost; (3) That the Government should not restrict its program of construction and maintenance of public buildings, highways, etc.

Reference was also made in the report to the memorandum setting forth the views of the Federation on unemployment, which was

placed before Premier Bennett and Premier Brownlee, who with members of the Provincial Government and representatives of the municipalities of Alberta held a conference at Calgary recently to discuss plans to cope with the unemployment situation. This part of the report with recommendations was adopted by the convention on recommendation of the Committee on Officer's Reports.

#### Workmen's Compensation

Another subject which was discussed at considerable length in the report, was the Workmen's Compensation Act. At the last session of the Legislature a committee was appointed to consider and recommend changes in the Act (LABOUR GAZETTE, April, 1931, page 339). On January 5, 1932, the secretary of the Federation appeared before this committee and presented a memorandum containing requests for changes in sixteen clauses. The memorandum showed that the Federation was strongly opposed to decisions of the Board being appealed to the courts, for the reasons, first, that the finding of the court would be final and prevent a further reviewing of such claim, and secondly, on account of the delay that would arise in the settlement of claims for compensation. The report of the committee of the Federation on the Workmen's Compensation Act, which fully endorsed all the changes as recommended by the executive, was adopted by the convention.

Other subjects referred to in the report were; Coal Mines Regulations Act; Mechanics' Lien Act; Trade School Regulation Act; Railway investigation; Conventions; Membership; and Finance.

The treasurer's report showed total receipts, including balance from last year, amounting to \$2,713.32, disbursements of \$1,693.38, leaving a balance as at December 31, 1931, of \$1,019.94.

### Resolutions

Resolutions were adopted as follows:—

That the provincial government take immediate steps to stimulate an adequate building construction program;

That the provincial and federal governments provide a more adequate scale of relief for miners and their families;

Removal of police officers from relief inquiry offices;

That all relief work be carried out by the Government under fair wage conditions;

Holding of an inquiry into the operation of certain employment offices in Calgary;

A more suitable location for the Government employment bureau in Calgary;

That miners be paid weekly and in cash; That the miners' examination board be instructed to cease work for one year;

That the Alberta Government inaugurate a six-hour day and a five-day week;

That the midnight shift in mines be abolished;

That overtime be abolished;

Enactment of legislation providing for one day off in seven for all firemen in Alberta;

That the Provincial Government provide, in the curriculum of High Schools, for the study of economics as it relates to present day conditions;

That fire insurance companies be taxed for the purpose of creating and maintaining a firemen's pension fund;

A clear right of way for fire apparatus;

Legislation to give all paid fire departments in the province an eight-hour day;

Advocating control by the government of trucks and cars operating on provincial highways and urging that bus and truck drivers be not allowed to drive for a period exceeding eight hours in any consecutive twenty-four hours;

A campaign to increase the circulation of the *Alberta Labour News*;

That sickness arising out of abnormal working conditions be made compensable, and that health insurance be established;

An eight-hour working day for hospital nurses;

Normalization of newcomers as soon as they have completed the necessary residence period;

That all school supplies and books be furnished free in the public and high schools of Alberta;

That an old age pension of thirty dollars a month be paid to persons at the age of sixty-five years and that the residential period be ten years;

That the federal and provincial governments enter upon a more comprehensive public ownership program, which would include banking, the various phases of insurance, sale of gasoline, development and sale of electrical power, the leasing of land rather than the sale of same, etc.;

A national housing scheme;

A moratorium to protect individuals against seizure, foreclosure, or similar proceedings;

That the Government provide home-owners with work in order that they may be able to pay tax arrears;

A publicly-issued notice setting forth the legal holidays;

Repeal of Section 98 of the Criminal Code;

Amendment of Minimum Wage Board order No. 3, so that girls working in hotels, restaurants, etc., be allowed one day's rest in seven, when relief is possible;

Free hearings by courts in cases other than indictable offences;

A legally recognized apprenticeship system for the province;

Enactment of legislation to expedite the collection of wages legally earned;

Appointment of scaffold inspectors;

Closer co-operation between the farmer and city workers;

That two projectionists be required on all shifts in all theatres;

A ten dollar per day fee for jurors;

Compulsory arbitration in all disputes between policemen and their employers;

Appointment of inspectors capable of passing on plumbing installation;

That the Federal Government provide the entire cost of old age pensions;

Opposing the curtailment of any of the educational services to the children of the province

Appointment of a Federal Royal Commission, on which there would be a representative of labour, to investigate the coal mining industry in the province.

In the election of officers, Fred. J. White, M.L.A., Calgary, was re-elected president, and Elmer E. Roper, Edmonton, re-elected secretary.

## New Brunswick Federation of Labour

Approximately thirty-five delegates were in attendance at the nineteenth annual convention of the New Brunswick Federation of Labour, which was held at Chatham, N.B., January 5-7, 1932, with President E. R. Steeves presiding. Mayor Murray of Chatham and Mr. F. M. Tweedie, M.L.A., Northumberland County, extended a welcome to the delegates.

At various sessions of the convention addresses were delivered by Messrs. T. W. Martin, eastern representative of the Federal Department of Labour; A. E. Bastien, organizer for the American Federation of Labour; James Broderick, representative of the International Brotherhood of Electrical Workers; George Murphy, representative of the International Association of Machinists; Tom Moore, president of the Trades and Labour Congress of Canada; and Hon. Dr. H. I. Taylor, Minister of Health and Labour. In the course of his address, Dr. Taylor informed the delegates it was unlikely that the government would put into effect, at the present time, legislation covering Old Age Pensions or Mothers' Allowances, but intimated that the Minimum Wage Act for Women and the Children's Protection Act would be proclaimed soon. The Minister also referred to the appointment of two commissions, one on Workmen's Compensation, and the other on Education. Assurance was given that a Labour representative would be appointed on the Workmen's Compensation Board in the near future.

The Officers' reports showed that the Federation was progressing, reporting an increase in the number of organizations affiliated and a substantial balance in the funds.

The delegates decided to return to the former practice of holding conventions in Fredericton during the sessions of the Legislature, the selection of the date of the next convention being left to the executive board.

### Resolutions

Resolutions were adopted making the following recommendations:—

Legislation to give municipalities authority to expropriate privately-owned electric plants serving the public at exorbitant rates;

Amendments to the Workmen's Compensation Act to cover sprain and strain cases;

Proclamation giving effect to the Electrical Energy Act, the Old Age Pensions Act, the Mothers' Allowance Act, the Minimum Wage for Women Act and the Children's Protection Act;

Uniform ballot for all elections;

That the federal and provincial governments continue their grants to vocational schools;

Appointment of a boiler inspector;

Enactment of legislation governing motor bus and truck transportation;

Continued public ownership of the Canadian National Railways.

The recommendation of a special committee on unemployment, that the executive board draft a resolution requesting the holding of a Dominion-Provincial conference on the matter of unemployment, was adopted by the delegates.

The chief officers were re-elected—President, E. R. Steeves, 53 Bromley Ave., Moncton; Secretary, G. R. Melvin, 37 High St., Saint John.

## Legislative Program to be Presented to the Nova Scotia Legislature

The report of the legislative committee of the Halifax District Trades and Labour Council was presented to the members at the January meeting, and with some amendments, the whole program was adopted. The committee was instructed to act in conjunction with the Nova Scotia executive of the Trades and Labour Congress of Canada in presenting this program to the Provincial Legislature at the beginning of the session. The requests to be submitted are as follows:

Increase of rates of compensation under the Workmen's Compensation Act, and increase in the maximum amount of earnings upon which compensation is based from \$1,200 to \$2,000;

That the Old Age Pension Act be put into operation at once;

Appointment of additional factory inspectors, one of the inspectors to be a woman;

That a fair wage clause be inserted in all government contracts, and that provision be made for an eight-hour day;

Better sanitary and working conditions in offices and stores;

Amendments to the Motor Vehicles Act providing for the appointment of a permanent board of examiners for chauffeurs and operators' licences, and that the eyesight, as well as physical and mental condition of applicants be considered before licences are granted;

Establishment of a provincial Department of Labour;

That organized labour be represented on all commissions or public bodies which deal with matters affecting the workers;

Enactment of legislation to provide improved housing conditions for the working class;

That the practise, of having married women employed in government offices when their husbands are able to support them, be discontinued;

More stringent regulations in connection with railway crossings to ensure public safety;

Amendment of the Game Laws to permit the carrying of a gun in the woods on Sunday;

That the Cinematograph Act be revised so as to make it the same as that of Ontario and other provinces.

### **Legislative Program of British Columbia Executive of Trades and Labour Congress Presented to Provincial Government**

The British Columbia Executive of the Trades and Labour Congress of Canada, composed of Messrs. Colin McDonald, (Chairman), Vancouver; S. D. MacDonald, Prince Rupert; R. W. Nunn, Victoria; and E. H. Morrison, Vancouver, accompanied by representatives of local international trade unions, waited upon the provincial Government on December 30, and presented a program of legislative requests.

A strong protest was made by the delegation against the example set by the Government in reducing the salaries of its employees, emphasizing that the lowering of wages could only result in reducing the purchasing power of wage earners, and thereby further accentuate unemployment. A further protest was registered against the levy of one per cent on wages of married workers receiving in excess of \$25 per week, and \$15 in the case of all other persons.

The requests presented were as follows:—

That industry accept full responsibility for assessment necessary to take care of casualties among its employees.

Amendment of the Hours of Work Act to provide for a five-day week, and that there be no exemptions.

Adequate wage rates on road construction and other work undertaken by the Government as relief measures.

That financial assistance for direct relief be administered by the elected representatives of the people.

Co-operation in any move to establish a national unemployment insurance plan for Canada.

Enactment of fair wages legislation similar to the Federal Act of 1930.

Enactment of the following amendments to the Workmen's Compensation Act; (a) That the rate be increased to seventy-five per cent, based on wages at time of injury, and that a minimum of \$4 per day be allowed when computing the amount of compensation; (b) That when temporary total disability compensation is awarded, the same be continued until the workman can resume his former occupation or has been offered other suitable and equally remunerative employment; (c) When an injured workman is able to undertake light work after suffering permanent partial disability, that total disability compensation be continued until suitable employment has been provided; (d) That the scope of the Act be extended so as to bring it into harmony with the Alberta Act.

Amendment of the Income Tax Act to provide for the exemption of persons receiving less than \$3,000 per annum.

Enactment of health insurance legislation.

### **Legislative Program Submitted to Dominion Government by the Railway Brotherhoods**

A memorandum of proposed legislation was submitted to the Dominion Government on January 26 by a delegation representing the railway brotherhoods. The brotherhoods were represented by Messrs. A. H. Nethery, Order of Railway Conductors; T. J. Coughlin, Brotherhood of Railroad Trainmen; Byron Baker, Brotherhood of Locomotive Engineers, and William L. Best, Brotherhood of Locomotive Firemen and Enginemen. The government

was represented by the Prime Minister, the Right Hon. R. B. Bennett, and other cabinet ministers. The Prime Minister promised that consideration would be given to the proposals submitted, and announced that certain amendments to the Railway Act were under consideration.

The memorandum is as follows:—

1. British North America Act.—Amend the British North America Act to restrict the

powers of the Senate to veto any bill passed by the House of Commons more than twice. This proposal is in harmony with the present practice of the Parliament of Great Britain.

2. Amendments to the Railway Act.—(a) Amend section 179 by adding the following words shown in italics:—

"179. The Company shall not, at any time, make any change, alteration or deviation in the railway, or any portion thereof, until the provisions of the last preceding section are fully complied with, nor remove, close or abandon any station or divisional point, nor create a new divisional point, *nor make any change in the Routing of Traffic* which would involve the removal of employees, without leave of the Board; and where any such change is made the Company shall compensate its employees as the Board deems proper for any financial loss caused to them by change of residence necessitated thereby. *No such change shall be made or authorized without three months' notice of the intended change to the employees concerned.*"

The proposed change in Section 179 is for the purpose of extending the jurisdiction of the Board of Railway Commissioners for Canada to cover a situation such as has recently occurred at Big Valley, Alberta, where, by the diversion of traffic to another line, Big Valley was abandoned as a divisional point, thus causing a very heavy property loss to the railway employees who were obliged to follow the traffic and establish homes at other points. The Judgment of the Chief Commissioner, dated November 27, 1931, held "that the Canadian National Railways have not 'abandoned' Big Valley in the literal sense of that word" and, therefore, concluded that the claim of the employees for compensation under Section 179 had not been made out. We contend, however, that the heavy financial loss sustained by the employees justifies the enactment of legislation that will prevent the recurrence of losses to railway employees from a similar cause.

(b) Amend Section 250 by adding the following subsection 6:—

"6. Whenever the doing of any work incidental to changes in overhead structures affects the safety of the public or the employees of the Railway, no change shall be made in the standards fixed by subsections one and three of this section and no approval thereof shall be given without hearing or written submission on notice to all parties interested."

Notwithstanding the necessary safety standards fixed by Section 250 of the Act, the Board

may exempt from the operation of that section certain structures and may reduce or otherwise vary those standards without reference to the parties most interested, namely, the railway employees whose safety is involved. We contend that before any change is made in the standards fixed by the Act, due notice should be given the accredited representatives of the employees concerned.

3. *Government Control of Radio Broadcasting.*—We respectfully request the favourable consideration of the principle of Federal Government Control of all Canadian Radio Broadcasting, as recommended in the Report of the Royal Commission on Radio Broadcasting, 1929.

4. *Unemployment Situation in Canada.*—We recognize that the unemployment situation prevailing throughout Canada constitutes one of the greatest problems of our time. This situation seems to point to some maladjustment of our economic machinery which is periodically thrown out of gear, resulting in thousands of our citizens being thrown out of employment with consequent distress through no fault of their own. In the absence of figures showing the total number of persons at present out of employment in Canada, it is sufficient for our purpose to observe that there were 34,111 fewer employees on Canadian Railways in October 1931 than October 1930; 4,573 less in October 1930 than in October, 1929; 16,029 less in October 1929 than in October 1928; or a total decrease of 54,713 employees from October 1928 to October 1931. In fact, during the past year there was a decrease in the number of employees of 20.4 per cent, and the purchasing power of railway employees during the same period decreased by 22.6 per cent.

We take this opportunity of complimenting your Government for the measures taken to provide unemployment relief work. Whilst fully appreciating the value of the relief measures taken, however, it is now generally recognized that such methods for the relief of unemployment are in their nature but temporary expedients and, therefore, a more effective solution of the problem must be found. It was with this thought in mind that the Joint Legislative Committee of the Railway Brotherhoods presented to your Government during the last Session of Parliament the attached Resolution and covering letter. This, it may be remembered, was also presented to you in September 1930 and discussed some weeks afterwards with the Minister of Labour.

With a view to discovering a sound basis from which to proceed in effecting adequate measures to ensure the regularization of employment, we again urge upon the Federal Government the vital importance of undertaking, without unnecessary delay, a scientific investigation into the human factor in industry and the apportionment of the wealth invested in and produced by industry. Whilst it is somewhat difficult to discern any considerable sunshine through the gloom of depression, especially to such a large number of our citizens over whom hangs the nightmare of unemployment, it is some encouragement to realize that there are more persons giving thought and study to this national and world problem than ever before.

Whatever our conclusions may be, or however far-reaching our individual opinions may suggest, prevailing conditions have forced us to one inevitable conclusion, namely, that the result of science and invention in machinery as a substitute for man power is one of the outstanding and primary factors contributing to prevailing human want. It seems to be the considered opinion of a large number of our representative citizens that science must now be applied through more specific fact-finding channels, having definitely in view the relation of the human factor in industry to that of the capital investment and machinery employed in order to obtain a true estimate of their respective values to the community and the nation. In other words, there must be a

revaluation of human personality and a clearer realization that the nation's human happiness must have an economic basis. When these facts are discovered and exposed to the clear light of public scrutiny, something of a sound basis may be found from which to proceed in effecting a remedy for the industrial and economic ills which so vitally affect such a large portion of the human family.

**5. Unemployment Relief Measures.**—Considerable public thought has been given and numerous enlightening articles have been published with respect to temporary and permanent measures for unemployment relief. These have included the suggestion, from several sources, of the enactment of unemployment insurance. Without urging such a proposed measure, we respectfully suggest that in any system of unemployment insurance proposed for this country, due consideration should be given to the appropriate share to be borne by industry and the state. If the interest on capital expenditures for unused power and rolling stock of the railway, or of unused plant or equipment in any industry, due to depression or falling off of business, constitutes a legitimate overhead charge against the consumer, it seems to logically follow that unemployed workers due to the same cause should have a legitimate claim upon a larger share from industry in any scheme to provide out-of-work benefits. This suggestion, whilst having very far-reaching implications, is worthy of serious consideration.

### Legislative Program Submitted to Ontario Provincial Government by Railway Brotherhoods

The following program of legislation was proposed by a delegation from the Railway Brotherhoods which waited on the Ontario Government at Toronto on December 16. The delegation was composed of Messrs. T. J. Coughlin and A. J. Kelly of the Brotherhood of Railroad Trainmen; A. H. Nethery, of the Order of Railway Conductors; J. T. Wilson, of the Brotherhood of Locomotive Engineers; and William L. Best and H. B. Crawford, of the Brotherhood of Locomotive Firemen and Enginemen. The program was as follows:—

**1. Industrial Disputes Legislation.**—That the consent of the Government be expressed by legislation to provide that all industries, otherwise within provincial jurisdiction, be brought under the application of the Federal Industrial Disputes Investigation Act.

**2. Resolution to Amend British North America Act.**—That the Ontario Government introduce and have passed at the first Session of the Legislature a resolution favouring an amendment to the British North America Act that will restrict the powers of the Senate to

veto a bill passed by the House of Commons more than twice. The reasons why this seems desirable are obvious. Moreover, the proposal is in harmony with the present practice of the Parliament of Great Britain.

**3. Protection at Highway Crossings.**—We again urge upon the Government the importance of prompt action being taken by Provincial and Municipal authorities with a view to eliminating all highway crossings with the railway at rail level, where practicable and that pending the complete removal of such crossings by placing them over or under the railway, adequate protection be provided by warning signals or an effective stop law for motors and other vehicles.

With a view to preventing an unnecessary increase in the number of highways crossing the railway at level within the Province, we strongly urge the adoption of a policy in the construction of new highways that will ensure their complete separation from the railways (either by means of subways or overhead bridges), and that in the improvement of all existing highways a similar policy be adopted and maintained, where practicable.

4. *Highway Traffic Act.*—That measures be taken to provide (1) uniform traffic regulations with all provinces in Canada; (2) that all operators of motor vehicles be required to pass a qualifying examination as to visual acuity, colour perception and hearing and (3) that it be made a punishable offence for drivers of any vehicles using the highway to ignore or disregard the warning signals for the protection of traffic at highway crossings with the railways at level.

5. *Regulation of Motor Vehicle Competition.*—Because of the very keen and unfair competition with the steam railways by various forms of motor vehicles using the highway for revenue purposes, with little or no regulation respecting tariffs, equitable taxation and liability to the public, we respectfully urge: (a) That all busses and trucks operating within the Province be placed under the control, administration and supervision of the Ontario Railway and Municipal Board or a similar Commission, requiring operation under conditions similar to those imposed upon the railways, especially with regard to the fixing of rates and tariff charges and the elimination of destructive competition; (b) That all commercial vehicles using the highway for revenue purposes be taxed on a basis commensurate with the use they make of the highways, having due regard also to the cost of maintenance and future construction; (c) That owners be required to furnish guarantee of sufficient financial responsibility to assure the payment of any claims for damages which may be legally assessed against them; (d) That no bus or truck be permitted to operate on the highway for revenue purposes where adequate transportation facilities already exist or where the steam railways can and are willing to provide these facilities.

We heartily endorse the principles contained in the Memorandum presented to your Government on November 19 last by a Committee representing the Affiliated Railway Organization of Ontario. The steam railways must continue as the proper dependable means of transporting the commerce of the country and the

travelling public under the most adverse conditions. Therefore, it is respectfully submitted that no Government should continue to permit the use of public highways, constructed and maintained at the expense of the tax-payers—including the railways—as a means of competing with the steam railways, without providing that those who find it profitable to use this subsidized means of transportation for revenue purposes shall return to the Government a larger share towards the cost of maintenance.

6. *Mothers' Allowance Act—Chapter 280, R.S. 1927.*—Amend Section 2, subsection 1 as follows: (a) Strike out the word "five" in the sixth line of paragraph (a) and substitute the word "two"; (b) Strike out the word "two" in the fourth line of paragraph (b) and substitute the word "one"; (c) Strike out the word "two" in the first line of paragraph (g) and substitute the word "one"; (d) Strike out the second line of paragraph (b) of subsection (2) the word "two" and substitute the word "one".

7. *Government Control of Canadian Radio Broadcasting.*—That the approval of the Ontario Government be given to the principle of Government Control of all Canadian Radio Broadcasting, as recommended in the Report of the Royal Commission on Radio Broadcasting, 1929.

8. *Workmen's Compensation Act.*—Since our submission to the Government in January last, representations regarding this subject were made on behalf of Labour to the Royal Commission, appointed to inquire into the Workmen's Compensation Act. We are informed that the Report of the Commission has been delayed owing to the illness of the Commissioner, Mr. Justice Middleton, which we very much regret. We hope, however, that the Report and Recommendations of the Commission will be made shortly and opportunity afforded for perusal. In any event, we are looking forward to the Government's favourable consideration of our suggested improvements to the Workmen's Compensation Act at the next Session of the Legislature.

### Memorandum on Proposed Traffic Regulation Submitted to the Alberta Government by the Railway Brotherhoods

A memorandum referring to Highways Traffic and Motor Vehicle Regulations was presented to the Government of Alberta on January 7, on behalf of the Railway Brotherhoods. The memorandum was signed by Messrs. Wm. L. Best and Geo. W. Yeats, Brotherhood of Locomotive Firemen and Enginemen; D. Cameron, Brotherhood of Locomotive Engineers; J. McLaughlin, Brotherhood of Railroad Trainmen; P. J. Morgan, Order of Railway Telegraphers; A. McLeod, Order of Railway Conductors; and A. McAndrew, Brotherhood of Maintenance of Way Employees.

The memorandum was as follows:—

1. *Highway Crossing Protection.*—We desire to express our appreciation to the Government for the progress made in highway crossing protection by the elimination of many dangerous level crossings. We feel sure that this progressive policy will be continued to the full extent of the Government's financial ability.

Sections 2 and 3, dealing with "Highway Traffic," and "Regulation of Motor Vehicle Competition," are identical with sections 4 and 5 of the proposed Ontario program on this page.

### United Mine Workers of America

The thirty-second consecutive convention of the United Mine Workers of America was opened at Indianapolis, Ind., January 26, 1932, with 1,100 delegates present, representing

every coal producing field within the jurisdiction. Addresses of welcome were given by Reginald H. Sullivan, Mayor of Indianapolis, Ind.; Thomas N. Taylor, Terre Haute, Ind.,

president, Indiana State Federation of Labour; William Holmes, Indianapolis, president, Indianapolis Central Labour Union. President John L. Lewis who presided replied to the addresses of welcome.

A feature of the opening session was an address by William Green, President of the American Federation of Labour. In the course of his address President Green outlined the measures supported by the Federation, which include: (1) A movement against any sales tax on necessities, but a luxury tax on automobiles; (2) A fight against the injunction in labour disputes; (3) The six-hour day and the five-day week; (4) The Davis-Kelly bill for coal stabilization; (5) The appointment of liberal judges to the United States Federal courts.

The joint report of the president, vice-president and secretary-treasurer, the first of its kind to be presented to a United Mine

Workers' convention, was printed in pamphlet form and consisted of ninety-three pages. Every phase of the coal mining industry was discussed, and in addition to giving a history of events affecting coal miners up to the present time, gave the views of the International officers on vital economic issues now confronting the American people. After the various subjects in the report had been taken up seriatim and discussed at considerable length, the delegates adopted the report in full.

According to the auditors' report, which was approved, total revenue, including balance carried forward, amounted to \$1,629,550.11, expenditures totalled \$1,065,991.04, leaving a balance on hand, as at December 1, 1931, of \$563,559.07.

No further report of the proceedings had been received at the time of going to press.

## STEAM RAILWAY OPERATION IN CANADA IN 1930

STATISTICS of the steam railways of Canada for the year ended December 31, 1930, have been published recently by the Transportation and Public Utilities Branch of the Dominion Bureau of Statistics. The report states that the industrial depression affected the revenues of the railways in 1930 just as forcibly as those of other industries, but the railways were not able to curtail expenses quickly and extensively and, consequently, their net operating revenues showed a much greater rate of decrease than their gross revenues. Gross revenues amounted to \$454,231,650 which was a decrease from 1929 of \$79,874,395, or 15 per cent, and from 1928 of \$109,500,610, or 19.4 per cent. Operating expenses were reduced from \$433,077,113 in 1929 to \$380,723,411 and the net operating revenues amounted to \$73,508,239. This was a decrease from 1929 net revenues of \$27,520,694, or 27 per cent, and from 1928 net revenues of \$47,522,751, or 39 per cent. After paying taxes, all rental, interest and other income charges, the net corporate income of all Canadian railways showed a debit of \$27,640,229, as against credits in 1929 of \$3,975,146 and in 1928 of \$25,430,848.

The number of employees each month averaged 174,485, which was a decrease from the 1929 average of 13,361. The pay roll amounted to \$268,347,374, including \$251,540,129 chargeable to operating expenses and \$16,807,245 chargeable to capital account. This was a total decrease of \$22,385,126 including a decrease in the operating expense pay roll of \$9,363,202 and

in the construction pay roll of \$13,021,924. The average pay per day for all employees on daily and monthly rates showed an increase from \$5.786 per day in 1929 to \$5.863 in 1930, the only classes to show a decrease being the telephone and switchboard operators, inspectors and sergeants of police, hostlers, express department and radio department employees. For all employees on hourly rates the average was 59.5 cents as against 58.1 cents in 1929. There were four classes with a decrease of a tenth of a cent per hour and six classes with decreases from three-tenths to nineteen-tenths of a cent per hour, the largest decrease being for floating equipment employees where the average rates were 38.6 cents in 1929 and 36.7 cents in 1930.

*Railway accidents.*—Train accidents in 1930 were responsible for the death of 15 passengers while 488 were injured, representing a decrease of 5 killed, but an increase of 82 injured. During the same period there were 81 employees killed in train accidents, as compared with 104 in 1929 while there were 1,477 employees injured, indicating a decrease of 551. There was also a decrease in the total number of persons injured in non-train accidents from 10,699 in 1929 to 8,371, but the number of persons killed in this class of railway accident increased from 19 in 1929 to 38, including 14 trackmen and 15 other persons. Accidents at highway crossings which are included in train accidents were responsible for 113 persons killed including 94 motorists, 13 pedestrians, 1 trainman and 5 persons riding vehicles other

than automobiles. This was a decrease of 15 in the total, made up of 6 pedestrians, 8 motorists and one riding in other vehicle. The number of persons injured at highway crossings was 414 which was a decrease from 1929 of 42. There were 366 motorists injured, or 38 less than in the previous year, and 15 pedestrians, or 10 less than in 1929. Of the 94 motorists killed, 11 were killed in accidents at crossings

protected by gates, and 19 at crossings protected by electric bells. At unprotected crossings 64 motorists were killed, 3 at urban crossings and 61 at rural crossings. This was a decrease at unprotected crossings of 19 killed but an increase at protected crossings of 11. Motorists injured at protected crossings also showed an increase of 11 and a decrease at unprotected crossings of 49.

## LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

### Sixteenth Session of the International Labour Conference

The date of the opening of the Sixteenth Session of the International Labour Conference has been fixed for April 12, 1932. The agenda of the Conference consists of the following items:—

1. Abolition of fee-charging employment agencies (first discussion);
2. Invalidity, old-age and widows' and orphans' insurance (first discussion);
3. Age of admission of children to employment in non-industrial occupations (second discussion); and
4. Revision in part of the Convention concerning the protection against accidents of workers employed in loading or unloading ships adopted at the Twelfth Session of the Conference.

This last item was added to the agenda by the Governing Body at its Fifty-sixth Session in the month of January past.

### The 1933 Session of the International Labour Conference

The following two subjects have been inscribed on the agenda of the 1933 Session of the International Labour Conference: (1) Unemployment insurance and various forms of relief for the unemployed; and (2) Methods of providing rest and alternation of shifts in automatic glass works. In all probability the two following subjects, which are inscribed for first consideration on the agenda of the 1932 Session, will come up for final decision, namely; old-age, invalidity and widows' and orphans' insurance; and the abolition of fee-charging employment agencies.

### Fifty-Sixth Meeting of the Governing Body

The Governing Body of the International Labour Office held its fifty-sixth meeting at Geneva from January 13 to 16, 1932.

*Committees on Women's Work.*—It was decided to set up a committee consisting of experts who may be consulted by the International Labour Office in connection with studies into problems relative to women's work. The experts will be chosen at a later Session.

*Enquiries into Conditions of Work in the Textile Industry.*—It was decided that a revised questionnaire on the subject of conditions of work in the textile industry should be sent by the International Labour Office to the governments concerned, requesting them, when forwarding any suggestions they may wish to make, to estimate the approximate number of workers in each of the sections of the textile industry included in the enquiry, and the approximate number of workers employed in the establishments in each section from which they expect to be able to receive the data required. The governments will be invited to indicate, taking into account the present state of the textile industry, the period for holding the enquiry which will give the most satisfactory results.

*Conditions of Work in the Iron and Steel Industry.*—The Governing Body approved of the principle of an enquiry by the International Labour Office into conditions of work in the iron and steel industry. It was decided that a committee should be appointed at the April session of the Governing Body to supervise this investigation.

*Freedom of Association.*—The Governing Body decided to set up a committee of three members, one each from the Government, employers' and workers' groups, to consider the problems to which the study of the question of freedom of association may give rise.

*Technical Education.*—The Governing Body discussed the relations between the International Labour Office and the International Organization for Technical Education, which is now being set up. It adopted a resolution expressing its great sympathy with the de-

velopment of technical education and laid stress on the interest with which it regards the constitution of the new international organization. In view, however, of the fact that that organization is still in process of being set up, it considers it premature to decide at present the exact form to be taken by the possible collaboration between this new organization and the International Labour Office, but the Governing Body instructed its officers to continue to keep in touch with the provisional bureau of the International Office for Technical Education on the lines suggested by the Director of the International Labour Office, and to report to it on the further development of the question.

*International Enquiry into the Cost of Living in Various Centres.*—The Governing Body also considered the conditions of publication of the results of the enquiry undertaken by the International Labour Office at the request of the Ford Motor Company on the comparison of the cost of living of workers' families in an American town,

Detroit, with that in 14 European towns. The English edition of the report has recently been published. It was decided that before publishing it in French, and possibly in German, the results of the enquiry should be submitted to the Committee on Wages and Cost of Living. In addition, the International Labour Office will, in an article in the *International Labour Review*, define the extent to which it is permissible to draw conclusions from the statistical information obtained.

*Dockers Convention.*—At its previous session in 1931, the Governing Body had decided to consider the revision in part of the Convention concerning the protection against accidents of workers engaged in loading or unloading ships. A number of amendments to this Convention were suggested by various governments, all of them dealing with technical points which did not affect the main principles of the Convention. The Governing Body has now decided that the revision of the Convention in respect of these various points should be considered at the 1932 Session of the Conference.

### A Vocational Guidance Program

The current issue of the *Monthly Labour Review* (Washington) outlines the recommendations of the Vocational Guidance Committee appointed by the White House Conference on Child Health and Protection, the various committees of this Conference having been engaged since 1930 in researches into various aspects of child welfare. The committee suggests that a modern vocational guidance program should include (1) Careful study of the individual, through mental and other tests, and adequate records; (2) An advisory service, staffed by qualified vocational advisers; (3) A curriculum provision in which vocational and educational guidance is emphasized; (4) Adequate opportunities for vocational training, including try-out courses; (5) Publication and distribution of suitable occupational and educational pamphlets; (6) Placement machinery for obtaining positions and supervising employment for young workers; (7) Scholarships and similar aids for retaining boys and girls in school; (8) Co-operation with other agencies in vocational guidance.

Association submitted a number of recommendations to the Provincial Government in January, to the effect that legislative provision should be made for the standardization of all municipal bylaws dealing with the licensing of electrical contractors and journeymen and for uniformity of examinations for electricians' licences. This legislation, it was stated, was desired in order to protect the industry and the public against incompetent contractors, who could not be controlled under the existing laws. Fourteen cities in the province came under the present licensing system, but the city licensing regulations were not uniform, and a contractor who held a license in one city might not be qualified to work in another. It was suggested therefore that the provincial government should take over the licensing system, and place it under the control of the Ontario Hydro-Electric Commission, who would make uniform requirements for electricians working in all municipalities in the province. The delegation stated further that last year there were 1,000 fires caused by defective wiring, with resulting losses totalling over a million dollars.

The Hon. George S. Henry, Premier of Ontario, agreed that there should be uniformity and standardization as suggested by the deputation, and undertook that full consideration would be given by the government to their proposals.

### Uniform Electricians' Licensing Regulations proposed for Ontario

A deputation composed of about 200 members of the Ontario Electrical Contractors'

# REPORT OF THE EMPLOYMENT SERVICE OF CANADA FOR THE PERIOD OCTOBER TO DECEMBER, 1931

THE work of the offices of the Employment Service of Canada during the quarter October to December, 1931, was somewhat greater in volume than during the corresponding quarter of 1930, as there was shown an

increase of nearly 11 per cent both in vacancies offered and in placements effected. An analysis of the different industries showed that gains were registered in both instances in construction and maintenance, farming and

communication, but these increases were greatly modified by losses under both comparisons in all remaining groups. Provincially, Saskatchewan alone showed a decline in transactions recorded, the larger portion of which occurred in the logging industry of that province. All other provinces registered gains in vacancies and in placements. The accom-

panying table gives the vacancies and placements of the Employment Service of Canada by industrial groups in the various provinces during the period October to December, 1931.

From the chart on page 208, which accompanies the article on the work of the Employment Service for the month of December, it will be seen that the curve, both of va-

cancies and placements, in relation to applications followed an upward trend during the first half of October, but from the middle of that month until the end of November followed a downward course. Through December, however, the curves once more showed an upward tendency, although they did not attain the levels reached at the close of December, 1930. During the period October to December, 1931, there was a ratio of 65.3 vacancies and 63.9 placements for each 100 applications for employment, as compared with 59.1, vacancies and 57.6 placements during the corresponding period of 1930.

The average number of positions offered daily during the quarter under review was 1,791, of applications registered 2,741, and of placements effected 1,752; in contrast with a daily average of 1,617 vacancies, 2,741 applications and 1,579 placements in regular and casual employment during the last quarter of 1930.

During the three months October to December, 1931, the office reported that they had

made 139,553 references of persons to positions and had effected a total of 134,862 placements, of which 60,182 were in regular employment and 74,680 in casual work. Of the placements in regular employment 50,907 were of men and 9,275 of women, while casual work was found for 64,964 men and 9,716 women. Comparison with the same period in 1930 showed that 121,529 placements were then made, of which 42,275 were in regular employment and 79,254 in casual work. Applications for employment during the period under review were received from 177,994 men and 33,059 women, a total of 211,053 in contrast with a registration of 211,029 persons during the same period of 1930. Employers notified the Service during October to December, 1930, of 137,881 vacancies, of which 116,793 were for men and 21,088 for women, as compared with 124,437 opportunities for work during the corresponding period of 1930.

A report in detail of the transactions of the Employment Service for the month of December, 1931, will be found on page 207.

## UNEMPLOYMENT IN CANADA AS REPORTED BY TRADE UNIONS FOR THE YEAR 1931

**S**TATEMENTS are compiled each month by the Department of Labour from returns received from trade union locals, showing their members and the number of members without work on the last day of each month, and these data provide an index of unemployment among the organized workers of the country. Locals reporting each month during 1931 averaged 1,840 with a monthly average of 199,034 members, of whom 16.8 per cent on an average were unemployed.

There was unusual depression throughout the country during the year 1931, the effect of which was felt in the majority of trades and industries. The building trades, however, were most adversely affected, there being over 37 per cent of the members reported unemployed each month throughout the year. Employment conditions among pulp and paper workers were somewhat better at the close of the year than at the end of 1930, but were less favourable during the earlier months. Transportation was quiet with more workers unemployed each month than during the corresponding month of 1930. Shutdowns in the railway car shops which occurred during September had quite an adverse effect upon the situation in the manufacturing industries as a whole, but as these shops were re-opened in the middle of November some improvement resulted, not, however, to a sufficient extent to offset increased unemployment among textile and garment

workers, large numbers of whom were unemployed at the close of the year. Workers in the manufacturing industries as a whole reported more unemployment during the year than in 1930. Employment in lumbering and logging fell off considerably during the year, but showed a slight improvement in December. Mining and trade reported less work available.

During January, 1931, a slight improvement was reported over the previous month, and this favourable trend continued until April when the best conditions for the year prevailed, there being at the end of that month 14.9 per cent unemployed. The May situation was less favourable than in April, largely due to quietness in the garment trades in Quebec, and this condition continued throughout June and July. In August, however, conditions improved, but in September the adverse trend was again in evidence and continued to the close of the year. At the end of December 21.1 per cent of the membership involved was reported idle. This was the highest percentage in any month during the year and also since the collection of reports was first undertaken.

The Rockefeller Foundation has accorded to the Government of the province of Quebec, \$9,000 for a service of epidemiology and for inspection of County Health Units.

## EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN DECEMBER, 1931

THE following information as to the employment situation in Canada is based upon reports from four sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting on January 1 was 7,832, the employees on their payrolls numbering 835,960 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for December was 1,874, having an aggregate

membership of 188,553 persons. It should be understood that the report on the number of unemployed workers refers only to organized labour, definite figures not being available as to the number of unorganized workers who were without employment during the period reviewed.

(3) The Department of Labour receives reports from the 68 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 61 cities throughout Canada, showing the value of permits granted during the period for various classes of building construction.

### (1) Employment Situation at the Beginning of January, 1932, as reported by Employers

Employment at the beginning of January showed a pronounced decline, which rather exceeded that noted on January 1, 1931, but approximated the average loss indicated at the opening of the preceding ten years. The Dominion Bureau of Statistics tabulated returns from 7,832 firms, whose payrolls declined from 904,492 persons on December 1 to 835,960 at the beginning of January, a decrease of 68,532 persons, or 7·6 per cent. Reflecting this contraction, the index (based upon the 1926 average employment as 100) stood at 91·6 on January 1, 1932, as compared with 99·1 in the preceding month, and with 101·7, 111·2, 109·1, 100·7, 95·9, 90·7, 84·9, 89·8, 87·3, 78·8 and 88·8 on the same date in 1931, 1930, 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively. Employment as reported by employers was thus at a lower level than on January 1 in the years 1927-1931, but the index was higher than in the preceding six years of the record.

As is usually the case at the beginning of January, the greatest losses on the date under review occurred in manufacturing, construction and transportation, but there were also important reductions in logging, mining and communications; trade, in which the tendency on January 1 has very frequently been downward, showed practically no general change as compared with December 1. Since the decreases, especially in manufacturing, were in many cases due to a temporary stoppage of work over the holiday season, and for in-

ventory and plant repairs, it is likely that a partial recovery from these contractions will be shown in the next report.

#### Employment by Economic Areas

All provinces recorded reduced activity; as is customary at the time of year, establishments in Quebec and Ontario laid off the greatest number of workers.

*Maritime Provinces.*—There was a decrease in employment in the Maritime Provinces on January 1; this occurred chiefly in manufacturing and construction, but logging and trade were also slacker. On the other hand, transportation showed seasonal improvement with the opening of the winter ports. State-ments were received from 575 firms employing 76,480 persons, compared with 77,647 at the beginning of December. Gains had been noted on January 1, 1931, but the index was then several points higher.

*Quebec.*—The reduction in Quebec was rather greater than on the same date last year, when the general situation was more favourable. Manufacturing (notably in iron and steel, rubber, pulp and paper, textile, food, lumber and building material plants), construction and transportation reported especially pronounced losses, but the tendency was also downward in logging and mining, while improvement took place in retail trade. In many cases, operations will have been resumed early in the New Year in the establishments

closed down over the holiday season. The labour forces of the 1,833 co-operating employers aggregated 231,268 workers, as against 253,820 on December 1, 1931.

*Ontario.*—Manufacturing showed the greatest curtailment in Ontario, that in iron and steel, food, textile and lumber factories being most noteworthy, although there were also important losses in the non-ferrous metal, clay, glass and stone, pulp and paper, leather, electrical appliance and other groups. In the non-manufacturing industries, there were large contractions in transportation and construction, and smaller declines in logging, mining and communications. Retail trade, on the

884 workers, or 16,162 less than on December 1. Construction reported especially marked losses, but manufacturing and transportation also showed important curtailment; in addition, mining, communications, services and wholesale trade were slacker, while logging registered seasonal improvement.

*British Columbia.*—The recessions in British Columbia were more extensive than those indicated on January 1 last year, and the index was lower. The 762 firms furnishing data reported 65,177 employees, as against 73,329 in the preceding month. Lumber, electric current, vegetable food and non-ferrous metal factories, logging and construction

#### EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

other hand, recorded slightly increased activity. A combined payroll of 350,151 persons was employed by the 3,529 firms whose returns were received and who had 370,650 on their staffs on December 1. These contractions were much smaller than those indicated in January 1, 1931, but the index was then higher.

*Prairie Provinces.*—Declines on a rather larger scale than at the beginning of January, 1931, were noted in the Prairie Provinces, where employment was not so active as at the commencement of last year. Statistics were tabulated from 1,133 employers of 112,-

recorded curtailment, that in the last named being most pronounced. On the other hand, transportation and mining showed slight improvement.

Index numbers of employment by economic areas are given in Table I.

#### Employment by Cities

There were contractions in seven of the eight cities for which separate tabulations are made, firms in Montreal, Quebec, Toronto, Ottawa, Hamilton, Winnipeg and Vancouver reporting reduced employment, while heightened activity was indicated in Windsor and

the adjacent Border Cities as a result of work undertaken for the relief of unemployment.

*Montreal.*—The decrease in Montreal involved a larger number of workers than that registered on January 1, 1931, and the index on the date under review was lower. Statements were received from 1,024 establishments with 123,218 employees, as compared with 135,775 in the preceding month. Important declines were shown in transportation, construction and manufacturing, especially in food, textile, rubber and iron and steel factories. On the other hand, retail trade was seasonally busier.

*Quebec.*—Manufactures reported a loss in Quebec City, and transportation and construc-

tion also afforded less employment; the 138 co-operating employers reduced their staffs from 12,897 persons on December 1, to 11,907 at the beginning of January. This decline exceeded that indicated on January 1 of last year, when the index was higher.

*Toronto.*—Toronto firms showed a smaller seasonal contraction than on January 1, 1931, but employment was then in greater volume. There were losses in manufacturing, the most noteworthy being in the textile, metal, food, printing and publishing and electrical apparatus groups; construction and transportation were also slacker, but retail trade reported considerable improvement. Returns were tabulated from 1,147 employers with 113,658 workers, compared with 119,488 in their last report.

NOTE.—The "Relative Weight" in Table I shows the proportion of employees in the indicated area to the total number of all employees reported in Canada on the date under review.

Relative weight of Employment by Districts as at Jan. 1, 1932.....	100.0	9.1	27.7	41.9	13.5	7.8

*Ottawa.*—Manufacturing and construction registered seasonal curtailment, and trade also afforded less employment. The working forces of the 161 reporting establishments aggregated 13,079 persons, or 524 fewer than at the beginning of December. This reduction involved rather more employees than that recorded on the same date last year, when industrial activity was greater.

*Hamilton.*—Data were received from 234 firms in Hamilton employing 28,756 workers, as against 29,621 on December 1. Manufacturing and transportation showed reduced activity, while highway construction and services reported improvement. The declines noted on January 1, 1931, were smaller, and the index was then higher.

*Windsor and the adjacent Border Cities.*—There was a large increase in the number

employed in the Border Cities on January 1, 1932, the gain being due to unemployment relief works. On the other hand, manufacturing was seasonally quiet. Returns were compiled from 136 establishments with 10,527 persons in their employ, or 1,343 more than on December 1. Activity was less than on January 1, 1931, although a pronounced contraction had then been indicated.

*Winnipeg.*—Factory employment declined in Winnipeg, but construction showed improvement. The 376 co-operating firms reported 32,892 employees, compared with 33,138 in the preceding month. This reduction did not involve so many workers as that recorded on January 1, 1931, but employment was then more active.

*Vancouver.*—Further reductions took place in Vancouver, according to returns from 333

NOTE.—The "Relative Weight" in Table 2 shows the proportion of employees in the indicated city to the total number of all employees reported in Canada on the date under review.

Relative weight of employment by Cities as at Jan. 1, 1932....	14.7	1.4	13.6	1.6	3.4	1.3	3.9	3.2

employers of 26,723 persons, as compared with 28,963 on December 1. A much smaller decrease had been indicated on the same date last year, and the index then was higher. There were losses in manufacturing, construction and trade on January 1, 1932, as compared with the preceding month, while other groups did not show much change.

Index numbers by cities are given in Table II.

### Manufacturing

The losses in employment registered by manufacturers were rather smaller than the average decline reported at the beginning of January in the eleven years of the record, but in spite of this, the index was lower than in any other year since 1925. The most

extensive reductions on the date under review were in iron and steel, food, lumber, textile and pulp and paper, but the building material, leather, non-ferrous metal and rubber industries also recorded important curtailment, and smaller losses were indicated in musical instrument, electric current, electrical apparatus, mineral product and other factories. As in previous years, the declines so generally reported were largely due to shut-downs for holidays, inventories and repairs, and considerable improvement may be expected in the next report. Statistics for January 1 were compiled from 4,750 manufacturers, employing 413,824 operatives, compared with 442,306 on December 1.

NOTE.—The "Relative Weight" in Table 3 shows the proportion of employees in the indicated industry to the total number of all employees reported in Canada on the date under review.

TABLE III.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES

(AVERAGE CALENDAR YEAR 1926=100)

	All industries	Manufacturing	Logging	Mining	Communications	Transportation	Construction	Services	Trade

The "Relative Weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

cept British Columbia reported reduced employment, but the heaviest contractions were in Ontario.

*Leather Products.*—There was a decline in the leather industries at the beginning of January, particularly in boot and shoe factories. The shrinkage involved slightly fewer employees than that noted on the corresponding date last year, when the index was some five points lower. A combined working force of 15,680 persons was registered by the 232 firms making returns, as compared with 16,892 in the preceding month. The greatest losses occurred in Quebec and Ontario.

*Lumber Products.*—Seasonal contractions on a much smaller scale than on January 1, 1931, were noted in lumber mills, 762 of which reduced their payrolls from 32,583 on December 1 to 29,062 workers at the beginning of January. Employment was in smaller volume than on the corresponding date last year. Sawmills registered the most pronounced decreases, but there was also curtailment in furniture, match, container and other wood-using industries. There were especially marked losses in Ontario, although employment generally declined.

*Musical Instruments.*—Thirty-five manufacturers of musical instruments released 441 persons from their staffs, bringing them to 1,656 at the beginning of January. Practically all the decrease took place in Quebec and Ontario. A larger recession had been noted on January 1 a year ago, and the index number was then very slightly lower.

*Plant Products, Edible.*—There were seasonal reductions in employment in all branches of the vegetable food group, the greatest being in sugar and syrup, canning, biscuit, chocolate and confectionery and flour and cereal factories. The working forces of the 403 co-operating employers totalled 27,087 persons, as compared with 30,902 in their last report. The contractions in Ontario were especially pronounced, although the movement was generally unfavourable. The declines noted at the beginning of January last year were on a much greater scale, but the index number then was fractionally higher than on the date under review.

*Pulp and Paper Products.*—The shrinkage at the beginning of January, 1932, was similar to that noted in the same period in 1931, when employment was, however, in greater volume. Statistics were received from 550 firms, whose staffs aggregated 54,082 workers, or 2,498 fewer than in their last report. The most noteworthy losses were in Quebec and

Ontario, although the trend was downward in all provinces. Pulp and paper mills reported a large share of the reduction, but there were also declines in plants producing paper goods and in printing and publishing establishments.

*Rubber Products.*—Rubber factories showed a decrease, which greatly exceeded that of January 1, 1931; 44 plants had 10,476 employees on the date under review, as against 12,151 at the beginning of December. The largest losses took place in Quebec. The index number, at 82.2, was considerably lower than on the same month of last year, when it had stood at 106.3.

*Textile Products.*—The 773 textile firms furnishing data released a much smaller proportion of their total operatives than was the case among the establishments reporting at the beginning of January, 1931, when the index number was a few points higher than on the date under review. Their payrolls included 75,105 persons on January 1, 1932, against 78,296 in the last report. Ontario recorded the bulk of the shrinkage, which was especially marked in the hosiery and knit goods and garment divisions.

*Tobacco, Distilled and Malt Liquors.*—There was a slight falling-off in employment at the beginning of January in the tobacco and beverage groups, in which very considerable declines had been recorded on January 1 last year, when employment was in smaller volume. Statements were tabulated from 151 manufacturers in this group, employing 15,342 workers, or 101 fewer than on December 1. Practically all the loss took place in distilled and malt liquor factories, and largely in Ontario, while in Quebec moderate improvement was noted in the group as a whole.

*Chemical Products.*—Employment in chemical and allied product plants, chiefly in Ontario, showed a contraction on January 1, when 158 persons were released from the labour forces of the 135 establishments, which had 8,056 employees. Greater declines had been noted on the corresponding date a year ago, when the index number was a few points higher.

*Clay, Glass and Stone Products.*—Further recessions in employment were made in building material works, 179 of which reported an aggregate staff of 8,236, as compared with 9,548 in the preceding month. All provinces, except British Columbia, shared in this curtailment, which, however, was most marked in Quebec and Ontario. Brick and stone plants recorded important declines; these were rather less than those of January 1, 1931, but employment then was decidedly more active.

*Electric Current.*—There were large decreases in the number employed in electric current plants, according to statistics from 92 producers, employing 14,455 workers, or 961 fewer than on December 1. British Columbia reported the greatest falling-off, which involved rather more employees than that indicated at the beginning of January last year, when the index was higher.

*Electrical Apparatus.*—A further reduction in personnel was registered by the 84 co-operating electrical apparatus factories, whose labour forces aggregated 14,045 persons on January 1, as compared with 14,808 in the preceding month. Employment was in lesser volume than on the same date of 1931; somewhat smaller declines had then been noted.

*Iron and Steel Products.*—Automobile, crude, rolled and forged, heating appliance, general plant machinery and sheet metal works reported decided curtailment, while less extensive losses were shown in agricultural implement factories and other divisions of this group; the payrolls of the 757 firms furnishing data in the iron and steel group totalled 92,035, against 98,262 employees on December 1. This contraction (which was on a smaller scale than on the corresponding date last year, when the index was higher) was most pronounced in Ontario, but the movement was generally downward.

*Non-Ferrous Metal Products.*—The loss recorded in non-ferrous metal products involved about the same number of workers as that indicated on the same date in 1931, when the index was many points higher than on January 1, 1932. Returns were compiled from 124 employers of 14,418 persons, as compared with 15,644 at the commencement of December. The most noteworthy reductions were in Ontario. An analysis of the data by industries shows that the smelting and refining and lead, tin, zinc and copper groups released most workers.

*Mineral Products.*—Declines were noted in this group, the shrinkage, however, being less than that registered at the beginning of last year. A combined working force of 11,475 persons was employed by the 97 establishments whose returns were received, and who had 11,890 employees on December 1. The situation was not so favourable as on January 1, 1931, although greater curtailment had then been indicated.

### Logging

Logging, which has been exceptionally dull this winter, showed a moderate decrease, which involved fewer workers than are ordinarily re-

leased from logging camps at the holiday season; in spite of this, employment was in less volume than at the beginning of January of most years for which data are available. A combined working force of 18,772 men was reported by the 232 co-operating firms, who had 19,854 employees in the preceding month. Improvement was shown in the Prairie Provinces, while the movement elsewhere was downward.

### Mining

*Coal.*—There was a slight contraction in coal mines, 83 of which reduced their payrolls from 26,347 persons on December 1, to 26,283 at the beginning of January. A falling-off was shown in the Prairie Provinces, but in the Maritime Provinces and British Columbia the tendency was favourable. The index number on January 1, 1931, was higher, although employment had then shown a considerable reduction.

*Metallic Ores.*—Practically no change was noted in metallic ore mines, according to data from 61 firms who employed 15,834 persons at the beginning of January. The index was slightly lower than on the same date of last year.

*Non-Metallic Minerals (other than coal).*—The trend of employment in this division continued seasonally downward, the reductions being on a larger scale than on January 1 a year ago, when the index was many points higher. Statements were received from 81 firms employing 5,132 workers, as compared with 6,183 in the preceding month. Quebec recorded the greatest shrinkage.

### Communications

Further losses were reported in telephones and telegraphs; the situation compared unfavourably with that on the same date in 1931. The payrolls of the companies and branches furnishing data declined from 26,072 on December 1, to 25,462 employees at the beginning of January.

### Transportation

*Street Railways and Cartage.*—Employment in local transportation showed a further seasonal decline, involving rather more workers than that reported on January 1, 1931, when the index number was some five points higher. A combined staff of 22,971 persons was employed by the 164 co-operating firms, who had 23,881 employees in the preceding month. All provinces, except British Columbia, shared in the reductions, those in Quebec being most marked.

*Steam Railways.*—Employment on steam railways showed a decrease involving many more workers than that indicated on the corresponding date a year ago; the index number then was higher than on the date under review. Improvement in the Maritime Provinces was offset by contractions elsewhere. The payrolls of the 108 companies and divisional superintendents furnishing returns aggregated 65,805 persons, as against 69,235 in their last report.

*Shipping and Stevedoring.*—There was a large reduction in employment in water transportation, chiefly in Quebec and Ontario, while a seasonal increase was noted in the Maritime Provinces, and slight improvement also occurred in British Columbia. A rather smaller number of workers was let out than on January 1, 1931, when the index was, however, a few points higher. Returns were compiled from 86 employers of 11,785 men, compared with 16,834 in the preceding month.

### Construction and Maintenance

*Building.*—Continued curtailment of operations was shown in building construction; 690 contractors reduced their staffs from 34,450 at the beginning of December to 25,344 on January 1. The most pronounced declines were in Quebec, although there were general losses, except in the Prairie Provinces. More extensive decreases were indicated on January 1 last year, but the index was then many points higher.

*Highway.*—Statements were received from 350 firms employing 68,539 workers, or 16,665 fewer than on December 1. Despite this important decline, road construction, owing to the unemployment relief measures throughout the Dominion, was generally maintained at a much higher level than in the winter of other years for which data are available. Employment in Ontario showed a moderate advance since

December 1, while important losses were indicated in the remaining provinces, that in the Western areas being most pronounced.

*Railway.*—A further recession was shown in this division, in which 37 employers reported 25,028 persons on their payroll, as compared with 27,016 in the preceding month. The index was rather lower than on January 1 of a year ago, although the declines then noted were very considerably larger. Ontario and the Prairie Provinces recorded the bulk of the decrease, while increased activity was indicated in the Maritime Provinces, chiefly owing to snow-removal operations.

### Services

Reduced activity was registered in the service group, in which 284 firms employed 21,266 persons, or 121 fewer than in the preceding month. Larger decreases were indicated at the beginning of January, 1931, when the index was higher.

### Trade

Retail trade afforded greater employment than on December 1, but losses occurred in wholesale establishments. The 839 co-operating employers in the trade group had 89,915 workers, compared with 89,899 in their last report. Employment was at a lower level than on January 1, 1931, although the general tendency was then downward, as on January 1 in most years for which data are available.

The accompanying tables give index numbers of employment by economic areas, leading cities and industries. The columns headed "Relative Weight" show the proportion that the number of employees reported in the indicated area or industry is of the total number of employees reported in Canada by the firms making returns on the date indicated.

## (2) Unemployment in Trade Unions at the Close of December, 1931

The term unemployment as used in the following reports has reference to involuntary idleness due to economic causes. Persons who are engaged in work other than their own trades, or who are idle because of illness are not considered as unemployed, while unions involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

The gradual decline in employment which has been in evidence for the past few months continued in December. Between-season dullness, especially in out-of-door activities and in the manufacturing groups, was largely responsible for the adverse situation. Reports for the month of December were received from 1,874 unions having a combined membership of 188,553 persons, of whom 39,713, or a percentage of 21.1, were idle on the last day of the month, contrasted with 18.6 per cent in November. Conditions were somewhat quieter than in December, 1930, when 17.0 per cent were reported idle. With the

exception of New Brunswick and Manitoba unions, which reported slight improvement in conditions, all other provinces showed some increase in unemployment in December over the November figures. Quebec unions registered the most important recessions. This was principally traceable to the usual seasonal decline in employment for garment workers.

Curtailment of activity was shown among building and construction workers, especially in Ontario and Quebec. Compared with the situation in December, 1930, conditions in all provinces reported less employment. British Columbia and Quebec showed the largest recessions in the volume of work afforded, while the decline in New Brunswick was fractional only.

to, Edmonton and Vancouver unions, when compared with December, 1930. There was a somewhat smaller decline among Regina unions, while the change in Winnipeg was nominal only. Halifax and St. John unions reported better situations.

Accompanying this article is a chart which illustrates the trend of unemployment by months from January, 1926, to date. The curve during January, 1931, showed a slight improvement over the previous month. This favourable trend continued until April, when the best conditions of the year prevailed, there being at the end of that month 14.9 per cent unemployed. The May situation was less favourable than in April, due largely to quietness in the garment trades in Quebec.

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

A report on unemployment in the largest city in each province, with the exception of Prince Edward Island, is compiled separately each month. During December, Regina and Winnipeg unions reported a better situation than in November, but in all other cities used for comparison some declines in employment volume were noted, more especially among Montreal unions. The situation reported by Halifax, St. John, and Edmonton unions for December, though less favourable than that of November, was not particularly outstanding. Toronto and Vancouver unions showed little change over the previous month. Fairly substantial increases in unemployment volume were noted among Montreal, Toron-

This condition continued throughout June and July. In August, however, conditions improved, but in September the adverse trend was again in evidence and continued to the close of the year. At the end of December, 21.1 per cent of the membership involved was without work. This percentage was the highest for any month of the year and also the highest since the collection of reports was first undertaken.

The manufacturing industries, with 504 unions reporting at the close of December, a total of 52,928 members, indicated an unemployment percentage of 23.8, contrasted with 19.5 in November. The unemployment increases took place principally in the textile

group, especially among garment workers in the Province of Quebec, offset, in part, by improved conditions among carpet, hat, cap and glove workers. The situation in the pulp and paper group remained at the same level as that reported in November, and among iron and steel workers a better situation was registered than that of the previous month. Though some nominal declines in activity were noted among brewery, tobacco and bakery workers and general labourers, these

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS, BY PROVINCES

Month	N.S. and Prince Edward Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada
Average 1919.....	3.1	2.0	3.4	2.7	2.1	3.2	2.0	7.9	3.4

were largely offset by the improved conditions reported by butchers, leather, fur workers, metal polishers, and glass workers. Compared with the situation in December, 1930, when 17.7 per cent of idleness was recorded in the manufacturing industries, butchers, bookbinders, leather workers, hat and cap workers, glass workers, pulp and paper mill workers, and boilermakers, were more actively engaged. The greatest declines in employment afforded, occurred among garment workers, printing tradesmen, with the exception of bookbinders mentioned above, and among iron and steel workers.

Practically no change was registered among coal miners during December, the 52 unions reporting 19,217 members, 10.0 per cent of whom were idle, contrasted with 9.5 per cent recorded at the close of November. Slight recessions were noted in Alberta, while the Nova Scotia and British Columbia situations remained about the same. Comparing the figures at the end of December with those registered at the close of December, 1930, when 4.4 per cent of inactivity was shown, Nova Scotia and Alberta unions were responsible for the increase in unemployment recorded during the month under review, the condition in British Columbia remaining practically stationary. Shorttime continued to prevail in both eastern and western coal fields.

The usual seasonal dullness in the building and construction trades was experienced during December. The 261 unions reporting an aggregate membership of 25,188 persons, 58.1 per cent of whom were idle at the close of the month, contrasted with 51.9 per cent out of work in November. Bridge and structural iron workers registered slightly more employment than in the preceding month. Fractional losses only, occurred among carpenters and joiners, while losses among electrical workers were fairly substantial. The largest increases in unemployment over the November situation were noted among bricklayers, painters, plumbers, granite and stone workers, tile layers, and building labourers. A substantial increase in unemployment was registered in the building trades over that recorded in December, 1930. All trades in the group showed quite extensive employment recessions, except granite and stone cutters, where the decline in employment afforded was not pronounced.

In the transportation group employment in December increased slightly over that reported at the end of November. The 796 unions registering a total membership of 65,188, reported 12.3 per cent of idleness compared with 11.1 per cent in November and with 10.6 per cent recorded a year ago. The increase in slackness

TABLE II.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY GROUPS OF INDUSTRIES

Months	Fishing	Lumbering and Logging	Mining	Manufacturing Industries	Vegetable products	Pulp and paper products	Pulp and paper mill workers	Printing and lithographing	Wood products	Fibres, textiles and textile products	Textile and carpet workers	Hat, cap and glove workers	Animal products	Iron and its products	Non-ferrous metals	Clay, glass and stone products	Mineral products	Miscellaneous manufacturing industries	Building and construction	Shipping and stevedoring	Steam railway operation	Local transportation	Communication	Telegraph operation	Telephone operation	Trade (retail) shop (clerks)	Services	Governmental	Miscellaneous	All occupations

in the steam railway group, which embraces over 82 per cent of the total group membership, was the principal reason for the adverse employment movement indicated in each comparison. Declines were fairly heavy among navigation workers and to a lesser degree among teamsters and chauffeurs. Street and electric railway employees were slightly better engaged in December than in November, but employment receded slightly from that reported at the end of December, 1930.

Each month, reports on unemployment among longshoremen are tabulated separately owing to the casual nature of this work. For December reports were received from a total of 14 unions with a membership of 6,217 persons, 1,484 of whom, or a percentage of 23.9, were without work, contrasted with 22.2 per cent in November, and with 53.7 per cent at the close of December, 1930.

Reports were received in December from 73 associations of civic employees. The aggregate membership of this group was 8,594 persons, 2.3 per cent of whom were registered as unemployed on the last day of the month, compared with 1.4 per cent recorded at the close of November, and with 1.0 per cent at the close of December, 1930.

In the miscellaneous group, reports were received from 133 unions, combining a membership of 5,982 persons, 19.1 per cent of whom were disengaged at the end of December, compared with percentages of 19.2 at the close of November, and with 15.1 reported at the close of December, 1930. Stationary engineers and firemen showed a slight unemployment increase over the November situation, as did also hotel and restaurant employees and unclassified workers.

These losses were, however, offset by the gains made in work afforded among theatre and stage employees, and barbers. Compared with the situation at the close of December, 1930, when 15.1 per cent were registered as unemployed, hotel and restaurant employees and stationary engineers and firemen showed the greatest increase in inactivity, followed by minor increases among barbers and theatre and stage employees. Unclassified workers reported increased activity, which to some extent offset the other recessions.

The four unions of fishermen reporting, showed a membership of 1,137 persons with 20.2 per cent recorded as idle at the close of December. This percentage contrasted with 30.0 per cent at the end of November and with 11.5 per cent registered among these workers in December, 1930.

Among lumber workers and loggers a better situation was shown at the close of December than was reported at the end of November, or at the close of December, 1930. This was indicated by 4 unions reporting 752 members, 20.6 per cent of whom were idle on December 31, 1931, contrasted with 30.1 per cent at the end of November and with 41.2 per cent at the close of December, 1930.

Table I shows, by provinces, the percentages of members who were, on an average unemployed each year from 1919 to 1931, inclusive, and also the percentage of unemployment, by provinces, for December of each year from 1919 to 1928, inclusive, and for each month from January, 1929, to date. Table II summarizes the returns in the various groups of industries for the same months as Table I.

### (3) Employment Office Reports for December, 1931

The records of the Employment Service of Canada for the month of December, 1931, when compared with those of November, showed a decrease of 24 per cent in the volume of business transacted. A loss of nearly 35 per cent was also recorded when a comparison was made with the average daily placements of December, 1930. In both instances fewer placements in construction and maintenance were responsible for the losses shown. Logging and services, likewise, showed substantial declines from December a year ago, with smaller losses recorded in trade, transportation, and mining, while farming and manufacturing recorded gains.

The accompanying chart shows the trend of employment since January, 1929, as represented by the ratio of vacancies notified and of placements effected for each 100 applica-

tions for work registered at the offices of the Service throughout Canada, computations being made semi-monthly. It will be noted that the curve of vacancies and of placements in relation to applications showed a marked upward trend throughout December, but at the close of the month the level attained by each was considerably below that recorded at the end of December, 1930. The ratio of vacancies to each 100 applications was 63.4 and 74.3 during the first and the second half of December, 1931, in comparison with ratios of 63.1 and 88.1 during the same periods of 1930. The ratios of placements to each 100 applications during the periods under review were 61.2 and 71.4 as compared with 61.8 and 87.0 during the corresponding month of 1930.

The average number of vacancies reported daily by employers to the offices of the

Service throughout Canada during December, 1931, was 1,418 as compared with 1,839 during the preceding month and with 2,142 in December a year ago.

The average number of applications for employment received daily by the offices during the month under review was 2,073 in comparison with 2,979 in November and with 2,853 during December, 1930.

The average number of placements made daily by the offices of the Service during December, 1931, was 1,375, of which 552 were in regular employment and 823 in work of

During the year 1931, the offices of the Service throughout Canada reported 486,384 vacancies, 826,153 applications, and 471,508 placements in regular and casual employment. This was the highest number of placements made during any year from the opening of the Service, but was mainly due to work undertaken as relief measures, sponsored by the Federal and Provincial Governments.

The following table gives the placements effected by the offices of the Employment Service of Canada each year from January, 1921 to date.

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications ————— Vacancies - - - - - Placements o-o-o-o-o

one week's duration or less, as compared with a total daily average of 1,806 during the preceding month. Placements in December a year ago averaged 2,106 daily, consisting of 633 placements in regular and 1,473 in casual employment.

During the month of December, 1931, the offices of the Service referred 37,021 persons to vacancies and effected a total of 35,747 placements. Of these, the placements in regular employment were 14,343, of which 11,544 were of men and 2,799 of women, while placements in casual work totalled 21,404. The number of vacancies reported by employers was 29,969 for men and 6,898 for women, a total of 36,867, while applications for work numbered 53,885, of which 45,104 were from men and 8,781 from women.

Year	PLACEMENTS		Totals
	Regular	Casual	
1921.....	280,518	75,238	355,756
1922.....	297,827	95,695	393,522
1923.....	347,165	115,387	462,552

1931.....	175,632	295,876	471,508

#### NOVA SCOTIA

During the month of December, 1931, positions through Employment Service Offices in Nova Scotia were 28 per cent less than in the preceding month, but over 25 per cent

higher than during the corresponding month of 1930. Placements declined nearly 28 per cent when compared with November, but were nearly 27 per cent higher than in December a year ago. The gain in placements over December, 1930, was due to work provided in relief of unemployment on highway construction, offset in part by fewer placements in the services group. The changes in all other divisions were nominal only, trade showing a slight gain and all other groups small declines. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 25; transportation, 41; construction and maintenance, 382; trade, 48; and services, 325, of which 252 were of household workers. There were 209 men and 65 women placed in regular employment during the month.

#### NEW BRUNSWICK

There was a decline of over 37 per cent in the number of positions offered through Employment Offices in New Brunswick during December when compared with the preceding month and of nearly 15 per cent in comparison with the corresponding month of 1930. Placements were nearly 38 per cent less than in November and nearly 15 per cent below December a year ago. The reduction in placements from December, 1930, was mainly due to a smaller demand for workers in the services group. There were also fewer placements in trade, but a small increase under construction and maintenance. The changes, however, in all groups, other than services, were unimportant. Placements by industrial divisions included: manufacturing, 22; construction and maintenance, 173; and services, 490, of which 358 were of household workers. Regular employment was found for 81 men and 34 women.

#### QUEBEC

The demand for workers, as indicated by orders received at Employment Offices in the Province of Quebec during December, were over 14 per cent less than in the preceding month but over 23 per cent greater than during the corresponding month of 1930. Placements declined nearly 18 per cent in comparison with November, but were over 31 per cent higher than during December a year ago. A large increase in placements in the services group was responsible for the gain over December, 1930, but manufacturing and trade also showed improvement. These gains, however, were partly offset by fewer placements in logging. The changes in other divisions were small. Industrial divisions in which most of the placements were effected during the

month were: manufacturing, 55; logging, 105; construction and maintenance, 176; trade, 44; and services, 776, of which 635 were of household workers. Placements in regular employment numbered 399, of men and 544 of women.

#### ONTARIO

During December, Employment Offices in Ontario received orders for nearly 22 per cent less workers than in the preceding month and for over 38 per cent fewer than during the corresponding month of 1930. Placements also were nearly 23 per cent fewer than in November and over 39 per cent below December a year ago. There was a very large reduction in placements under construction and maintenance when compared with December, 1930, which accounted for the adverse change for the province as a whole under this comparison. Although a considerable amount of work had been provided in relief of unemployment during the month under review, it was less than during the corresponding month of last year, December, 1930, the month when unemployment relief was first inaugurated, whereas a considerable number of placements have been made in each of the three months preceding December, 1931. There were fewer placements in services, trade and transportation, but gains were reported in all other groups, manufacturing showing the largest increase. Placements by industrial divisions included: manufacturing, 751; logging, 507; farming, 183; transportation, 124; construction and maintenance, 14,413; trade, 353; and services, 3,439, of which 1,877 were of household workers. There were 4,284 men and 1,076 women placed in regular employment during the month.

#### MANITOBA

The orders listed at Employment Offices in Manitoba during December called for slightly over 1 per cent more workers than in the preceding month but for nearly 33 per cent less than during the corresponding month of 1930. There was a gain of nearly 2 per cent in placements when compared with November, but a decline of over 33 per cent in comparison with December a year ago. As in Ontario, placements in relief work although heavy, were considerably less than during December, 1930, and accounted for the reduction for the province as a whole under this comparison. There were fewer placements also in logging, but gains in all other divisions, those in farming being the largest. Farm relief was responsible for the increase in farm placements. Industrial divisions in which

most of the placements were effected during the month included: manufacturing, 38; logging, 65; farming, 425; construction and maintenance, 2,556; trade, 139; and services, 1,057, of which 929 were of household workers. During the month 2,627 men and 374 women were placed in regular employment.

#### SASKATCHEWAN

Opportunities for employment, as indicated by orders received at Employment Offices in Saskatchewan during December, showed a 1 per cent gain over the preceding month but were nearly 30 per cent less than during the corresponding month of 1930. There was a decline of over 7 per cent in placements when compared with November and of over 35 per cent in comparison with December, 1930. The decline in placements from December a year ago was due to reductions under construction and maintenance and logging, offset, in part, by gains in farm placements due to the Dominion-Provincial Farm Relief Scheme. The changes in other groups were small. Placements by industrial divisions included; manufacturing, 51; logging, 31; farming, 721; transportation, 36; construction and maintenance, 1,141; trade, 45; and services, 634, of which 477 were of household workers. During the month 1,364 men and 307 women were placed in regular employment.

#### ALBERTA

Employment opportunities, as indicated by orders received at Employment Offices in Alberta during December, were nearly 16 per cent less than in the preceding month and over 41 per cent fewer than during December, 1930. There was a decrease of over 15 per cent in placements when compared with November and of nearly 42 per cent in comparison with December a year ago. Although relief work on highway construction was responsible for the majority of placements effected during the month, the total was considerably less than during December, 1930, and with reductions also in bush placements accounted for the decline under this comparison. The only groups to show gains were farming and manufacturing and these were small. Industrial divisions in which most of the placements were effected during the month were; manufacturing, 56; logging, 71; farming, 195; mining, 107; transportation, 29; construction and maintenance, 2,123; trade, 34; and services, 649, of which 330 were of household workers. Placements in regular employment numbered 1,066 of men and 212 of women.

#### BRITISH COLUMBIA

There was a decline of slightly less than 1 per cent in the number of positions offered through Employment Offices in British Columbia during December when compared with the preceding month and of over 19 per cent in comparison with the corresponding month of 1930. Placements were a little over 1 per cent less than in November and nearly 19 per cent below December, 1930. All industrial divisions participated in the reduction in placements from December a year ago, logging and services showing the largest decrease under this comparison. Placements by industrial divisions included: manufacturing, 46; farming, 41; construction and maintenance, 2,083; trade, 42; and services, 702, of which 482 were of household workers. During the month regular employment was found for 1,514 men and 187 women.

#### Movement of Labour

During the month of December, 1931, the offices of the Employment Service of Canada made 14,343 placements in regular employment, 3,745 of which were of persons for whom the employment found was outside the immediate district covered by the offices at which they were registered. Of the latter 361 were granted the Employment Service reduced transportation rate, 337 going to centres within the same province as the dispatching office and 24 to other provinces. The reduced transportation rate which is 2.7 cents per mile with a minimum fare of \$4 is granted by the railway companies to bona fide applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

In Quebec during December, 1931, one certificate for reduced transportation was granted at the Quebec City office to a bushman proceeding to employment within the territory covered by that office.

Ontario transfers at the reduced transportation rate in December numbered 208, of which 207 were to points within the province. Of these 80 were effected by the Port Arthur office which dispatched 77 bush workers, 2 miners and 1 domestic within its own zone. From North Bay 23 highway construction workers went to Pembroke, 15 highway construction men to Arden, 10 lumber workers to Sudbury, 1 chef to Timmins, and 1 clerk to Cobalt. On certificates received at Pembroke 46 bushmen journeyed to Sudbury, and 1 engineer and 1 carpenter to Timmins. The Fort William office transferred 11 bushmen within its own zone and 4 bushmen to Timmins, while from Hamilton 1 powder man

proceeded to Peterborough, and 1 cook to Port Arthur. In addition Windsor received 2 tool and die makers from Brantford; Sault Ste. Marie 2 miners from Cobalt; Timmins 1 pipefitter from Niagara Falls and one carpenter from Chatham and Arden 6 drillers from Sault Ste. Marie. The 1 worker going outside the province was a granite cutter transported from Toronto to Montreal.

Both the provincial and interprovincial labour movement in Manitoba during December emanated from Winnipeg, and comprised the transfer of 47 workers, 30 of whom went to points within the province and 17 outside. Provincially 1 hotel general was conveyed to Dauphin, 1 farm housekeeper to Brandon, and 19 farm hands, 1 farm domestic, 1 blacksmith, 6 bushmen and 1 fisherman to employment within the Winnipeg zone. Of the persons travelling to other provinces, 7 went to the Port Arthur zone, including 2 cordwood cutters, 1 town domestic, 1 farm hand and 3 cooks, while to the Regina zone 5 farm hands, 1 farm domestic and 2 hotel workers were carried at the special rate, and to Saskatoon 1 farm hand and 1 farm domestic.

Saskatchewan offices granted 19 certificates for reduced transportation during December, 17 to provincial points, and 2 outside the province. The latter were issued at Saskatoon to 1 farm hand and 1 farm housekeeper proceeding to Edmonton. Within the province the Saskatoon office was instrumental in the transfer of 9 bushmen to Prince Albert, 1 farm hand to North Battleford, and 4 farm hands within its own zone. Securing certificates at Prince Albert 1 blacksmith and 1

bushman were conveyed to points within the same zone. The one remaining transfer was of a domestic travelling to Yorkton on a certificate received at Regina.

Taking advantage of the Employment Service reduced transportation rate in Alberta during December 76 workers proceeded to employment at various centres, 74 going within the province. Of these 72 were transferred from Edmonton, and included 3 farm hands travelling to Drumheller, 2 highway construction engineers to Calgary, and 44 mine workers, 13 farm hands, 5 bush workers, 2 sawmill workers, 1 labourer, 1 hotel maid and 1 teamster to points within the Edmonton zone. In addition, from Calgary 1 cook was sent to Medicine Hat and 1 farm hand within the Calgary zone. The 2 workers journeying outside the province were farm hands dispatched from Edmonton to North Battleford.

The Vancouver office was responsible for all transfers effected in British Columbia during December, which were 10 in number. Of these 8 were of persons going within the province, and included 4 carpenters, 2 cooks and 1 planer man, bound for Penticton, and 1 hotel cook for Vernon. The 2 interprovincial transfers were of a farm hand and a farm domestic, destined to the Edmonton zone.

Of the 361 persons who benefited by the Employment Service reduced transportation rate during December, 224 were transported by the Canadian National Railways, 127 by the Canadian Pacific Railway, 6 by the Northern Alberta Railway, and 4 by the Temiskaming and Northern Ontario Railway.

#### (4) Building Permits issued in Canada during December

The building permits issued by 61 cities in Canada in December, 1931, represented construction work valued at \$7,397,984, as compared with \$7,992,815 in November, 1931, and \$15,440,281 in December, 1930. There was, therefore, a decrease of \$594,831 or eight per cent in December as compared with the preceding month, and of \$8,042,297 or 52.1 per cent in comparison with the high total for the same month in 1930. In this record, which goes back to 1920, the December, 1931, figure was exceeded by the total for December of the years, 1926-1930, but was larger than the aggregate for December in the preceding six years, while the wholesale costs of building materials, as measured by the Bureau's index number, was lower than in any other year since 1920.

Detailed statements were received from some 50 cities, showing that they had issued almost 400 permits for dwellings valued at some \$1,900,000 and over 1,000 permits for other

buildings at an estimated cost of about \$5,000,000. During November, the construction of some 800 dwellings and 1,800 other buildings was authorized; these were estimated to cost approximately \$4,000,000 and \$3,000,000, respectively.

As compared with the preceding month, New Brunswick, Quebec, Ontario and Manitoba registered increases in the value of the authorized building; the gains of \$342,857 or 11.2 per cent in Ontario, and \$246,265 or 112.1 per cent in Manitoba were most pronounced. Declines were indicated in the remaining provinces, that of \$898,462 or 97.0 per cent in Saskatchewan being greatest.

All provinces except New Brunswick recorded decreases as compared with December, 1930, in the value of the building authorized. In this comparison also, Quebec reported the most marked loss of \$4,158,200 or 57.4 per cent.

Montreal and Toronto showed increases in the value of the building permits issued as compared with November, but decreases in comparison with December, 1930. In Winnipeg,

there was a loss in the former and a gain in the latter comparison, while Vancouver reported declines as compared with both November, 1931, and December, 1930. Moncton, Saint John, Galt, Hamilton, Stratford, Welland, Brandon and Nanaimo recorded advances in both comparisons.

*Cumulative record for 1931.*—The following table shows the value of the building authorized by 61 cities during December and in the years since 1920; the 1931 figures are unrevised, while for preceding years the statistics are revised. (A revised statement for 1931 will be issued next month). Index numbers, based upon the total value of the building authorized by these cities during 1920 as 100, are given below, as are the average index numbers of wholesale prices of building materials in the years, 1920-1931. (Average 1926= 100).

Year	Value of permits issued in December	Value of permits issued in twelve months	Indexes of value of permits issued in twelve months (1920=100)	Average Indexes of wholesale prices of building materials in twelve months (Average 1926=100)
	\$	\$		
1931.....	7,397,984	110,971,410	94.8	82.6
1930.....	15,440,281	166,379,325	142.2	90.9
1929.....	14,688,682	234,944,549	200.8	99.0
1928.....	16,095,160	219,105,715	187.2	88.1
1927.....	11,755,566	184,613,742	157.8	96.7
1926.....	11,508,818	156,386,607	133.6	100.0
1925.....	7,363,777	125,029,367	106.8	103.8
1924.....	6,463,319	126,583,148	108.2	106.7
1923.....	6,974,256	133,521,621	114.1	111.7
1922.....	9,517,402	148,215,407	126.7	108.6
1921.....	5,537,330	116,794,414	99.8	122.7
1920.....	4,844,354	117,019,622	100.0	152.4

The unrevised statistics for 1931 indicate that last year's aggregate was the smallest since 1920; it should also be noted, however, that the Bureau's index number of wholesale prices of building materials was also considerably lower than in any other year since 1920.

The accompanying table gives the value of the building permits issued by 61 cities in November and December, 1931, and December, 1930. The 35 centres for which records are available since 1910 are marked by asterisks.

Technical high schools operating in Saskatchewan under the Dominion Technical Education Act and the Provincial Vocational Education Act are now in operation in Regina, Saskatoon and Moose Jaw, with an enrolment of approximately 2,500 students in day classes and 1,600 students in evening classes.

## EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

DETAILED reports and tables showing the employment conditions in Great Britain and Northern Ireland are given in the British *Ministry of Labour Gazette* from month to month, a monthly summary of this information also being published. This summary showing the employment situation during December, 1931, is reproduced below. The following report on unemployment conditions in the United States is based on the statistics published by the United States Department of Labour, showing the recent trend of employment throughout the country.

### Great Britain

Employment continued to improve in most industries during December. It improved in coal mining and in general engineering, in glass and glass bottle manufacture, in most of the metal trades, in all the textile industries except hosiery manufacture, in the tailoring, paper, entertainment and distributive trades, and in dock and harbour, road transport, and hotel and boarding house services.

On the other hand, employment declined in the pottery, pig-iron, tinplate, and boot and shoe industries, in marine engineering, and in the building industry.

Employment showed a further improvement in the North of England, particularly in the North-Western division, where it was considerably better than at the corresponding date in 1930. It also showed an improvement in Wales; but in all these areas and also in Scotland and Northern Ireland, it was still very bad. In the Midlands and the southern part of the country it showed little change and remained bad in the former and slack in the latter.

Among the workpeople, numbering approximately 12,770,000, insured against unemployment in Great Britain and Northern Ireland, and working in practically every industry except agriculture and private domestic service, the percentage unemployed at December 21, 1931 (including those temporarily stopped as well as those wholly unemployed), was 20·9, as compared with 21·4 at November 23, 1931, and with 20·2 at December 22, 1930. The percentage wholly unemployed at December 21, 1931, was 17·7 as compared with 18·0 at November 23, 1931, while the percentage temporarily stopped was 3·2, as compared with 3·4. For males alone, the percentage at December 21, 1931, was 23·2, and for females 15·0; at November 23, 1931, the corresponding percentages were 23·6 and 15·9.

At December 21, 1931, the number of persons on the Registers of Employment Exchanges in Great Britain were 2,002,464 wholly unemployed, 403,432 temporarily stopped, and 104,025 normally in casual employment, making a total of 2,509,921. This was 105,194 less than a month before, but 101,550 more than a year before. The total included 2,005,810 men, 59,783 boys, 403,340 women and 40,988 girls.

The 2,002,464 wholly unemployed included approximately 941,059 insured persons with claims for insurance benefit (consisting of those who (a) had paid at least 30 contributions during the preceding two years, (b) had received less than 156 days' benefit in their current benefit years and, (c) if 156 days' benefit had become payable in a previous benefit year ending on or after November 12, 1931, had paid at least 10 contributions since the 156th day of benefit); 777,645 insured persons with claims for transitional payments; 177,873 insured persons not in receipt of insurance benefit or transitional payments, and 105,887 uninsured persons.

In Great Britain and Northern Ireland, the total number of persons on the registers of Employment Exchanges at December 21, 1931, was 2,573,552.

### United States

The Bureau of Labour Statistics of the United States Department of Labour reports the changes in employment and pay-roll totals in December, 1931, as compared with November, based on returns made by 49,841 establishments in 15 major industrial groups, having in December 4,572,588 employees, whose combined earnings in one week were \$101,655,164.

The combined totals of these 15 industrial groups show an increase of 0·7 per cent in employment and an increase of 0·3 per cent in pay-roll totals.

Increased employment was shown in 3 of the 15 industrial groups included in this monthly employment survey, the retail trade group reporting the usual large seasonal increase in employment reflecting the Christmas trade, while small increases in employment were reported in the crude petroleum and the bituminous coal mining industries. Increased pay-roll totals were reported in the retail trade, crude petroleum, and telephone and telegraph groups, the last named group reporting a small decline in employment coupled with increased earnings.

In the remaining 11 groups in which both decreased employment and earnings were reported, decreases in employment of 1 per cent or less were shown in manufacturing, wholesale trade, and laundries, while slightly larger declines were reported in the power-light-water, electric railroad operation, hotel, and metalliferous mining groups. The anthracite mining and dyeing and cleaning groups reported decreases of 4.4 and 5.8 per cent, respectively, in employment, and the quarrying and non-metallic mining and the canning and preserving groups reported pronounced declines over the month interval due to the seasonal closing of establishments in these two groups.

In a statement issued on January 20 in its official publication, the *Monthly Survey of Business*, the American Federation of Labor presents the following summary of unemployment conditions in the United States:

"Although business revival is the ultimate cure for unemployment, its coming will be slow and unemployment will continue at abnormal levels for the year 1932. Those out of work now number well over 8 million,

according to a conservative estimate based on Government figures; unemployment has increased by over 1,000,000 since January a year ago. To care for these sufferers at once is a matter of life and death. Their resources are exhausted. We must plan now to feed, clothe and house them for the coming year. The graph shows the rise of unemployment this year to a new peak in December, 1931, when 21.8 per cent were out of work according to our weighted index figures.

"These unemployed men and women have families to provide for. A careful estimate shows an average of two dependants per unemployed worker, corresponding to a family of three. The Children's Bureau and the Bureau of Agricultural Economics give \$5 to \$7 per week for a food budget as the absolute minimum below which a family of three cannot go without illness and starvation. At minimum levels food is 45 per cent of the entire budget. Therefore the minimum relief budget for three is from \$577 to \$806 a year. Even this budget will cost from \$3.5 billion to \$5.7 billion for 1932."

## FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding the contracts executed by various departments of the Government of Canada which include among their provisions fair wages conditions for the protection of the labour to be employed.

Reference was made in the *LABOUR GAZETTE*, June, 1930, page 652, to the Fair Wages and Eight-Hour Day Act of Parliament which was adopted on May 30, 1930. The text of this measure appeared in the April, 1930, issue, page 383. This Act provides as follows:—

3. (1) Every contract made hereafter with the Government of Canada for construction, remodelling, repair or demolition of any work shall be subject to the following conditions respecting wages and hours:—

(a) All persons in the employ of the contractor, sub-contractor, or of any other person doing or contracting to do the whole or any part of the work contemplated by the contract shall be paid such wages as are generally accepted as current from time to time for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged; provided that wages shall in all cases be such as are fair and reasonable;

(b) The working hours of persons while so employed shall not exceed eight hours per day except in such special cases as

the Governor in Council may otherwise provide, or except in cases of emergency, as may be approved by the Minister.

(2) The provisions of this section shall not apply to persons employed in the fabrication or manufacture of materials, supplies or equipment for use in the work contemplated where such fabrication or manufacture is carried on in any established plant or factory other than a plant or factory established for the purposes of the work contemplated.

The Act was put into effect at once as respects contracts for construction, remodelling, repair or demolition, both as to its provisions as to current and fair and reasonable rates of wages and as to the application of the eight-hour day.

With respect to contracts for other classes of work, the Fair Wages Policy of the Government of Canada (which has been in effect since 1900 and was expressed in an Order in Council adopted June 7, 1922, and amended April 9, 1924), requires that they must contain either a fair wage schedule based on the current wages rates and working hours in the district, or a general fair wage clause requiring adherence to the current wage rates and working hours in the district for the different classes of labour employed or, in the absence of such standard conditions, fair and reasonable rates and hours. The conditions above-mentioned are referred to in the Order in

Council as "A" conditions. Following is the text of the General Fair Wage Clause referred to:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade in the district where the work is carried on or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may in the manner and subject to the provisions hereinabove set forth, decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any service performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

It is further provided in the Order in Council that "all contracts for the manufacture and supply to the Government of Canada of fittings for public buildings, harness, saddlery, clothing and other outfit for the military and naval forces, Royal Canadian Mounted Police, letter carriers, and other

Government officers and employees, mail bags, letter boxes, and other postal stores, and any other articles and things hereafter designated by the Governor in Council" must contain provisions for the observance of the current wages rates and working hours in the district, or, in the absence of any such current standards, fair and reasonable rates and working hours. These conditions are referred to in the Order in Council as "B" conditions, and include the following Fair Wages Clause:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work such hours as those fixed by the custom of the trade as respects hours in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, except for the protection of life and property, or on due cause shown to the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the Contractor until the Minister of Labour's decision has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

In both the "A" and "B" conditions of the Fair Wages Order in Council the Minister of Labour is empowered to determine questions which may arise as to what are the current or fair and reasonable wages rates and working hours. The contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and addresses of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government any time it may be expedient to the Minister to have the same inspected.

It is declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms

of contract until he has filed a statement showing: (1) the wage rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payment remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workman employed claim therefor may be filed with the Minister of the department with which the contract has been made and payment of such claim may be made by the latter. (Under the "A" conditions these rights extend to moneys payable for the use or hire of horses or teams.)

All workmen employed in the execution of the contract shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

Under the "A" conditions clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contract are specially instructed to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

The "B" conditions provide that the contractor's premises and the work being performed under contract shall be open for inspection at any reasonable time by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

During the past month statements were received in the Department of Labour showing that the following contracts were recently executed by the Government of Canada, those included under the "A" groups containing either fair wages schedules as shown below, or the General Fair Wages Clause above mentioned, and those coming under the "B" group containing the Fair Wages Clause specified in the "B" Conditions as given above:—

#### DEPARTMENT OF NATIONAL DEFENCE

##### *Contract in Group "A" (Construction, etc.)*

Completion of Barrack Block, Royal Canadian Air Force Training Station, Trenton, Ont. Name of contractors, The Quinte Construction Limited, Trenton, Ont. Date of contract, January 26, 1932. Amount of contract, \$84,066.53. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours labour not more than
	per hour	per day
Bricklayers and masons.....	\$1 00	8
Plasterers.....	1 00	8
Carpenters.....	0 70	8
Painters and glaziers.....	0 65	8
Ordinary labourers.....	0 40	8
Roofers (sheet metal).....	0 70	8
Roofers (tar and gravel).....	0 60	8
Electricians.....	0 70	8
Plumbers and steamfitters.....	0 70	8
Sheet metal workers.....	0 90	8
Structural ironworkers.....	0 75	8
Driver, team and wagon.....	0 60	8
Driver, horse and cart.....	0 55	8
Concrete mixer operator.....	0 45	8
Truck driver.....		8

#### DEPARTMENT OF PUBLIC WORKS

##### *Contracts in Group "A" (Construction, etc.)*

Filling etc. of site of National Research Laboratory, Ottawa, Ontario. Name of contractors, Messrs. Mahoney & Rich Limited, Ottawa, Ont. Date of contract, December 28, 1931. Amount of contract, approximately \$20,000. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Labourers.....	\$0 45	8
Driver, horse and cart.....	0 70	8
Driver, team and wagon.....	1 00	8

Construction of flooring in public building, Edmonton, Alberta, name of contractor Mr. F. R. Lovette, Edmonton, Alberta, date of contract, December 21, 1931, amount of contract, \$1,891. A fair wages clause was inserted in the contract.

#### Contracts in Group "B" (Interior Fittings etc.)

Construction and installation of interior fittings in the Post Office at Morrisburg, Ontario. Name of contractor, Canadian Office and School Furniture Ltd. of Preston, Ont. Date of contract, January 12, 1932. Amount of contract, \$879. The "B" labour conditions were inserted in the contract.

Construction and installation of interior fittings in Postal Station "D", Vancouver, B.C. Name of contractor, Shockley Construction Co., Ltd., Vancouver, B.C. Date of contract, November 5, 1931. Amount of contract, \$1,000. The "B" labour conditions were inserted in the contract.

Construction and installation of conveying machinery and related equipment in the Post Office, Montreal, P.Q. Name of contractors, Mahaffy Iron Works Limited, Toronto, Ontario. Date of contract, December 30, 1931. Amount of contract, \$6,300. The "B" labour conditions were inserted in the contract.

#### DEPARTMENT OF RAILWAYS AND CANALS

##### Contracts in Group "A" (Construction, etc.)

Placing of an earth fill embankment to form a highway crossing across Welland Canal Feeder at Canal Street West, Dunnville, Ontario. Name of contractor, Mr. Roy Honsberger, Vineland, Ontario. Date of contract, December 10, 1931. Amount of contract, approximately \$1,598. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Common labourer.....	\$0 40	8
Steam shovel engineer.....	1 20	8

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received in the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both the employers and the employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In each agreement or schedule, the rates of wages for the principal classes or labour are given, with other information of general interest.

Construction: Buildings and Structures

TORONTO, ONTARIO.—MARBLE DEALERS AND THE BRICKLAYERS, MASONS AND PLASTERERS INTERNATIONAL UNION, LOCAL No. 31, ONTARIO.

This agreement covers marble setters, members of the above local union. Agreement to be in effect from November 27, 1931, to January 1, 1933. If thirty days' notice is given by either party a meeting of the joint arbitration committee will meet about June 1, 1932, to discuss any changes.

Only union members will be employed, with preference to local men; foremen must also be union members.

Hours: 8 per day, 5 days per week.

Overtime: time and one-half from 5 p.m. to 10 p.m.; after 10 p.m. and all work on legal holidays, double time.

Wages for journeymen marble setters: \$1.15 per hour.

The apprenticeship system as adopted by both parties to the international agreement will be in force.

For work out of the city, fare and board to be paid by employers.

All disputes which cannot be settled between the parties will be referred to the executive officers of the two organizations for settlement. If during the lifetime of the agreement, any change in the changeable parts of the agreement is desired by either party, written notice will be given and the other party will be allowed three months to consider it.

TORONTO, ONTARIO.—CONTRACTING PLASTERERS' ASSOCIATION OF TORONTO AND THE INTERNATIONAL UNION OF PLASTERERS OF AMERICA, LOCAL No. 48.

Agreement to be in effect from December 1, 1931, to April 30, 1933. After receiving notice from either party, the arbitration committee will meet about February 1, 1933 to negotiate a new agreement.

Only local union members will be employed, if available, and the union will give preference in supplying men to employers signing the agreement. Employers will accept orders for union dues when signed by union members.

Foremen must be employed where eight or more plasterers are on a job except where employer directs the job himself. Foremen must be union members.

Hours: 8 per day, 5 days per week. No work on Saturday until 5 p.m. and then only at overtime rates, with the exception that in case of emergency, representatives of both parties may consent to work on Saturdays.

Overtime: time and one-half, including Sundays and holidays.

Wages for journeymen plasterers: \$1.12½ per hour from December 1, 1931, to April 30, 1932, and \$1 per hour from May 1, 1932, to April 30, 1933.

Apprentices are governed by the Ontario Apprenticeship Act. Any firm in business for one year may employ one apprentice who will be indentured for five years. When the first apprentice has entered his third year, another apprentice may be employed.

No union member to tender for work for an owner.

For country work, transportation to be paid by employer.

Where ten or more plasterers are employed, there will be a superannuated man employed.

A joint arbitration committee of five members of each party to be formed to consider any disputes and their decision will be binding. No strike to occur until a dispute has been considered by such arbitration board.

#### **Transportation and Public Utilities:**

##### **Local Transportation**

VANCOUVER, B.C.—A CERTAIN BAKERY AND THE INTERNATIONAL BROTHERHOOD OF TEAMSTERS, CHAUFFEURS, STABLEMEN AND HELPERS, LOCAL No. 189 (BAKERY SALESMEN).

Agreement to be in effect from December 21, 1931, to March 1, 1933, and from year to year

thereafter unless notice of any change is given thirty days before the expiry date in any year. If the parties cannot agree to the changes, they will be submitted to a Board of Arbitration whose majority decision will be final and binding.

Only members of the local union will be employed, or those who will join the union. All employees are to authorize the company to deduct from their wages and pay to the union secretary any dues, fines or assessments levied in accordance with the union by-laws. The union agrees to reimburse the company if any union member should defraud the company of any money.

No work on Sundays or national holidays except to handle emergency orders, and such work will be optional.

All employees with one or more years service will have one week's holiday with pay.

Minimum wage scale: bakery salesmen \$23 per week, route inspectors \$30 per week, but no employee who was receiving higher wages prior to the beginning of this agreement will have his wages reduced. A commission is paid on cake sales. Inexperienced new men will be paid \$20 per week for first four weeks, after which they will receive the regular minimum scale.

One week's notice of discharge or of leaving work.

Any dispute which cannot be settled between the parties will be submitted to an arbitration board consisting of one representative of each party and a third disinterested party whose majority decision will be final and binding.

## **THE COST OF LIVING FOR WORKINGMEN'S FAMILIES IN DETROIT, U.S.A., AND FOURTEEN EUROPEAN CITIES**

The International Labour Office (League of Nations) Geneva, undertook an inquiry into the cost of living for workingmen's families in fourteen European cities as compared with that in Detroit, at the request of the Ford Motor Company. The company wished to consider the possibility of fixing minimum rates of wages in the European factories at such levels that its European employees would have living standards equivalent to those of its Detroit employees living on the minimum rate of \$7 per day. The result of the inquiry was recently published in a report entitled "An International Enquiry into Costs of Living," the sub-title being "A Comparative Study of Workers' Living Costs in Detroit (U.S.A.) and Fourteen European Cities."

The first part of the inquiry was to ascertain how the employees in Detroit lived. This was undertaken by the United States Bureau of Labour Statistics which made a survey early

in 1930 covering a group of 100 families, the husband in each being employed by the Ford Motor Company at, or approximately at, the minimum rate of that Company, \$7 per day, and having worked during the preceding twelve months approximately 250 days. Each of the 100 families consisted of a husband, wife, and two or three children under sixteen years of age. The average expenditure of these families during the year 1929 was \$1,720. The object of the inquiry was to ascertain the exact amount of goods and services obtained for the money spent by the families, as well as the grade, quality, etc., and the cost.

The next step was to ascertain the cost of securing the same goods and services in each of the fourteen cities in Europe in which the Ford Motor Company had, or was contemplating having, establishments. This was done by the International Labour Office with the assistance of the various governmental

were unobtainable in European cities or were not in common use by workingmen. In such cases the question arose as to what was most suitable for securing the same standard of living or of comfort as obtained in Detroit under different conditions, and thus avoid causing a bias in the results.

To show the comparative cost of the Detroit standard of living in European cities, the International Labour Office took the cost of the Detroit budget as 100 and converted the cost in each European city to a percentage of this figure. As the enquiries in the various cities were made at varying dates during 1930 and 1931, the costs were brought to a common basis as of January, 1931, by the use of index numbers of changes in the cost of living.

In order to compare the rates of wages paid in the Ford Motor Company's plants in these cities with what they would be if put on a basis of equality in purchasing power with the minimum rate in Detroit, the United States Bureau of Labour Statistics secured from the Company a statement of the minimum rates in effect in such plants, the result appearing in Table I. This shows not only the relative cost of living on the Detroit standard in these cities, but the wages per hour in August, 1931, and what the hourly rate would be if brought up to the Detroit rate in equivalent purchasing power, daily rates on an eight hour basis being also given.

It will be observed that the costs in the various cities were, in many cases, almost as high as in Detroit, those under 75 per cent being Manchester, England; Rotterdam, Netherlands; Antwerp, Belgium; Warsaw, Poland; Istanbul, Turkey; and Barcelona, Spain.

Table II is a summary by groups of the cost of the budget in Detroit in the year 1929.

## PRICES, RETAIL AND WHOLESALE, IN CANADA, JANUARY, 1932

### Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during the month was downward, both the weekly family budget in terms of retail prices and the Dominion Bureau of Statistics index number of wholesale prices being lower.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average prices in sixty-nine cities was lower at \$7.68 for the beginning of January, as compared with \$7.85 for December, 1931; \$9.86 for January, 1931; \$11.88 for January, 1930; \$11.30 for January, 1929; \$11.03 for January, 1922; \$16.92 for June, 1920 (the peak); and \$7.73 for January, 1914. The most important change was a substantial fall in the price of eggs. The prices of fresh and salt pork, bacon, lard, cheese, evaporated apples and tea were also lower. The prices of beef, butter and potatoes were slightly higher. Including the cost of fuel and rent with that of foods the total budget averaged \$17.59 at the beginning of January as compared with \$17.76 for December, 1931; \$20.21 for January, 1931; \$22.17 for January, 1930; \$21.55 for January, 1929; \$21.52 for January, 1922; \$26.92 for July, 1920 (the peak); and \$14.49 for January, 1914. Fuel and rent were practically unchanged.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was again lower at 69.4 for January as compared with 70.3 for December; 76.7 for January, 1931; 95.3 for January, 1930; 94 for January, 1929; 97.1 for January, 1922; 164.3 for May, 1920 (the peak); 149.4 for January, 1920; and 64.9 for January, 1914. Ninety-nine prices quotations declined, sixty advanced and three hundred and forty-three were unchanged.

In the classification according to chief component materials five of the eight main groups were lower, two were higher and one was unchanged. The groups which declined were: the Animals and their Products group, because of lower prices for steers, cured meats, milk, butter, cheese and eggs, which more than offset higher prices for calves, hogs, lambs and canned salmon; the Wood, Wood Products and Paper group, owing mainly to reduced quotations for maple lumber and sulphite pulp; the Iron and its Products group, chiefly because of lower prices for steel tank plates and automobile body plates; the Non-Metallic Minerals and their Products group, due to declines in the prices of domestic coal, sulphur and building stone; and the Chemicals

and Allied Products group, because of declines in the prices of certain tanning materials and white and red lead. The Vegetables and Vegetable Products group was slightly higher, advances in the prices of oats, rye, oatmeal, rolled oats, coffee and onions more than offset lower prices for flax, barley, wheat, flour, bran and shorts. The Non-Ferrous Metals and their Products group was also higher, due to advances in the prices of tin, copper and copper wire, which more than offset lower prices for aluminium, lead and silver; the Fibres, Textiles and Textile Products group was unchanged, advances in the prices of certain manufactured cottons and silk thread offset declines in the prices of raw jute, raw silk, raw wool and woollen blankets.

In the grouping according to purpose both consumers' goods and producers' goods were lower, the former because of lower prices for flour, bran, shorts, fresh and cured meats, milk, cheese, butter and eggs, which more than offset higher prices for coffee, dried fruit, oatmeal, rolled oats and onions, and the latter because of declines in the prices of wheat, barley, bran, shorts, steers, newsprint and maple lumber, which more than offset advances in the prices of rye, calves, hogs, lambs, silk thread, electrolytic copper and tin.

In the grouping according to origin raw and partly manufactured goods were lower, mainly because of reduced quotations for wheat, steers, eggs, milk, raw wool, aluminium and silver. Fully and chiefly manufactured goods also declined, lower prices for flour, bran, shorts, cured meats, cheese, woollen blankets and newsprint more than counterbalancing advances in the prices of rolled oats, oatmeal, copper wire bars, copper wire and silk thread. Domestic farm products, articles of marine origin, articles of forest origin and articles of mineral origin were lower.

### EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of January, of seventy-one staple foodstuffs, groceries, coal, wood, and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quantity for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city except

(Continued on page 230)

**COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL, AND LIGHTING, AND RENT IN TERMS OF THE AVERAGE PRICES IN SIXTY-NINE CITIES IN CANADA**

The budget is intended to show the changes in the cost of the items included, not to show the minimum cost for an average family

\*Prior to 1926 number of commodities was 236.

(Continued from page 222)

milk and bread are the average of quotations reported to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of milk, bread and fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. At times when the price of an

\*The figures for "all items" were calculated by giving the following weights to each group: Food, 35%; Fuel, 8%; Rent, 18%; Clothing, 18%; Sundries, 20%.

article heavily weighted for this purpose rises or falls (abnormally) the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climate conditions, nor for the differences in the heating value of the various fuels. It was estimated when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

Index Numbers of Changes in the Cost of  
Living

In March, 1921, the Department published in the LABOUR GAZETTE a table of percentages of changes in the cost of living since 1913 as a tentative cost of living index number, using the figures of the above-mentioned budget for the calculation for food, fuel and rent, with preliminary figures for clothing and sundries added and this table has been brought down to date at intervals since. The calculation of a comprehensive cost of living index number covering all items of workingmen's family expenditure in progress since 1918 had been sufficiently advanced to enable the publication of preliminary figures by groups in a supplement to the LABOUR GAZETTE, January, 1926, on Prices in Canada and in Other Countries, page 9. This table gave figures for June and December each year from 1914 to 1926, inclusive. Figures have since been given for March and September each year since 1917 and the accompanying table gives figures for December each year from 1914 to 1919, quarterly from 1920 to 1929 and monthly since January, 1930. As stated in the above-mentioned supplement, the figures in the food group in the family budget are still used to show the changes in food prices but in the

other groups the percentage changes in the prices of each article have been weighted according to workmen's average family consumption, and in the fuel and light groups gas and electricity have been included.

### Cost of Electric Current and Gas for Householders

With rates in 1913 as 100, index numbers of electric light rates were 1900, 141.4, 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.3; 1916, 86.3; 1917, 84.6; 1918, 82.9; 1919, 81.6; 1920, 81.1; 1921, 81.4; 1922, 80.1; 1923, 77.7; 1924, 76.5; 1925, 73.8; 1926, 73.2; 1927, 70.9; 1928, 69.3; 1929, 67.4; 1930, 64.7; 1931, 64.1.

The above figures were arrived at by converting to the base of 1913 as 100, an index number of electric current costs from 1900 to 1913 constructed for the Board of Inquiry into the cost of living in Canada, 1913-15 (Report Vol. 2, page 318), and bringing the figures down to 1930. The figures are unweighted. The Dominion Bureau of Statistics has issued an index number of electric current rates for household consumption on the basis of figures in 1926 as 100, as follows: 1923, 108.3; 1924, 105.1; 1925, 101.7; 1926, 100.0; 1927, 99.0; 1928, 97.1; 1929, 94.6; 1930, 92.3.

The following are index numbers of rates for manufactured and natural gas for the years 1913 to 1928 issued by the Dominion Bureau of Statistics: Manufactured gas, 1913, 100; 1914, 98.3; 1915, 98.1; 1916, 96.3; 1917, 100.7; 1918, 107.4; 1919, 111.1; 1920, 125.4; 1921, 143.6; 1922, 140.6; 1923, 135.7; 1924, 134.6; 1925, 131.6; 1926, 131.1; 1927, 128.9; 1928, 128.5; 1929, 128.0; 1930, 127.6. Natural gas, 1913, 100; 1914, 107.0; 1915, 112.5; 1916, 112.5; 1917, 113.9; 1918, 114.0; 1919, 116.1; 1920, 125.1; 1921, 137.6; 1922, 163.2; 1923, 163.0; 1924, 162.2; 1925, 179.3; 1926, 172.4; 1927, 166.9; 1928, 158.9; 1929, 159.1; 1930, 158.8. For the years 1900 to 1913 two index numbers of gas costs calculated for the Cost of Living Inquiry in 1914-15, have been averaged and converted to the base of 1913 as 100, as follows: 1900, 125.8; 1901, 125.8; 1902, 125.8; 1903, 125.2; 1904, 123.9; 1905, 120.1; 1906, 107.5; 1907, 108.8; 1908, 106.9; 1909, 105.7; 1910, 103.8; 1911, 99.4; 1912, 106.6; 1913, 100.0.

### Retail Prices

Beef prices showed little change during the month, sirloin steak averaging 25.1 cents per pound in January as compared with 25 cents in December; rib roast averaging 19 cents per pound as compared with 18.9 cents; and shoulder roast 13.4 cents per pound as com-

pared with 13.3 cents. Veal was down from an average price of 16 cents per pound in December to 15.4 cents in January. The price in January, 1931, was 22 cents per pound. Mutton prices averaged slightly higher at 22.1 cents per pound as compared with 21.9 cents in December. Both fresh and salt pork were considerably lower, the former declining in the average from 16.6 cents per pound in December to 15.9 cents in January, and the latter from 18 cents per pound to 17.2 cents. The price in January, 1931, was 25.9 cents per pound for fresh and 26.3 cents for salt. Breakfast bacon was also lower in most localities, the price being down in the average from 26.2 cents per pound in December to 24.5 cents in January. Boiled ham was also generally lower at an average price of 39.6 cents per pound in January as compared with 42.5 cents in December and 57 cents in January, 1931. Lard was down in the average from 13 cents per pound to 12.8 cents.

Eggs were substantially lower in most localities, fresh being down in the average 49.5 cents per dozen in December to 41.8 cents in January and cooking from 36.7 cents per dozen in December to 32.6 cents in January. Prices in January, 1931, were 50.5 cents per dozen for fresh eggs and 40.1 cents for cooking. Milk was slightly lower at an average price of 10.5 cents per quart. Decreases were reported from Hull, Ottawa, Brantford, Galt, Regina, Trail and Victoria. Both dairy and creamery butter were slightly higher in the average, the former being up from 23.7 cents per pound in December to 24.4 cents in January and the latter from 27.2 cents per pound to 27.5 cents. Cheese was slightly lower at an average price of 22.2 cents per pound as compared with 22.5 cents in December and 29.2 cents in January, 1931.

Bread was unchanged at an average price of 6 cents per pound. Canned vegetables were again lower, tomatoes averaging 10.7 cents per tin as compared with 11.1 cents in December and 14.3 cents in January, 1931, peas averaging 10.7 cents per tin as compared with 10.9 cents in December and 13 cents in January, 1931, and corn averaging 11.5 cents per tin as compared with 11.8 cents in December and 15 cents in January, 1931. Potatoes were slightly higher at an average price of 72.6 cents per ninety pounds in January as compared with 69.8 cents in December and \$1.25 in January, 1931. Granulated sugar was slightly lower at an average price of 6.1 cents per pound. Anthracite coal was little changed at an average price of \$16.19 per ton. Coke was up in the average from \$12.26 per ton in December to \$12.25 in January. No changes were reported in rent.

### Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

Grain prices showed little change during the month. Quotations for the most part however averaged slightly lower than in December. No. 1 Manitoba northern cash wheat, Fort William and Port Arthur basis, was down from 60·6 cents per bushel in December to 60 cents in January. The high price for the month was 61½ cents per bushel and the low 58½. In coarse grains western barley was down from an average price of 38·4 cents per bushel to 37·7 cents, western oats from 30 cents per bushel to 29·4 cents and flax from 98·9 cents per bushel to 98·5 cents. Rye was slightly higher, averaging 43·6 cents per bushel as compared with 42·6 cents in December. Flour at Toronto was unchanged at \$5.03 per barrel, while rolled oats advanced from \$2.50 per ninety pound bag to \$2.65. Raw sugar at New York was slightly lower at \$1.35 per cwt. Granulated sugar at Montreal has remained unchanged for some months at \$4.56 per cwt. Santos coffee at Toronto advanced from 15·5 cents per pound to 17 cents. In livestock, good steers at Toronto were down from \$6.04 per hundred pounds to \$5.89, while veal calves at Toronto advanced from \$7.39 per hundred pounds to \$7.81 and at Winnipeg from \$6.23 per hundred pounds to \$6.86.

Lambs at Toronto advanced from \$6.38 per hundred pounds to \$7.07 and at Montreal from \$6.40 per hundred pounds to \$6.69. Bacon hogs at Toronto also were higher at \$5.14 per hundred pounds as compared with \$4.81 in December. Eggs were substantially lower, fresh being down at Montreal from 45·6 cents per dozen to 31·3 cents and at Toronto from 40·9 cents per dozen to 28·8 cents. Raw cotton at New York advanced from 7·6 cents per pound to 7·8 cents. The higher price was said to be due mainly to a better demand from the Orient for American cotton which was said to be replacing that from India. The decline in raw silk continued, the price at New York being down from \$3.16 per pound to \$2.90 (Canadian funds). Newsprint paper was down from \$2.51 per hundred pounds in car lots to \$2.31. In iron and steel, automobile body plates declined from \$3.72 per hundred pounds to \$3.44 and steel tank plates from \$1.92-\$1.98 per hundred pounds to \$1.78-\$1.90, quoted in Canadian funds. In non-ferrous metals, electrolytic copper at Montreal advanced from \$9.45 per hundred pounds to \$9.75, copper wire bars from \$8.37 per hundred pounds to \$8.89, and copper wire from 12·3 cents per pound to 13·5 cents. Tin at Toronto was ½ cent per pound higher at 30 cents. Western domestic coal was down from \$4.20 per ton at Drumheller to \$4 and from \$3.50 per ton at Edmonton to \$3.25.

### PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes give the latest information available as to the movements of prices in Great Britain and certain other countries. The index numbers of the cost of living are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases. The latest table showing cost of living and wholesale prices index numbers for various countries appeared in "Prices in Canada and Other Countries, 1931," issued as a supplement to the LABOUR GAZETTE, January, 1931.

#### Great Britain

WHOLESALE PRICES.—The Board of Trade index number, on the base 1924 = 100, was 63·7 for December, a decline of 0·5 per cent for the month. With the exception of increases in metals and minerals other than coal, all groups were included in the decline except that there was no change in the miscellaneous non-foods group.

The Statist index number on the base 1867-1877 = 100, was 85·4 at the end of December,

an increase of 2·9 per cent for the month. Every group was included in the general advance, but the food groups showed the greatest advances.

COST OF LIVING.—The *Ministry of Labour Gazette* index number, on the base July, 1914 = 100, was 147 at January 1, a decline of 0·7 per cent for the month due to a decrease in the food group. There was a seasonal reduction in the prices of eggs, partly offset by increases in the prices of potatoes.

#### Germany

WHOLESALE PRICES.—The index number of the Federal Statistical Office, on the base 1913 = 100, was 103·7 for December, a decline of 2·7 per cent for the month. Every one of the 16 groups were included in the decline.

COST OF LIVING.—The index number of the Federal Statistical Office, on the base 1913-1914 = 100, was 130·4 for December, a fall of 1·1 per cent for the month. There was no change in rent, but all other groups were lower than for November.

### Italy

**WHOLESALE PRICES.**—The index number of the Milan Chamber of Commerce, on the base 1913 = 100 (pre-war currency), was 86·8 for December, a decline of 1·9 per cent for the month. Increases were noted in construction materials and miscellaneous vegetable products, but all other groups showed declines.

**COST OF LIVING.**—The index number of the cost of living, Milan, on the base June, 1927 = 100, was 80·66 for November, an advance of 0·1 per cent for the month. There was a slight advance in the food group.

### New Zealand

**WHOLESALE PRICES.**—The index number of the Census and Statistics Office, on the base 1909-1913 = 1000, was 1384 for November, a decline of 0·1 per cent for the month. With the exception of a small increase in foodstuffs of vegetable origin and wood and wood products, all groups were lower than in October.

### United States

**WHOLESALE PRICES.**—The Bureau of Labour Statistics index number, on the base 1926 = 100, was 68·6 for December, a decline of 2·3 per cent for the month. Nine of the ten

groups were included in the downward movement, while the tenth, chemicals and drugs, was unchanged.

*Bradstreet's* index number, which is the sums total of the prices per pound of 96 commodities of common consumption, was \$7·5243 at February 1, a decline of 2·7 per cent for the month. This is the lowest index number recorded since July, 1901. The only group showing an advance over the previous month was breadstuffs; declines were noted in live-stock, provisions, fruits, hides and leather, textiles, metals, oils, naval stores and miscellaneous commodities; there were no changes in coal and coke, building materials and chemicals and drugs.

*Dun's* index number of wholesale commodity quotations proportioned to the *per capita* consumption of each of the many articles included was \$140·344, a fall of 0·24 per cent for the month. There were decreases in breadstuffs, meat, "other food," and clothing, while increases were noted in dairy and garden produce, metals and miscellaneous commodities.

**COST OF LIVING.**—The index number of the National Industrial Conference Board, on the base 1923 = 100, was 83·1 for December, a fall of one per cent for the month. Slight declines were recorded in all groups.

### Amendment of Criminal Code Proposed by United Farmers of Alberta

The United Farmers of Alberta, at their 24th annual convention, held last month at Edmonton, unanimously adopted a resolution asking Parliament to repeal the sections of the Criminal Code which were enacted in 1919 in regard to the crime of sedition. The resolution proposed that the following qualifying section should be added to the Code:—

"No one shall be deemed to have a seditious intention only because he intends in good faith (a) to show that His Majesty has been misled or mistaken in his measures; or (b) to point out errors or defects in the government or constitution of the United Kingdom or of any part of it, or of Canada, or of any province thereof, or in either House of Parliament of the United Kingdom, or of Canada, or in any legislation, or in the administration of justice; or to excite His Majesty's subjects to attempt to procure by lawful means the alteration of any matter in the state; or (c) To point out, in order to their removal, matters which are producing or have a tendency to produce feelings of hatred and ill-will between different classes of His Majesty's subjects.

### "Master Farmers of Canada"

The "Master Farmer" movement, which originated in the United States in 1925, was introduced in Canada in 1929 through the agency of the *Nor-West Farmer*, a farm journal of Winnipeg, which recently published a souvenir booklet on this subject. The new "order" is intended to serve as a means for honouring farmers who have achieved distinction as farmers, home-builders and citizens. Gold medals are awarded to farmers elected for the honour, the selections being made from a list of persons whose names are submitted, not by themselves, but by their neighbours. The selection committee consists of the Minister or Deputy Minister of Agriculture of each of the four western provinces, professors of agriculture and other prominent authorities in each province, the editor of the *Nor-West Farmer* acting on the four committees. Investigations are made as to the farming activities of each person who is nominated, his home, the education and training of his children, and his contribution to the life of the community in which he resides. There are now sixteen "master farmers" in Canada, five being in Manitoba, five in Saskatchewan, four in Alberta, and two in British Columbia.

## FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FOURTH QUARTER OF 1931

THE number of fatal industrial accidents (including fatalities from industrial diseases reported by workmen's compensation boards, etc., along with fatal accidents, as well as fatalities to persons incidental to the pursuit of their occupations) which were recorded in the Department as occurring during the fourth quarter of 1931, was 246, there being 101 in October, 83 in November and 62 in December.

The report for the third quarter of 1931 was given in the LABOUR GAZETTE, November, page 1269. In the fourth quarter of 1930, 292 fatal accidents were recorded (LABOUR GAZETTE, February, 1931, page 251). The supplementary lists of fatal industrial accidents on page 241 contains three fatalities for 1930 and 59 for the first three quarters of 1931. In this series of reports it is the custom to record industrial accidents under the dates of their occurrence, and fatal industrial diseases under the dates on which they prove fatal.

Reports were received from the provincial workmen's compensation boards, the Board of Railway Commissioners of Canada, from certain other official sources and from the correspondents of the LABOUR GAZETTE. Information as to accidents is also secured from newspapers.

Classified by groups of industries the fatalities occurring during the fourth quarter of 1931 were as follows: agriculture, 36; logging, 11; fishing and trapping, 13; mining, non-ferrous smelting and quarrying, 43; manufacturing, 22; construction, 49; electric light and power, 5; transportation and public utilities, 49; trade, 5; service, 13.

Of the mining accidents, 16 were in "metalliferous mining," 23 in "coal mining," 2 in "non-metallic mineral mining and quarrying, n.e.s.," and 2 in "structural materials."

Of the accidents in manufacturing, 8 were in "vegetable foods, drink and tobacco," 5 in "saw and planning mill products," 1 in "wood products," 1 in "pulp, paper and paper products," 1 in "printing and publishing," 3 in "iron, steel and products," and 3 in "non-metallic mineral products."

In construction there were 9 fatalities in "buildings and structures," 1 in "railway," 30 in "highway and bridge," and 9 in "miscellaneous construction."

In transportation and public utilities there were 13 fatalities in "steam railways," 2 in "street and electric railways," 20 in "water transportation," 12 in "local transportation,"

1 in "storage" and 1 in "telegraphs and telephones."

In trade there were 2 fatalities in "wholesale," and 3 in "retail."

Of the fatalities in service, 4 were in "public administration," 1 in "recreational," 4 in "custom and repair," 2 in "personal and domestic," and 2 in "professional establishments."

There was no serious disaster resulting in the loss of a very large number of lives during the period under review. Accidents involving the loss of two or more lives were as follows:

On October 8, two fishermen were drowned near Prince Rupert, B.C., when their boat struck a rock and foundered; and two fishermen were drowned in Lake Manitoba, Manitoba, on November 17, when their boat was swamped in heavy waves. On November 12, two hunters were drowned near Michomis, Quebec, when their canoe capsized.

On November 2, two miners at Froot, Ontario, were hurled 475 feet down a shaft when the cage jammed. On October 2, two coal miners were crushed under falling rock at Glace Bay, N.S.

Five labourers engaged in highway and bridge construction near Pierreville, Quebec, were buried under a landslide of earth at an excavation on November 9.

When a schooner foundered and sank on October 17, off Bonaventure Island, Gaspé, Quebec, the captain and the cook were drowned.

On November 29, a ship captain and a steamship lines manager lost their lives in a collision of a train with their car at Port Arthur, Ontario.

*Supplementary Lists of Accidents.*—The supplementary list of accidents occurring during the first three quarters of 1931, to be found after the main table of accidents, contains 59 fatalities, of which 5 were in agriculture, 4 in fishing and trapping, 4 in mining, non-ferrous smelting and quarrying, 9 in manufacturing, 19 in construction, 2 in electric light and power, 9 in transportation and public utilities, 3 in trade and 4 in service. One of these accidents occurred in January, 3 in April, 3 in May, 8 in June, 8 in July, 16 in August and 20 in September.

Concluding the lists is a supplementary list of accidents occurring during 1930. This includes 3 fatalities, of which 1 was in construction and 2 in transportation and public utilities. Two of these accidents occurred in October and one in November.

## FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FOURTH QUARTER OF 1931

Trade or Industry	Locality	Date	Age	Cause of Fatality
<b>AGRICULTURE AND STOCK-RAISING—</b>				
Farmer's son.....	Near St. Clements, Ont.....	Oct. 8	16	Struck by piece of fly-wheel of circular saw when it exploded.
Farmer.....	Near Turner Valley, Alta...	" 12	.....	Hay rack on which he was riding was struck by auto.
Farmer.....	Near Westlock, Alta.....	" 16	43	Run over while attempting to stop runaway team
Farm hand.....	Near Brookings, Sask.....	" 17	26	Overcome by gas while cleaning well.
Farmer.....	Near Edmonton, Alta.....	" 17	61	Struck by car when it frightened horse he was leading.
Farmer.....	Near Pincher Creek, Alta...	" 19	25	Injured when grain tank fell from wagon on steep hill.
Farmer.....	Starbuk, Man.....	" 20	20	Pinned under harrows when they upset.
Farmer.....	Ste. Sophie, Que.....	" 21	34	Kicked by horse. Died Oct. 24.
Farmer.....	Near Gold Springs, Alta.....	" 24	.....	Fell from his wagon and was run over.
Farmer.....	Near McLennan, Alta.....	" 26	24	Pinned beneath truck.
Farm hand.....	Near Drayton, Ont.....	" 26	72	Fell over tongue of wagon. Died Oct. 27.
Farmer.....	Near Kitchener, Ont.....	" 27	.....	Gored by bull.
Farmer's son.....	St. Gervais, Que.....	" 29	17	Struck by log falling from cart.
Farmer.....	Near Nairn Centre, Ont.....	Nov. 2	29	Shot in mistake for moose.
Thresher.....	Kettleby, Ont.....	" 3	25	Fell from door of barn. Died Nov. 4.
Market gardener.....	Fort Garry, Man.....	" 3	60	Collision of switch engine with his truck.
Farmer.....	Nolan's Corners, Ont.....	" 5	.....	Accidental discharge of his gun.
Rancher's son.....	Horsefly River, B.C.....	" 11	17	Broke through ice and was drowned.
Farm hand.....	Near Brockville, Ont.....	" 12	27	Mangled by faulty charge while blasting rocks. Died Nov. 16.
Farmer.....	Near Souris, Man.....	" 12	35	Kicked by horse. Died Nov. 14.
Farm hand.....	Near Bishop's Mills, Ont.....	" 12	27	Injured while blasting rock. Died Nov. 15.
Rancher.....	Near Westbank, B.C.....	" 14	about 45	Killed while blasting stumps.
Farmer.....	Near Wingham, Ont.....	" 23	.....	Fell from his wagon.
Farmer.....	Near Chatham, Ont.....	Nov. 25	49	Injured when his team ran away. Died [Dec. 24.
Farmer.....	Prince George, B.C.....	about Nov. 25	.....	Fell from load of wood and dragged by team.
Farmer.....	Turner Valley, Alta.....	" 29	.....	Tree fell on him.
Farmer.....	Summit, Ont.....	Dec. 3	68	Fell from wagon.
Farmer.....	Canora, Sask.....	" 4	25	Train struck his wagon. Died Dec. 5.
Farmer.....	Near Lanark, Ont.....	" 5	76	Attacked by bull.
Farmer.....	Near Westlock, Alta.....	" 8	57	Injured when auto struck his sleigh. Died Dec. 12
Farm hand.....	Near Wishart, Sask.....	" 9	21	Buried by cave-in of well.
Farmer.....	Near Hamilton, Ont.....	" 10	.....	Fell on buzz-saw.
Farmer.....	Near Cargill, Ont.....	" 10	28	Crushed under log.
Teamster.....	Fredericton, N.B.....	" 11	.....	Train struck his hay-laden wagon.
Farmer.....	Near Capreol, Ont.....	about Dec. 14	67	Injured when his team ran away. Died Dec. 15.
Farmer.....	Near Pense, Sask.....	Dec. 15	30	Thrown against tractor when sleeve caught in belt.
<b>LOGGING—</b>				
Chaser.....	Half-Way River, B.C.....	Oct. 1	24	Struck by sky line when it broke.
Rigging Slinger.....	Bloedel, B.C.....	" 6	30	Struck by sapling.
Logger.....	Cartwright Bay, B.C.....	" 6	29	Slipped and fell 30 feet.
Teamster.....	Preston Township, Ont.....	" 9	21	Struck by falling tree.
Logger.....	Kitsaway Island, B.C.....	" 17	53	Struck by falling tree.
Logger.....	Gambier Island, B.C.....	Nov. 3	58	Struck by falling tree.
Logger.....	Bute Inlet, B.C.....	" 7	45	Struck by log when it jumped chute.
Faller.....	Near Laval, Que.....	" 8	30	Struck by falling branch.
Farmer's son.....	Lac Ste. Marie, Que.....	" 14	14	Crushed under logs falling from wagon.
Labourer.....	Algonquin Park, Ont.....	Dec. 1	.....	Struck by falling tree, fractured skull.
Logger.....	Near Likely, B.C.....	about Dec. 21	45	Tree fell on him.
<b>FISHING AND TRAPPING—</b>				
Fisherman.....	Fraser River, B.C.....	Oct. 1	22	Fell from scow and was drowned.
Fisherman.....	Petit Rocher, N.B.....	" 5	25	Struck by lightning.
Fisherman.....	Near Prince Rupert, B.C.....	" 8	.....	Drowned when their boat struck a rock and foundered.
Fisherman.....	East Tracadie, P.E.I.....	" 28	.....	Drowned from motor boat when it foundered.
Fisherman.....	Saint John, N.B.....	Nov. 5	44	Fell from motor boat and was drowned.
Hunter.....	Near Michomis, Que.....	" 12	34	Drowned when canoe capsized.
Hunter.....	.....	" 12	30	.....
Fisherman.....	Lake Manitoba, Man.....	" 17	20	Drowned when boat swamped in heavy waves.
Fisherman.....	.....	" 21	21	.....
Cook for trappers.....	Cold Lake.....	" 18	.....	Fell from wagon. Died Nov. 19.
Trapper.....	Near St. Honore, Que.....	Dec. 4	.....	Drowned when sled broke through ice.
Trapper.....	Lac Outatchiway, Que.....	about Dec. 5	19	Broke through ice and was drowned.

# FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FOURTH QUARTER OF 1931—Continued

Trade or Industry	Locality	Date	Age	Cause of Fatality
<b>MINING, NON-FERROUS, SMELTING AND QUARRYING—</b>				
<i>Metalliferous Mining—</i>				
Foreman.....	Timmins, Ont.....	Oct. 1	48	Silicosis. First laid off April 30, 1929.
Miner.....	Near Sault Ste. Marie, Ont.....	" 3	36	Caught in machine belt.
Scaler.....	Timmins, Ont.....	" 6	43	Silicosis. First laid off Aug. 23, 1926.
Trimmer.....	Frood Mine, Ont.....	" 6	34	Crushed by fall of rock.
Miner.....	Lac du Bonnet, Man.....	" 11	31	Gassed in mine.
Miner.....	South Porcupine, Ont.....	" 13	.....	Silicosis. First laid off Aug. 19, 1928.
Chuteman.....	Kimberley, B.C.....	" 14	33	Fell 300 feet down chute.
Electrician.....	Anyox, B.C.....	" 30	43	Fell down stope. Died Nov. 5.
Miner.....	Frood, Ont.....	Nov. 2	35	Hurled 475 feet down shaft when cage jammed.
Miner.....	.....	.....	29	.....
Skipman.....	Kirkland Lake, Ont.....	" 13	35	Fell 80 feet down stope.
Miner.....	Ross Lake, Man.....	" 14	39	Broke through ice and was drowned.
Miner.....	Howey Mine, Ont.....	" 16	30	Struck on head by falling rock.
Miner.....	Timmins, Ont.....	" 30	34	Silicosis. First laid off Jan. 28, 1929.
Motorman.....	.....	Dec. 2	26	Fell 200 feet down stope.
Mucker.....	Flin Flon, Man.....	" 21	50	Struck by falling tree.
Miner.....	Williams Lake, B.C.....	.....	.....	.....
<i>Coal Mining—</i>				
Miner.....	Clover Bar, Alta.....	Oct. 1	37	Crushed between timber and car. Died Dec. 13.
Miner.....	Glace Bay, N.S.....	" 2	48	Crushed under falling rock.
Miner.....	.....	.....	18	.....
Miner.....	East Coulee, Alta.....	" 6	39	Crushed by falling rock.
Miner.....	Nanaimo, B.C.....	" 8	33	Crushed by fall of rock.
Miner.....	New Waterford, N.S.....	" 19	43	Crushed under fall of stone.
Miner.....	Wayne, Alta.....	" 19	40	Injured by rock slide.
Miner.....	Near Lethbridge, Alta.....	" 26	.....	Crushed in mine shaft.
Coal trimmer.....	Sydney, N.S.....	Nov. 3	61	Slipped and fell between pier and steamer and was drowned.
Miner.....	Near Viceroy, Sask.....	" 10	21	Smothered by cave-in of earth in mine.
Miner.....	Mountain Park, Alta.....	" 12	53	Caught between car and timber. Died Nov. 13.
Miner.....	Near Daysland, Alta.....	" 12	20	Crushed under falling rock.
Miner.....	Near Minto, N.B.....	" 16	56	Crushed by falling mud and rock.
Miner.....	Glace Bay, N.S.....	" 17	37	Crushed by fall of coal.
Miner.....	New Waterford, N.S.....	" 17	30	Crushed between coal box and prop.
Mine driver.....	Midlandvale, Alta.....	" 24	27	Crushed when he fell off loaded car.
Mine driver.....	Drumheller, Alta.....	" 26	24	Struck by falling timber in mine. Died Nov. 29.
Miner.....	Princeton, B.C.....	" 29	28	Crushed between cars and roof. Died Dec. 7.
Miner.....	Near Taber, Alta.....	Dec. 2	25	Crushed under fall of rock.
Miner.....	Near Bassano, Alta.....	" 5	23	Crushed by fall of rock.
Timberman.....	Cumberland, B.C.....	" 11	39	Run over by trip of cars.
Miner.....	Sydney Mines Dist., N.S.....	" 14	28	Fell from face of mine.
Carpenter.....	Springhill, N.S.....	" 23	54	Crushed between two cars.
<i>Non-Metallic Mineral Mining and Quarrying (n.e.s.)—</i>				
Miner.....	Broughton, Que.....	Dec. 2	53	Buried under cave-in of earth in asbestos mine.
Driller.....	Granite Falls, B.C.....	" 29	26	Struck by sliding rock.
<i>Structural materials—</i>				
Gravel pit worker.....	Near Peterborough, Ont.....	Nov. 9	25	Crushed in elevator shaft.
Quarry worker.....	Stonewall, Man.....	" 12	52	Run over by railway truck at quarry.
<b>MANUFACTURING—</b>				
<i>Vegetable Foods, Drink and Tobacco—</i>				
Head miller.....	Eganville, Ont.....	Oct. 8	34	Electrocuted.
Mill worker.....	.....	.....	30	.....
Worker with Dehydrating Co.	Vernon, B.C.....	" 26	21	Crushed and smothered by apples when bin above him collapsed.
Truck driver for flour mill.	Preeceville, Sask.....	Nov. 7	37	Truck overturned. Died Nov. 8.
Truck driver for flour mill.	London, Ont.....	" 25	.....	Train struck his truck.
Worker with flour mills company.	Eden, Man.....	Nov. 27	53	Clothing became caught in elevator shaft.
Asst. millwright.....	Near Fort William, Ont.....	Dec. 13	28	Fell into river and was drowned.
Worker at chopping mill.	Drumwich, Ont.....	" 25	50	Drowned while clearing logs from sluices.
<i>Saw and Planing Mill Products—</i>				
Mill worker.....	Ste. Luc de Matane, Que.....	Oct. 15	17	Drawn into circular saw when glove became caught in hook.
Saw operator.....	Marlboro, Alta.....	" 21	33	Struck on head by slab hurled from saw.
Lumber piler.....	Great Central Lakes, B.C.....	" 24	58	Fell from lumber pile.
Mill worker.....	Vernon, B.C.....	Nov. 4	44	Struck by log falling from truck.
Saw operator.....	Southampton, Ont.....	" 7	.....	Struck by pieces of circular saw when it broke.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FOURTH QUARTER  
OF 1931—Continued

Trade or Industry	Locality	Date	Age	Cause of Fatality
<b>MANUFACTURING—Con.</b>				
<i>Wood Products—</i>				
Box maker.....	Winnipeg, Man.....	Dec. 10	19	Injured when sleeve caught in gear. Died, Dec. 26.
<i>Pulp, Paper and Paper Products—</i>				
Mill worker.....	La Tuque, Que.....	Oct. 22	22	Fell 20 feet from swinging post to cement floor.
<i>Printing and Publishing—</i>				
Wet machine operator.	Three Rivers, Que.....	" 27	19	Hand caught in rolls of machine. Died Nov. 5.
<i>Iron, Steel and Products—</i>				
Helper.....	Toronto, Ont.....	" 22	28	Injured when leg caught under steel plate. Died Nov. 17.
Carpenter.....	Lachine, Que.....	Nov. 21	45	Crushed beneath truck of freight car.
Foundry worker....	Winnipeg, Man.....	Dec. 11	46	Caught in machinery belt.
<i>Non-Metallic Mineral Products—</i>				
Manager at oil plant.	Winnipeg, Man.....	Oct. 30	31	Explosion at plant. Died Nov. 1.
Foreman at brick plant.	Boischatel, Que.....	Nov. 28	47	Struck on head by belt when it broke. Died Nov. 29.
Teamster for gas company.	Toronto, Ont.....	Dec. 3	43	Thrown under wheels of coal wagon when horse bolted. Died Dec. 5.

## RECENT LEGAL DECISIONS AFFECTING LABOUR

### Status of Compensation Board in Claims on Bankrupt Estate

The question arose in the British Columbia Courts whether debts of a bankrupt estate to the Workmen's Compensation Board on assessment dues had a priority in the distribution of the assets of the debtor. Claim for priority was made by the holder of a blanket mortgage on the property of the bankrupt, but the Board disputed this claim, alleging that section 46 of the Workmen's Compensation Act conferred priority on the Board. Section 46 reads as follows:—

46. Notwithstanding anything contained in any other Act, the amount due to the Board by an employer upon any assessment made under this Act, or in respect of any amount which the employer is required to pay to the Board under any of its provisions, or upon any judgment therefor, shall have priority over all liens, charges, or mortgages of every person, whenever created or to be created, with respect to the property, real, personal, or mixed, used in or in connection with or produced in or by the industry with respect to which the employer was assessed or the amount became payable, excepting liens for wages due to workmen by their employer.

In the Court of first hearing Judge D. A. McDonald held that under section 46 (above), coupled with section 125 of the Bankruptcy Act (Revised Statutes of Canada, 1927, chapter 11) the Board was entitled to priority over the plaintiff. Section 125 of the Bankruptcy Act reads as follows:—

125. Nothing in the four last preceding sections shall interfere with the collection of any taxes, rates, or assessments payable by or levied or imposed upon the debtor or upon any property of the debtor under any law of the Dominion, or of the province wherein such property is situate, or in which the debtor resides, nor prejudice or affect any lien or charge in respect of such property created by any such laws.

Moreover, section 121 of the Bankruptcy Act provides that—

In the distribution of the property of the bankrupt or authorized assignor, there shall be paid in the following order of priority:—(The first and second subsections omitted).

Thirdly, all wages, salaries, commissions or compensation of any clerk, servant, travelling salesman, labourer or workman in respect of services rendered to the bankrupt or assignor during three months before the date of the receiving order or assignment and all indebtedness of the bankrupt or authorized assignor under any Workmen's Compensation Act.

The Court of Appeal allowed the plaintiffs appeal against the foregoing decision, Mr. Justice McPhillips dissenting.

Mr. Justice M. A. MacDonald stated that in August, 1930, a quantity of logs belonging to the bankrupt company were destroyed by fire and the proceeds of insurance (\$29,404.24)

were paid to the Canadian Credit Men's Trust Association Limited, trustee in bankruptcy of the property of the company. Appellant as trustee for the bond holders claims payment of this sum (less \$15,000 admittedly due to one Ingham) under its debenture mortgage.

"The respondent, the Workmen's Compensation Board, contests appellant's claim to the extent of \$11,974.17, the amount due it by the company for unpaid assessments and medical aid dues imposed under the provisions of the Workmen's Compensation Act. The learned trial Judge who tried an issue directed held that by reason of section 46 of the Workmen's Compensation Act and section 125 of the Bankruptcy Act, R.S.C., 1927, chapter 11, respondent was entitled to priority over appellant's charge.

"The outcome turns solely on the interpretation of section 46. It does not provide that the amount due for assessments shall be a first charge or lien on the property, as e.g., in the Nova Scotia Act (R.S.N.S., 1923, vol. 2, ch. 129, sec. 9, subsec. 2). A statutory charge against property must be created in precise terms. It gives merely a right of priority (it is not a secured creditor) over liens, charges or mortgages, etc., held by others. As to the nature of the charge created by the debenture mortgage the view of the learned trial judge that 'the floating charge crystallized into a specific charge on the date when bankruptcy occurred and the priorities must be ascertained as at that date and with that fact in view' was not, I think, questioned. When that event occurred the equitable charge created by a floating security became a fixed charge. As of that date therefore we have a contest between the holders of a registered charge or mortgage and a creditor. The amount due respondent for assessments is treated as a debt under other sections of the Act and summary proceedings may be taken to enforce it (secs. 37-40) not for the realization of a charge or for an order for the sale of the property but for the collection of a debt. It is 'an amount due the Board' for an 'amount which the employer is required to pay to the Board.'" Sec. 46.

As to the Bankruptcy Act his Lordship held that section 121 deals with the distribution of the property of the bankrupt: but where a charge exists the property to be distributed is diminished by the extent of the encumbrance. Sec. 125 does not deal with priorities among secured creditors. As to the last clause thereof, providing that no lien or charge shall

be prejudiced, it is sufficient to say that no lien or charge is created by said sec. 46 of the Workmen's Compensation Act. Even assuming there is a lien, the priority under sec 46 is given only with respect to charges on the property "used in, or in connection with or produced in or by the industry," and the fund in question herein is not such property but the proceeds of a policy of fire insurance on property of the bankrupt.

The appeal was therefore allowed.

*Dinning versus Workmen's Compensation Board* (British Columbia), 1932. *Western Weekly Reports*, vol. 1, page 136.

### Priority of Bond Mortgages under Mechanics' Lien Act

A judgment in respect to the order of precedence of trustees under bond mortgages and holders of mechanics liens, was rendered in the Court of Appeal at Toronto in December, 1931. The circumstances of the case were stated by Mr. Justice Orde to be as follows:—

"Briefly stated, the facts are that the defendant made two bond mortgages to raise money to construct a large building in Toronto. Subsequently the company commenced building, and after the building had proceeded to a considerable extent work was stopped, and the unpaid contractors registered liens against the lands. By agreement between the parties the relative precedence of the two bond mortgages was not in issue nor was the question in issue whether these mortgages have security upon the property for the full amount of the respective bond issues under them, or only for those parts which had been sold before the first lien arose. The lienholders agree that the amount for which the mortgages are to rank is the full amount of the bond issues thereunder. Some of the debentures or bonds issued under the mortgages were sold after the first lien arose. On these facts, the Assistant Master found that the bond mortgages ranked as security in priority to the liens, only upon the value of the lands and buildings at the time that the first lien arose. From this decision the trustees under the bond mortgages appeals."

The decision of the Court of Appeal is summarized in *The Ontario Weekly Notes* as follows:—

Mr. Justice Orde, after finding these facts, says that the question involved in the appeal is a very simple one. The appellants argued that the holders of debentures purchased subsequent to the time the first lien arose, and without notice, either actually or by registration of the liens, are entitled to have their

purchases treated as if they were monies subsequently advanced and secured upon a separate mortgage, so as to give them the rights of a mortgagee, making subsequent advances under s. 13 (1) of the Mechanics' Lien Act, Revised Statutes of Ontario, (1927), c. 173\*.

"This theory is contrary to the fundamental principle underlying the security given to debenture holders. All debenture holders rank *pari passu*, irrespective of the date of purchase of their security. The appellants relied upon *Warwick v. Sheppard* (1917); but this case is no longer applicable, as the Act has been since amended and the security of a prior mortgage is now limited under s. 7 (3) to the actual value of the land and premises at the time the first lien arose. The learned Justice of Appeal distinguishes *O'Brien v. McCoig* (1928), on the ground that that decision made it clear that subsequent advances by a mortgagee are in no way imperilled by the existence of a lien which has already arisen, but of which the mortgagee had no notice. But this right to priority in the amount secured by the mortgage in no way affects the proportionate part of the value of the land out of which the mortgagee may realize, which is expressly limited as against lienholders to the actual value of such land and premises at the time the first lien arose. In the opinion of the learned Justice of Appeal, s. 13 (1) does not give a subsequent advance any higher or better position than if it had been made when the mortgage was given. Priority of payments or advances made on a mortgage before written notice or registration of the lien is governed by s. 7 (3)† and the provisions of the Registry Act. The learned Justice of Appeal thinks that the learned Assistant Master was right and that the appeal should be dismissed."

\* (This section reads as follows):—

13. (1) The lien shall have priority over all judgments, executions, assignments, attachments, garnishments and receiving orders recovered, issued or made after such lien arises, and over all payments or advances made on account of any conveyance or mortgage after notice in writing of such lien to the person making such payments or after registration of a claim for such lien as herein after provided.

†Section 7 (3) reads as follows:—

(3) Where the land and premises upon or in respect of which any work or service is performed or materials are furnished to be used, is encumbered by a prior mortgage or other charge existing in fact before any lien arises such mortgage or other charge shall have priority over all liens under this Act to the extent of the actual value of such land and premises at the time the first lien arose, such value to be ascertained by the judge or officer having jurisdiction to try the action by proper evidence to be adduced before him.

Chief Justice Mulock, Mr. Justice Fisher and Mr. Justice Grant agreed with the foregoing. Mr. Justice Riddell read a separate judgment in which, after discussing the facts and the statutory provisions involved, he reached the same conclusion.

*Inglis versus Queen's Park Plaza Company* (Ontario) (1931), *Ontario Weekly Notes*, Vol. 40, page 563.

#### **Liability of Subcontractor for Injuries to Contractor's Employee**

A labourer employed by a firm of building contractors in Saskatchewan was assigned in the course of his employment to the work of helping to unload a truck belonging to, and operated by, a cartage company. While so engaged the labourer (the plaintiff in this case) sustained an injury, for which he brought an action for damages against the cartage company, but subsequently obtained an order adding the building contractors as defendants. The action was dismissed with costs as against the contractors' company, but judgment against the cartage company was given the plaintiff at the first trial and confirmed on appeal.

The Court of Appeal (Saskatchewan) stated that in determining the question whether the "servant" was, at the time of the act complained of, the servant of the cartage company or the servant of the building contractors (who employed the cartage company) the proper question to consider was: "who had the right at the moment to control the doing of the act complained of?" In the present case the "servant" was held to be the servant of the cartage company, and this company was therefore held to be liable for negligence which was found to have caused injuries to a labourer employed by the building contractors. *Muranyi versus Vallance Coal and Cartage Company*, and *Smith Bro-*

*thers and Wilson, Limited* (Saskatchewan), 1932, *Western Weekly Reports*, vol. 1, page 182.

#### **Wrongful Dismissal where Workman is Not a "Menial Servant"**

An action for wrongful dismissal was brought in a District Court in Saskatchewan, the plaintiff having entered into an agreement in writing with a farmer to operate and manage the latter's farm for one year, and having been dismissed before the termination of that period. The Court, in a decision which was later affirmed in the Saskatchewan Court of Appeal, held that the plaintiff was not a "menial servant" entitled only to one month's notice or one month's wages in lieu thereof, and that, the termination of the contract not having been justified, he was entitled to the amount due him for the unexpired portion of the term, less such amount as he had been able to earn during that period.

The agreement also provided that should it be terminated "for other reasons than misbehaviour or incompetency" on the part of the employee he should be paid on a certain monthly basis. The Court held that this provision did not limit the amount to which the plaintiff was entitled to that actually earned by him at the time of his dismissal calculated at said rate per month. The provision was held not to have reference to a wrongful termination of the contract but to its termination for such causes as the death of the master or servant or by mutual agreement.

The judgment noted that the employment of the plaintiff differed in its nature from that of the plaintiff in the case of *Peidle versus Bonas* (LABOUR GAZETTE, May, 1931, page 622), in which a farm servant on his dismissal was held to be a "menial servant" and awarded one month's wages. *Little versus Laing* (Saskatchewan), 1932, *Western Weekly Reports*, vol. 1, page 210.

## NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

### Monthly Summary

**A** DECREASE was noted in industrial employment in Canada at the beginning of February, according to returns received by the Dominion Bureau of Statistics from 7,766 firms, each with a minimum of fifteen employees. The staffs of these firms on February 1 aggregated 819,175 persons, as compared with 837,312 on January 1. This decline brought the index (average 1926=100) to 89.7 from 91.6 in the preceding month, while on February 1, 1931, 1930, 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, it was 100.7, 111.6, 110.5, 102.0, 96.6, 91.8, 87.1, 91.7, 90.6, 79.9 and 91.2, respectively. The returns are representative of employment in all industries except agriculture, fishing, hunting and highly specialized business.

At the beginning of February, 1932, the percentage of unemployment reported to the Department of Labour by local trade unions stood at 22.0 contrasted with percentages of 21.1 at the beginning of January, 1932, and 16.0 at the beginning of February, 1931. The February percentage was based on the reports received by the Department of Labour from 1,849 labour organizations with a total membership of 187,891 persons.

Reports received from the offices of the Employment Service of Canada indicated a decline in the volume of business transacted in January, when a comparison was made, both with the preceding month and also with January a year ago, these comparisons being reckoned from the average daily placements effected during the periods under review. Fewer placements in the highway division of construction and maintenance were mainly responsible for the decrease in each case. Vacancies in January, 1932, numbered 31,538, applications 57,755, and placements in regular and casual employment, 30,721.

The average cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in sixty-nine cities was again lower at \$7.34 for February, as compared with \$7.68 for January; \$9.44 for February, 1931; \$11.83 for February, 1930; \$11.15 for February, 1929; \$10.61

for February, 1922; \$16.92 for June, 1920 (the peak); \$15.77 for February, 1920; and \$7.75 for February, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics based upon prices in 1926 as 100 was also again lower at 69.2 for February, as compared with 69.4 for January; 76.0 for February, 1931; 93.9 for February, 1930 95.0 for February, 1929; 98.3 for February, 1922; 164.3 for May, 1920 (the peak); and 64.8 for February, 1914.

The loss in working time caused by industrial disputes in Canada showed large increases in February as compared with January, 1932, and February, 1931. Seventeen disputes were in progress at some time during the month, involving 3,611 workers and resulting in the loss of 14,679 working days. Corresponding figures for January, 1932, were: 11 disputes, 1,044 workers and 10,729 working days, and for February, 1931, 9 disputes, 2,066 workers and 10,431 working days.

### Industrial Disputes Investigation Act.

During February the Department of Labour received the report of the Board of Conciliation and Investigation appointed in connection with the dispute affecting the clerks, freight handlers and other employees of the Canadian Pacific Railway Company. A Board was established to deal with a dispute between the Hull Electric Company and its motormen, conductors and other employees. Full particulars of the proceedings during the month, with the text of the report referred to above, appear on page 260.

### Unemployment and Farm Relief Act, 1931.

On another page of this issue will be found the report of the Dominion Director of Unemployment Relief in respect of operations under the Unemployment and Farm Relief Act, 1931. The report was laid on the table of the House of Commons by the Minister of Labour on March 9, in the form of a blue book giving statistical and other details of the administration of the Act. The appendices, which contain

many further particulars, are omitted from this issue owing to lack of space.

#### **Department of Labour established in Nova Scotia.**

The legislature of Nova Scotia has adopted a Bill, introduced by the Premier, the Hon. G. S. Harrington, to provide for a Department of Labour for the Province, to be in charge of a Minister of Labour. The Act provided that the new department "shall take cognizance of all matters relating to labour, and shall administer such affairs, matters, Acts, and Regulations as the Governor-in-Council from time to time assigns to that Department, whether or not the same have been assigned or have belonged by or under any Act of the Legislature of Nova Scotia or otherwise to some other Department or to some member of the Executive Council."

#### **Features of American plan for unemployment insurance**

In a recent address on "Unemployment Insurance for the United States," Mr. Leo Wolman, head of the Research Department of the Amalgamated Clothing Workers of America, enumerated certain features which characterize the American type of insurance as distinct from the European. The "American type" is represented by the unemployment insurance plan of Mr. Wolman's union, which has been described in former issues of the *LABOUR GAZETTE* (June, 1930, page 677, etc.), and also by the Draft of an Act which was submitted in 1930 by the American Association for Labour Legislation as a basis for State legislation (*LABOUR GAZETTE*, February, 1931, page 120). The following principles are stated to characterize the type of insurance that would conform to American conditions: (1) the principle of limited liability; (2) the principle of the segregation of unemployment funds by industry; (3) the principle of administration by industry. These principles are held respectively to ensure elasticity in the management of the unemployment reserve funds, the free mobility of labour, and protection against excessive cost.

"Limited liability" definitely restricts the period for which unemployment benefits are paid to individuals, and the amount of such payments. "Segregation of funds" means that each industry would have its own fund from which benefits would be paid; "the device of a single fund for all insured industries," Mr. Wolman states, "once regarded as a simple and sound administrative expedient, has in England degenerated in practice to a system whereby the better organized and more stable industries

are taxed to subsidize the unemployment of the disorganized and unstable ones. It is the judgment of the most sympathetic students of the English plan that the pooling of the unemployment funds of all industry has acted to encourage shiftless methods of management and has removed all incentive toward the regularization of industry."

The principle of "Administration by Industry," which is considered to suit American conditions, is that a wide range of administrative procedure and discretion should be allowed. "Individual industries are encouraged to set up their own machinery of administration, including industrial employment offices, under the supervision and control of the public authorities. Wherever possible the attempt is made to stimulate a measure of self-government in the conduct of this plan of unemployment insurance so that it may preserve a fresh and experimental outlook and not fall a prey to bureaucratic methods and habits".

#### **Colonization work of Dominion Government**

In the course of a debate in the House of Commons on February 23, on the subject of unemployment, the Hon. W. A. Gordon, Minister of Labour, referred to the action of the government in restricting immigration to Canada (Order in Council P.C. 1957, dated August 14, 1930, *LABOUR GAZETTE*, October, 1930, page 1144), and to the new policy of colonization, which had resulted, since November, 1930, in the movement of 44,000 Canadians from the industrial centres and their establishment on the land. This work has been effected with the co-operation of the transportation companies: "This has not been accomplished," the Minister stated, "by a state-aided system of colonization, but by using the organizations of the two great railway systems and our own department. . . This is not a mean contribution to the situation which confronts us, and it has been made without expense to the country".

In reply to a question in the House on February 29, Mr. Gordon gave particulars of the colonization proceedings as follows:—"Under the 'Back-to-the-Land' movement 6,352 families (averaging 5 members to a family) have been settled by co-ordinated effort of the Department of Immigration and Colonization and the Canadian National and Canadian Pacific Railways, without financial assistance by the government of any other agency. Under the 'Back-to-the-Land' movement 13,199 single men have been placed as farm labourers by co-ordinated effort of the Department of Immigration and Colonization and the Canadian National and Canadian Pacific Railways, without financial assistance by the government or any other agency".

Distribution by provinces is as follows—

Province	Families settled	Single men placed
British Columbia.....	534	156
Alberta.....	2,193	3,520
Saskatchewan.....	1,455	1,929
Manitoba.....	661	2,002
Ontario.....	611	4,165
Quebec.....	761	747
New Brunswick.....	42	393
Nova Scotia.....	81	276
Prince Edward Island.....	14	11
Total Souls.....		44,959

### Immigration and the railway problem

Elsewhere in the same speech the Minister of Labour referred to the railway problem as being due in part to the sparse settlement of the undeveloped regions of Canada. "This country," he said, "has two great railroad systems, with three transcontinental lines, two of them conceived about 1908. To-day I think there is no thoughtful man who will not admit that we are over-railroaded. So let us bear this in mind, that by reason of our projection of railroads across this country, whether we like it or not, we must get over to the positive side of immigration, because we must have more people if we hope to pay off the debt with which ten million people are loaded at present by reason of the railroad problem on our hands. That may not be a pleasant thought to those of us who entertain a more modest and homely idea of our country, that is, that a nation is only a collection of happy, prosperous, Christian homes, and that its strength may be measured by the number of such homes within its boundaries. It is not a happy thought for those of us who entertain that conception of our country, but whether we like it or not, if we are going to pay off that huge debt, we must get over to the positive side of immigration as soon as we can. That opens up a serious problem as to where we are to get people who will be acceptable to this country and who will be easily assimilated into our national life."

Mr. Gordon concluded his speech with an appeal for general co-operation in a concerted effort "to see, first, that the needy and the worthy are taken care of, and that there is no destitution in this land; and, secondly, that through a persistent effort we will bring this country back to normality faster than any other country in the world."

### Proposed settlement of displaced workers on the land

The Royal Commission on the Coal Mining Industry of Nova Scotia, whose report is printed on another page of this issue, suggest that an effort should be made to encourage miners without prospect of further employment to settle on the land. "We took advantage," they state, "of the fact that a land settlement committee was meeting in Halifax during our session here to discuss with them the prospect of farm settlement. We learned that on a survey recently made in Nova Scotia it was found that a not inconsiderable number of miners had practical experience of farming, and might be prepared to revert to the land, although in many instances they would need some financial assistance in taking up farm settlement."

### Parliament considers question of shorter working hours

The following proposed resolution moved by Mr. A. A. Heaps (North Winnipeg) was negatived by the House of Commons, after discussion, on February 15:—

"Whereas there are large and increasing numbers of our citizens at present unable to obtain employment and thereby the means of existence; and whereas during recent years production has increased enormously; and whereas real wages have not increased in proportion and thus consumption has not kept pace with production: Be it resolved; that, in the opinion of this house, in order to absorb the unemployed into industry, thus eliminating the enormous waste of enforced idleness, the hours of labour be materially reduced and the purchasing power of the masses increased, and further to this end, that the government be requested to submit the necessary measures to the house."

Mr. Heaps, speaking in support of the motion, pointed out that during the period from 1917 to 1929, industrial production in Canada increased over 70 per cent, while wages, as measured in terms of purchasing power, increased by only 16.4 per cent. These figures proved, he thought, that the problem of production had been solved, and the problem was therefore to secure a better distribution of the wealth produced. The only way to secure that end was "by reducing the hours of labour so that more people may be employed, and a matter of this kind can be dealt with only through the federal Parliament: it cannot be done by provincial legislation. That is why I am asking the federal government to take the initiative in legislation of that nature."

After a lengthy discussion the Hon. W. A. Gordon, Minister of Labour, pointed out that

"so far as the resolution is concerned, I am persuaded that this Parliament can do but little to carry into effect what it proposes. I am sure hon. members realize that if we attempted to carry out what is proposed we would be immediately confronted with protests on the part of the provinces that we were infringing their rights, because while we are a federal union we are not a legislative union, and the provinces jealously guard the rights that were conferred upon them at Confederation. . . . This House of Commons," Mr. Gordon continued, "has not the legislative power to bring in a measure that would carry into effect what is suggested in the resolution, and I seriously doubt if any committee of this house or any committee of economists could sit about a table and devise a scheme that would apply to all the different forms of industry and agriculture, giving effect to the idea contained in this resolution."

#### **Report of Commission on Workmen's Compensation in Ontario**

The report of Mr. Justice Middleton, who was appointed early last year as a Commissioner to inquire into the subject of Workmen's Compensation in Ontario (LABOUR GAZETTE, February, 1931, page 122), was presented to the Provincial Legislature on February 29. The recommendations made by the Commissioner will be given more fully in the next issue. Briefly, he proposes that the "waiting period" before compensation payments are made should be reduced from one week to three days; that the list of industrial diseases for which compensation is paid should be enlarged so as to include infected blisters, cancer occurring in connection with the manufacture of pitch and tar, dermatitis, and bursitis (Inflammation of the synovial lining of the joints); that dental treatment, where required as the result of an accident, should be given under the provisions for medical aid; that the system of "merit rating," whereby employers with a favourable accident record receive a reduction of assessments, be extended; and that severe penalties be exacted in connection with accidents to minors illegally employed.

On the other hand Mr. Justice Middleton is unable to approve the suggestions of labour organizations for an extension in the maximum wage on which compensation is calculated from \$2,000 to \$2,500, and for increase in the amount of compensation payable to widows and in respect to permanent and partial disability cases. He also rejects as impracticable the proposal that all employees without exception should be brought under the Act; he suggests, however, that the Board itself

should work out some plan that would provide for the inclusion of engineers in heating plants; employees in lumbering, hotels and public buildings; chefs, cooks and waiters in the catering industry; and employees in cheese factories, dairies and garages.

#### **Canadian Medical Association and health insurance**

The National Joint Study Committee of the Canadian Nurses' Association and the Canadian Medical Association, recently made public its report on a survey of nursing education in Canada, recommending, among other things, that training schools for nurses should no longer be left to individual hospitals, but should be subsidized, controlled and supervised by the State in the same way as normal schools. The report gives considerable space to the question of socialized nursing, which it linked closely with the problem of unemployment among registered nurses, 40 per cent of whom it found without work almost continuously. Socialization of nursing services, it is stated, would bridge the gap between the needy patient, unable to pay for the services of a graduate nurse, and the unemployed graduate, unable to market her services in 60 per cent of cases of illness. The survey found that about 50 per cent of all families in Canada are unable to secure adequate medical, dental and nursing attention because of insufficient means.

The suggestion that compulsory health insurance be instituted is contained in the report, to be applied under definite income limits for three classes of persons—wage earners, salaried people and others not included by the first two classes, such as small merchants and farmers. The report suggests the creation, by the Dominion Parliament, of a Federal Council of Nurses which might exercise the functions of an advisory, directive, educational, research and integrating nature.

#### **Health insurance proposals in British Columbia**

The Royal Commission on State Health Insurance and Maternity Benefits, which was appointed by the government of British Columbia in 1929 (LABOUR GAZETTE, June, 1929, page 609), presented their final report to the provincial Legislature early in February. In a progress report, presented in 1930 (LABOUR GAZETTE, April, 1930, page 400) the Commission stated their general conclusion that "there is justification and a general demand for the introduction in British Columbia of an economically sound and equitable public-health insurance plan, in the interests of the majority of Provincial workers,

of Provincial industries, and of the State—in the more effectual safeguarding and preservation of communal health, the more rational distribution of sickness costs, and the scientific reduction of such charges to the Government, to employers, and to individual citizens.”

The final report, according to statements in the press, recommends the adoption of compulsory state health insurance for all employed persons in the province with net incomes up to \$2,400, with optional insurance for the remainder of the population. The insurance would provide for free medical services, including drugs and appliances. The insured would be given free choice of doctors, within reasonable latitude. The financial structure of the proposed system would be based on either an “employee-pay-all” plan, or a division of total costs into ninths, two-ninths each to be paid by state and by employers and five-ninths by the insured.

Several alternative schemes are discussed by the Commission. An outline of the report will be given in a future issue.

#### **Parliament favours acceptance of 8-hour Day Convention**

The House of Commons, on February 17, agreed to the following motion, proposed by the Hon. Peter Heenan, former Minister of Labour:—  
“Whereas the Dominion of Canada is a signatory to the articles of peace of the treaties of Versailles, thereby subscribing to the principle of a maximum working day of eight hours; Therefore be it resolved that this House is of opinion that the Government of Canada should take appropriate steps to ensure, throughout Canada, the fulfilment of our treaty obligations and conventions arising out of the Peace treaty, relating to hours of work.”

The Hon. Hugh Guthrie, Minister of Justice, in accepting the motion on behalf of the Government, pointed out that the powers of legislation in regard to the determination of the hours of labour were, by the British North America Act, reserved to the Provinces, and that “the most this government can do in regard to the general subject is to bring that question directly to the attention of the various provincial governments and request them to co-operate.” The Minister further expressed the opinion that a conference between the Dominion and the provinces should be called as soon as conditions warrant such a conference being satisfactorily held. “It is not only in regard to this question of the hours of labour that we desire to consult the provinces; there are many questions which more or less involve a dispute as to jurisdiction. These questions are not in a satisfactory condition now, and much good might be

accomplished if a conference were held; and I trust that in the not-distant future a more satisfactory basis may be arrived at.”

#### **Wage Board appointed by Calgary Trades and Labour Council**

Following a suggestion contained in a resolution that had been adopted at a mass meeting of building trade mechanics in the city, the Calgary Trades and Labour Council, at a meeting held on February 12, appointed a wage board for the purpose of giving assistance to any trade union that may experience difficulties in negotiating new wage agreements. The members of the board are Messrs. J. E. Worsley, president of the Council and Fred J. White (secretary), with Messrs. Illingsworth and Riley (delegates). The membership was made small so that the Board could be quickly assembled when its services are needed. Any union requiring assistance is expected to appoint an additional member, so that all information pertaining to the negotiations may be immediately available for the use of the Board.

In the discussion on the formation of the Board, as reported in the *Alberta Labour News*, February 20, it was pointed out that many unions had working agreements expiring in the near future and that difficulties, due to the present economic conditions, might be experienced in signing up new contracts that would be satisfactory to the unions. The services of the board will be available to any union affiliated with the Trades Council.

#### **Safety of waterfront workers at Vancouver**

The Vancouver National Labour Council recently appealed to the Canadian government to ratify the Draft Convention adopted at the twelfth session of the International Labour Conference concerning the protection against accidents of workers employed in loading or unloading ships (the text of this Convention was given in the *LABOUR GAZETTE*, July, 1929, page 767). In connection with this request of the Labour Council it should be noted that the Governing Body of the International Labour Organization decided at its 56th session last January to place upon the agenda of the coming conference at Geneva the question of the partial revision of this Draft Convention (*LABOUR GAZETTE*, February, 1932, page 190). This decision was made chiefly in deference to the wishes of the British and German governments, which had pointed out certain difficulties in the interpretation of the Convention.

The Vancouver Council asked further that legislation be enacted under the Canada Shipping Act to provide adequate supervision in regard to the working conditions of longshoremen. "For some years past," they stated, "this Council has been endeavouring to secure the institution of some form of safety regulations enforceable by an independent and fully authorized person or department. In this we have, so far, been unsuccessful owing to the following reasons: the city or municipality in which such longshore work is being done has no power to enforce safety regulations in this industry; the Workmen's Compensation Board of British Columbia has no authority either to make or to enforce regulations regarding the safety in this industry; the government of the province of British Columbia assures us that it is similarly situated; and now finally the Minister of Justice of the Dominion of Canada has ruled that the Vancouver Harbour Board has no authority to enforce regulations or supervision of working conditions."

#### **Decline of Employment on Railways in Canada.**

In a summary of the statistics of the principal railways for 1931, prepared by the Dominion Bureau of Statistics, it is stated that Canadian railways have not earned such small revenues since the war as they did in 1931. Gross revenues amounted to only \$357,674,324 as against \$449,645,239 in 1930 and \$555,637,590 in 1928 (the peak year). Freight revenues were \$60,-857,836, or 19.1 per cent, less for 1930 and passenger revenues decreased by \$19,676,031, or 29.5 per cent. Passenger traffic was very light for both 1930 and 1931, but especially for 1931 when new low records were made for each month.

The total payroll amounted to \$218,270,288, or a decrease of \$38,330,995, or 14.9 per cent, the reduction in the average (monthly) number of employees being 19,024, or 11.6 per cent. The highest monthly number of employees was 153,299 for June, as against 175,419 for July, 1930, and 201,056 for June, 1929, the last being the greatest number of railway employees recorded during the past ten years. The 1931 peak was also the lowest of any year during the past decade. The low point was reached in December when only 130,802 persons were employed, which was a decrease of 70,258 employees from the peak in 1929.

Over 90 per cent of the work was full-time work and over 98 per cent was for nine months, although only 85 per cent of the employees worked full time. These computations do not make any allowance for a change in the personnel of the staff during the year.

#### **Ottawa Public Services Contribute to Unemployment Funds.**

On the initiative of the Civil Service Association of Ottawa, the public service organizations having members in the Capital, early last December undertook a campaign to solicit funds from Government employees and members of His Majesty's Forces located at headquarters in order to assist national and local funds used for the purpose of relieving distress due to unemployment. In addition to the Civil Service Association of Ottawa, the Civil Service Federation of Canada, the Professional Institute of the Civil Service, the Dominion Public Works Association, the Printing Bureau Employees' Association, the Federated Association of Letter Carriers and the members of His Majesty's Forces were all represented on a joint committee which planned and carried out the campaign. The collection was independent of all other appeals for funds from charitable institutions which were raised from amongst all citizens of Ottawa during the present winter. The amount pledged by the public service in this special collection was approximately \$24,500 and to date the sum of \$22,000 has been distributed to charitable organizations as follows: the Prime Minister's National Emergency Fund, under the direction of the National Red Cross, \$7,700; Ottawa Branch, Red Cross Society, \$4,400; Ottawa Welfare Bureau, \$2,200; Union Mission for Men, Ottawa, \$2,200; Canadian Legion Shelter, Ottawa, \$2,200; Ottawa Children's Aid Society, \$600; Salvation Army, \$600; Victorian Order of Nurses, \$600; Ottawa Day Nursery, \$400.

Mr. V. C. Phelan, of the Department of Labour, President of the Civil Service Federation of Canada, acted as chairman of the special subscription committee, while Mr. T. B. G. Rankin, of the Department of Agriculture, Treasurer of the Civil Service Association of Ottawa, was the Committee Treasurer.

#### **National Industrial Council for South African Printing Industry**

The constitution of a National Industrial Council of the Printing and Newspaper Industry of South Africa was adopted at a meeting of the parties concerned held at the close of 1931, and was registered under the Industrial Conciliation Act, 1924 (LABOUR GAZETTE, June, 1924, page 495). A similar council for the building industry was established in 1925 (LABOUR GAZETTE, July, 1925, page 648).

The parties to the Council are the registered employers' organizations and the registered trade unions whose members are engaged in

the industry. The objects of the Council include the following:—to secure the complete organization of employers and employees in the industry, and to promote good relationship between the two parties; to establish and regulate uniform working hours and conditions of employment; to secure to employees the greatest possible security of earnings and employment, and to minimize unemployment and casual labour; to establish and maintain a joint unemployment fund, and extended unemployment fund, and other measures of a similar nature, to promote the use of a joint label upon matter printed in establishments that are represented on the Council; to give employees responsibility in regard to conditions of health and comfort in their work; to consider and make recommendations on any proposed legislation affecting the industry, and to take measures to secure the payment of fair wages by public bodies; and finally to promote the establishment of Joint Boards, consisting of an equal number of each party in every town or group of small towns. Such joint boards will consider matters referred to them, and use their efforts to prevent or settle industrial disputes. The constitution lays down the procedure to be followed in the settlement of disputes, provision being made for disputes to be carried from a joint board to the standing committee, and thence to the executive committee for reference to a joint board or to an arbitrator, the arbitrator's decision to be binding. No strike or lock-out may take place within the membership of the Council during the term of any agreement.

#### CORRECTION

On page 162 of the last issue, in Table I, entitled "Financial Summary of Old Age Pensions in Canada as at December 31, 1931," the total number of pensioners in the Province of Ontario was erroneously given as 1,228, instead of 41,228. The correct figure was given in Table II, on page 163.

Under the provisions of a bill now before Parliament the period of the operation of the Unemployment and Farm Relief Act, 1931, is to be extended from March 1 (the date of expiration fixed by Section 8 of the Act) to May 1, 1932. The text of the Act was given in the LABOUR GAZETTE, August, 1931, page 901.

Representatives of forty-eight municipalities in Ontario, at a meeting held at Hamilton on February 23, adopted a resolution in favour of contributory unemployment insurance, and asking the Dominion Government to frame a scheme, which would assure a fair standard of living.

The Chief of Police at Vancouver recently prohibited the picketing of a theatre on the ground that under a city by-law a licence must be obtained from the police department before advertising can be displayed in the street.

During the month of February a total of 3,224 accidents were reported to the Workmen's Compensation Board of Ontario in the industries in Schedule 1 of the Act, 16 of which were fatal cases; in Schedule 2 industries 240 were reported, including 5 fatal cases; and 559 Crown, 6 of which were fatal, were reported during the month making in all 4,023, of which 27 were fatal.

The substitution of the dial telephone system for the manual system decreases employment opportunities for operators by about two-thirds, according to a study made by the United States Bureau of Labour Statistics. By the end of 1930, about one-third of the telephones in the United States were of the dial type. If the output of calls per operator had remained the same in 1930 as in 1921, the number of operators necessary for handling the calls in 1930 for the Bell Operating Companies alone would have been 69,421 more than the number actually in service.

An article appearing in the *Monthly Labour Review* (Washington) states that technological changes in the motor-vehicle industry in the United States have caused important changes in the relative importance of various occupations. The adoption of new processes has introduced new occupations and has also resulted in some of the older occupations becoming almost unnecessary. The outstanding occupational changes appear in connection with machining operations, bench work, painting, and machine-tool maintenance.

At a meeting of the Essex-Kent Division of the Industrial Accident Prevention Associations of Ontario on March 1, safety banners were presented to the workers in the sixteen firms. The plants receiving the awards were: Walker Fell Overall, and Weaver Canadian of Chatham (third consecutive year); Wallaceburg Lumber Company, Watson Taylor Co., Ridgetown; Wilson Broon Co., Ridgetown; Hadleys Chatham Ltd.; Planet Printing Company and Shepherd Printing Company (second consecutive year); Dresden Lumber Co.; Chatham Malleable and Steel Mfg.; Hayes Wheel and Forging Limited; International Harvester Company; Imperial Oil Company; Witchell Sheill Shoe Co.; Chatham Daily News; and Naylor-Osborne Co. Ltd., of Wheatley (first year).

## GENERAL REVIEW OF THE INDUSTRIAL SITUATION

### Employment

THE employment situation at the end of February was reported by Superintendents of the Employment Service of Canada to be as follows:

Farmers in the Province of Nova Scotia continued to draw their year's supply of wood and due to favourable weather, farm produce in fair quantities was available at the city markets, but prices were low. At Halifax, stormy weather was responsible for smaller catches of fish but at New Glasgow, plentiful supplies of fresh cod, halibut and haddock were on hand. Lobster fishermen were busy preparing for the lobster season. Little activity, other than hauling of pulpwood, was reported in the logging industry. Coal mines in the New Glasgow zone, operated from three to six days per week, while those in Cape Breton area, worked one and two days. Manufacturers of foodstuffs and confectionery reported business as fair, and woodworking factories were busy preparing material for spring. Iron and steel industries were not so busy, and at Trenton several plants were idle. Building construction was quiet, as all the large contracts had been completed and only minor jobs and small dwellings were under way. Street and sewer work continued as a relief measure. Transportation, both freight and passenger, was fair, except at Halifax, where extra trains were required for passenger arrivals for the week-end. Trade, wholesale and retail, was slow. A slight improvement was noted in the demand for charworkers, housekeepers and domestics.

As in Nova Scotia, farmers in the Province of New Brunswick were busy cutting firewood, but very little farm produce was delivered to the markets and buying was slow. There was a fairly plentiful supply of fresh gaspereau, halibut and haddock and a small amount of cod, but the majority of fishermen were busily engaged in hauling ice for the fishing trade. No call existed for woodsmen and logging operations on long timber were about finished for the season. Spool rod sawing and pulp manufacturing was brisk in Northern New Brunswick, but all sash and door factories on the Miramichi river were closed, owing to the severe weather. Manufacturers of confectionery and foodstuffs reported business as fair, but foundries and machine shops and the Saint John Drydock and Shipbuilding Company were quiet; other plants were operating on part time. Prospects for renewed activity in building construction appeared brighter, with several large buildings progressing rapidly and other plans for the erection of additional

structures under way. Relief work was still provided, however, by the Public Works Department at Saint John. Roads being good, local transportation was active; bus lines also were busy. Twelve steamers were in dock at Saint John over the last week-end of the month and waterfront workers were fairly busy during that period. Steam railways reported an improvement in freight loading, but passenger traffic was somewhat quiet. Trade was fairly good, collections were slow. There was little change in the Women's Domestic section, a fair number of placements being made.

With the exception of Montreal, there was practically no demand for farm help in the Province of Quebec. Quietness prevailed in the logging industry. Renewed activity in mining was shown in the zone covered by the Amos office, but elsewhere conditions were poor. Manufactures throughout the province were quiet, although Montreal reported a slight improvement in the boot and shoe trades, clothing and metallurgy. The rubber industry in that city showed a marked change, due to the fact that one of the largest establishments had moved part of its plant elsewhere, this resulting in the discharge of several hundred employees. At Quebec and Sherbrooke, factories were running on reduced time and at Three Rivers a general slackening was shown in all lines. Building construction also was quiet, a large number of workers finding employment on relief schemes provided in the various centres. Transportation showed no improvement. Except at Sherbrooke, commercial conditions were unfavourable. Vacancies for domestics were scarce in Montreal, while the number of applicants increased. In the City of Quebec, the demand for household help was active but in other districts little change was shown.

There was little improvement noted in the requests for farm help in the Province of Ontario. A few enquiries were made regarding men for spring work, but in most instances wages offered were small. The demand for pulp and cordwood cutters and tie makers was good at Fort Frances, though few placements were made, many experienced bushmen refusing the work offered. Port Arthur reported a slight decrease in orders and the same difficulty in getting men to accept the opportunities at hand. Very few men were taken on at the mines, but many sought work in this group. Manufacturing, throughout the province, showed little change, although it was reported from some centres, that former employees were being reabsorbed in industry.

## MONTHLY STATISTICS REFLECTING INDUSTRIAL CONDITIONS IN CANADA

(Official Statistics except where noted)

	1932		1931	1931		1930

(1) Calculated from yields of Ontario bonds.

(9) Excluding lines east of Quebec.

(2) For group figures, see articles elsewhere in this issue.

(10) Including lines east of Quebec.

(3) Bradstreet

(11) MacLean's Building Review.

(4) Figures for end of previous months.

(5) Figures for four weeks ending February 27, 1932, and corresponding previous periods

(6) Sugar production given in periods of four weeks ending December 31, February 28 and January 31, 1931, also December 31, 1930.

(7) The index of the physical volume of business includes forestry, mining, construction, manufacturing, trade, imports, exports, car loadings, shares traded and bank debits. Industrial commodity production includes forestry, mining, manufacturing and construction. Manufacturing includes production of flour, sugar, newsprint, pig iron, steel and automobiles; imports of cotton, rubber, wool and petroleum; slaughtering of cattle, sheep and hogs; storage holdings of butter and cheese

Production, in many instances, is controlled by orders received, as very little finished stock is being carried on hand. There was little activity registered in building construction: such as was reported was largely that provided by private citizens on interior decorations and casual work. A few large contracts had been let but no labour had yet been hired. Highway construction, as a relief measure, still continued in many municipalities. Trade was slightly better. The demand for women domestics increased but good vacancies, especially at Toronto, were still at a premium. Cooks general were scarce; many women, however, were available for all casual positions offered.

Placements in farming in the Province of Manitoba continued to increase, somewhat, due to the Provincial Government relief plan. There was no demand for loggers or miners. Manufacturing showed no improvement. A paper plant had discharged approximately one-half its staff, preparatory to closing down entirely within a few weeks' time. The re-opening of the Canadian Pacific Railway shops at Weston was anticipated for fifteen days in March and in April and about 2,000 men will be affected. Several large building contracts were under way in the City of Winnipeg and plans for the erection of other buildings were under consideration. Relief work still provided employment in other localities. Retail trade was better, but wholesale was slow. Char workers in the women's section were in demand, but the call for domestics declined sharply.

There was little call for farm help in the Province of Saskatchewan. Men were unwilling to work for board and wages offered in the majority of cases were \$5 per month, with an exceptional vacancy at \$10. A few men were sent out to lumber camps from Yorkton and Prince Albert. Mining was quiet, also building construction. Relief camps provided work for some men, while others found employment on casual jobs both in the city and rural districts, but these were insufficient for all applicants available. Trade was dull. There was a slight increase in the orders received for domestics and housekeepers, all orders for day and hotel work were easily filled.

There was an increased demand for farm help in the Province of Alberta, with prospects for spring work fairly good, but wages were likely to be low. Conditions were fair in the logging industry, though there were few calls for men. Mining was quiet. Little activity was registered in building construction and relief work on various projects continued to be about the only kind of employment available. There was no railway construction.

Trade was very slack. Some orders were placed for women domestic workers, but applicants were still much in excess of vacancies.

Few requests for farm help were listed at the Employment Offices in British Columbia. Winter logging was practically finished, though mills at New Westminster were fairly busy, but required no additional workers. Mining, both metal and coal, showed no improvement, one mine alone, at Kimberley, operating on a six-day week. Manufacturing was confined mostly to saw mill operations, where light orders, only were reported, with bids under current prices. Slightly better conditions prevailed in the building trades, especially at Penticton and Nanaimo, where a considerable number of tradesmen were employed. Road camps continued in operation in some districts, while at others, relief work had been shut down, thus throwing a number of men out of work. Some few railway gangs had been sent out for snow shovelling, due to snow slides which had considerably delayed railway service. Drydocks and shipyards were quiet. There was also little work for longshoremen. Trade was extremely dull, with collections poor. All orders received in the women's domestic section were easily filled, with fewer applicants reported as registering at Vancouver.

#### EMPLOYERS' REPORTS.

Employment showed a falling-off at the beginning of February; the Dominion Bureau of Statistics tabulated returns from 7,766 firms, whose staffs aggregated 819,175 persons, as compared with 837,312 on January 1. Reflecting this decline, the index (average 1926=100) stood at 89.7 at the beginning of February, while in the preceding month it was 91.6, and on February 1, 1931, 1930, 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, it was 100.7, 111.6, 110.5, 102.0, 96.6, 91.8, 87.1, 91.7, 90.6, 79.9 and 91.2, respectively.

Reductions were recorded in all provinces, those in the Maritime Provinces being most pronounced. In the Maritime Provinces, construction reported especially heavy losses, but decreases were also indicated in logging, mining, communications and trade, while manufacturing was brisker. In Quebec, increases in manufacturing (notably of iron and steel, rubber, textile, leather and pulp and paper products), and in logging were offset by declines in mining, transportation, trade and construction. In Ontario, considerable gains were made in manufacturing, notably in the iron and steel, textile, leather and lumber divisions; communications and logging also reported heightened activity, while there were large seasonal reductions in trade, transporta-

tion and construction, and mining also released employees. In the Prairie Provinces, logging and railway construction were more active; manufacturing reported little general change, while seasonal shrinkage was recorded in trade and transportation. In British Columbia, there were large losses in construction, and manufacturing, logging, mining, communications, services and retail trade also showed a falling-off.

The trend of employment was downward in Montreal, Toronto, Ottawa, Hamilton, Windsor and the adjacent Border Cities, Winnipeg and Vancouver, while in Quebec City a slightly favourable tendency was in evidence. In Montreal, manufactures registered considerable recovery, especially in the footwear, iron and steel and textile groups, but large seasonal losses occurred in trade and building construction. In Quebec, manufactures reported improvement, while trade was seasonably dull. In Toronto, heavy seasonal decreases took place in trade, and transportation was also slacker, but there were important gains in manufacturing, notably in textiles and iron and steel factories. In Ottawa, manufacturing, transportation, construction and trade reported moderate declines. In Hamilton, employment showed a decrease, mainly of a seasonal character in construction and trade, while manufacturing reported no general change. In Windsor and the adjacent Border Cities, considerable recovery was indicated, chiefly in automobile plants, but the completion of certain unemployment relief works caused the release of a large number of workers, so that, on the whole, there was a reduction in employment in the Border Cities. In Winnipeg, the number employed showed a contraction, mainly in construction and transportation. In Vancouver, the manufacturing, construction and trade industries reported reduced activity, but transportation was brisker.

An analysis of the returns by industries shows improvement in manufacturing, notably in the iron and steel, textile, leather, lumber and rubber industries. On the other hand, there were losses in food, pulp and paper, electric current and some other plants. Logging showed practically no change, while mining, communications, transportation, construction and maintenance, services and trade reported curtailment, that in construction and trade being most pronounced.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of February, 1932.

# TRADE UNION REPORTS.

The situation among local trade union members continued depressed during January with a slight change from December, attaining a new high unemployment level for our records, namely 22.0 per cent. This percentage was based on the returns tabulated from an aggregate of 1,849 labour organizations, including 187,891 persons. In December 21.1 per cent of the members reported were without work, this being the previous peak of unemployment since the establishment of our reports. Extensive losses in employment from December were reported by New Brunswick unions, quietness in the building and construction trades being largely responsible for the change. Decreases of lesser degree were registered by Manitoba and Alberta unions, and in Nova Scotia, Ontario and British Columbia minor contractions of activity were noted. Saskatchewan unions reported a slightly upward level of employment from December, and in Quebec conditions were but nominally improved, the garment trades in the latter province showing a considerably better situation which was in large measure offset by slackness in building and construction. Compared with the returns for January, 1931, when the unemployment percentage for Canada as a whole stood at 16.0, Saskatchewan unions alone reported a better employment tendency during the month reviewed, though the change was nominal, while in the remaining provinces noteworthy curtailment of operations was indicated, the losses in Quebec being particularly severe and attributable chiefly to dullness in the manufacturing industries, especially the garment trades and in building and construction.

Elsewhere in this issue will be found a more detailed article on unemployment among local trade unions at the close of January, 1932.

Reports of the Employment Service of Canada for the month of January, 1932, showed 32,206 references of persons to positions, and a total of 30,721 placements. Of these, the placements in regular employment were 12,072, of which 9,124 were of men and 2,948 of women, while placements in casual work were 18,649. Vacancies offered by employers to the Service numbered 31,538, and of these 25,654 were for men and 5,884 for women, while applications for employment were registered from 46,420 men and 11,335 women, a total of 57,755. Fewer vacancies and placements were shown when the above figures were compared with those for the preceding month, but applications showed a gain. Marked declines, how-

ever, were recorded in all transactions when a comparison was made with January last year, the reports for December, 1931, showing 36,867 vacancies offered, 53,885 applications made, and 35,747 placements effected, while in January, 1931, there were recorded 55,185 vacancies, 86,044 applications for work, and 53,972 placements in regular and casual employment. A report in detail of the work of the offices for the month of January, 1932, will be found elsewhere in this issue.

According to a report prepared by the Dominion Bureau of Statistics, the value of permits issued in 61 cities in Canada during January, 1932, was \$2,761,929 as compared with \$7,895,106 in the preceding month and with \$8,401,456 in January, 1931.

The *MacLean Building Review* states that awards in the engineering group were mostly responsible for the increase in the value of February contracts over those of January. The February total was \$14,802,600. This total shows that 47.8 per cent was awarded in the Province of Quebec and valued at \$7,079,500. Ontario had \$3,955,900 or 26.7 per cent. The Maritime Provinces shared to the extent of 20.4 per cent, the value being \$3,023,300; while British Columbia had \$500,600, or 3.4 per cent, and the Prairie Provinces 1.7 per cent, or \$243,300.

The Engineering group took care of 56.3 per cent of the February total, the value being \$8,337,500. Business buildings accounted for 26.8 per cent, or \$3,963,700. Residential had \$1,975,900, or 13.4 per cent, and Industrial 3.5 per cent, valued at \$525,500.

### Production and Trade

Figures showing the volume of production in certain industries during recent months and also in the corresponding months last year are shown in the table on page 255.

The *Monthly Review of Business Statistics* states that business operations in Canada did not show important change in January from the low level of the preceding month. The index of the physical volume of business was 113.8 compared with 111.2 in December, while the index of manufacturing production showed a slight recession from the level of the last month of the year. The production of newsprint and steel showed moderate gains, while the imports of crude petroleum were considerably greater than in December after adjustment for seasonal tendencies. The index

of mining production showed only slight decline, shipments of silver and nickel showing gains after seasonal adjustment. The sales of livestock on the stockyards were considerably accelerated in January and inspected slaughtering showed a marked increase. The decline in the index of employment was from 91.6 on January 1 to 89.7 on February 1, whereas the normal change during the month is an increase of one point.

**Coal.**—Coal production in Canada during January totalled 1,152,531 tons, a falling-off of 24.9 per cent from the average for the month during the past five years of 1,535,137 tons. The January output was made up of 678,022 tons of bituminous coal, 424,840 tons of lignite coal and 49,669 tons of sub-bituminous coal. Alberta was the leading producing province with a production of 503,159 tons, Nova Scotia followed with 365,052 tons. British Columbia mines produced 155,021 tons; Saskatchewan mines, 109,307 tons; and New Brunswick mines, 19,992 tons.

Imports of coal into Canada declined 43.6 per cent in January to 629,633 tons as compared with the 1927-1931 average for the month of 1,116,363 tons. Anthracite importations amounted to 157,998 tons and included 142,095 tons from the United States and 15,903 tons from Great Britain. Bituminous imports consisted of 471,155 tons from the United States, a decrease of 13.7 per cent from the January, 1931, total of 546,263 tons. There was the usual small importation of United States lignite coal into British Columbia.

Exports of Canadian coal declined 66.7 per cent to 34,017 tons as compared with the January 1927-1931 average of 102,094 tons. The United States, Newfoundland, Australia, Japan, Irish Free State, and Belgium were the principal purchasers of Canadian coal in January.

Coal made available for consumption in January totalled 1,748,147 tons or 31.4 per cent below the five-year average for the month of 2,549,406 tons. The current month's supply was drawn from the following sources: United States mines, 613,730 tons; Canadian mines, 1,118,514 tons; and Great Britain mines, 15,903 tons.

A summary of Canadian trade in January, 1932, prepared by the Department of National Revenue, shows that the merchandise entering Canada for consumption amounted to \$34,114,507 as compared with \$40,289,795 in the preceding month and with \$50,368,318 in January, 1931. The chief imports in January, 1932, were: Non-metallic minerals and products, \$6,656,252; Fibres, textiles and textile products, \$6,284,551; Iron and its products, \$5,085,447.

BUILDING  
PERMITS  
AND CON-  
TRACTS  
AWARDED.

INDUSTRIAL  
PRODUCTION.

EXTERNAL  
TRADE.

The merchandise exported from Canada during January, 1932, amounted to \$38,366,699, as compared with \$53,255,476 in the preceding month and with \$44,682,883 in January, 1931. The chief exports in January, 1932 were: Wood, wood products and paper, \$12,940,917; Agricultural and vegetable products, mainly foods, \$9,073,257; Animals and animal products, \$5,721,613.

### Strikes and Lockouts

The time loss due to industrial disputes in February, 1932, showed a substantial increase over the previous month, a large increase appearing also in the number of workers involved. The increase was due largely to the occurrence during the month of several strikes of coal miners in western Canada, each of which involved from two hundred to three hundred workers, and to a strike of women's clothing factory workers in Montreal, P.Q., which, while of only two day's duration, involved 1,500 workers. In comparison with the figures for February, 1931, almost twice as many strikes and lockouts were recorded. The number of workers involved and the time loss incurred showed a less substantial increase, however, as for several days during February last year some 1,700 women's clothing factory workers were on strike in Toronto, Ont. There were in existence during the month seventeen disputes, involving 3,611 workers, and resulting in a time loss of 14,679 working days, as compared with eleven disputes, involving 1,044 workers, and resulting in a time loss of 10,729 working days in January. In February, 1931, there were on record nine disputes, involving 2,066 workers, and resulting in a time loss of 10,431 working days. At the end of the month there were on record seven disputes involving approximately 850 workers. These figures do not include those strikes and lockouts in which employment conditions were no longer affected but which had not been formally called off by the union.

### Prices

The average cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in sixty-nine cities was again lower at \$7.34 for February, as compared with \$7.68 for January; \$9.44 for February, 1931; \$11.83 for February, 1930; \$11.15 for February, 1929; \$10.61 for February, 1922; \$16.92 for June, 1920 (the peak); \$15.77 for February, 1920; and \$7.75 for February, 1914. The decline was due mainly to a substantial seasonal fall in

the price of eggs, though the prices of pork, bacon, lard, milk, butter, cheese, beans and prunes were also lower. Including the cost of fuel and rent with that of foods the total budget averaged \$17.25 at the beginning of February as compared with \$17.59 for January; \$19.78 for February, 1931; \$22.12 for February, 1930; \$21.41 for February, 1929; \$21.07 for February, 1922; \$26.92 for July, 1920 (the peak); \$24.71 for February, 1920; and \$14.54 for February, 1914. Fuel and rent were practically unchanged.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics based upon prices in 1926 as 100 continued to decline, being 69.2 for February as compared with 69.4 in January; 76.0 for February, 1931; 93.9 for February, 1930; 95.0 for February, 1929; 98.3 for February, 1922; 164.3 for May, 1920 (the peak); and 64.8 for February, 1914. In the classification according to chief component materials six of the eight main groups were lower, one was higher and one was unchanged. The groups which declined were: the Animals and their Products group, because of lower quotations for steers, hogs, hides, fresh meats, milk and butter, which more than offset advances in the prices of calves, lambs, fresh eggs and smoked ham; the Fibres, Textiles and Textile Products group, mainly because of lower prices for raw silk; the Iron and its Products group, due to declines in the prices of steel tank plates and automobile body plates; the Non-Ferrous Metals and their Products group, due mainly to reductions in the prices of lead, silver, tin, zinc and copper; the Non-Metallic Minerals and their Products group, because of lower prices for coal oil and sulphur; and the Chemicals and Allied Products group, because of lower quotations for sodium bichromate and certain other chemicals. The Vegetables and Vegetable Products group was slightly higher, increased prices for barley, flax, rye, wheat and flour more than offsetting lower prices for bran, shorts, raw rubber, gluten meal and potatoes. The Wood, Wood Products and Paper group was unchanged.

Approximately 624,000 workers, constituting about 40 per cent of Chicago's working population, were unemployed on October 15, 1931, the Illinois Department of Labour estimates in its Labour Bulletin of November, 1931. The estimate is based on the United States Census of Unemployment in that city for January, 1931, and on the monthly volume of employment index for the manufacturing industries of Chicago.

## RECENT PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

**D**URING the month of February the Department received the report of a Board of Conciliation and Investigation established under the provisions of the Industrial Disputes Investigation Act to inquire into a dispute affecting the Canadian Pacific Railway and certain of its employees being clerks, freight handlers and station employees and various subsidiary groups.

Reference was made in the February issue of the LABOUR GAZETTE, page 123, to the receipt of an application for the establishment of a Board of Conciliation and Investigation to deal with a dispute between the Hull Electric Company and certain of its employees, being motormen, conductors, track-

men, etc., members of Division No. 591, Amalgamated Association of Street and Electric Railway Employees of America. The dispute arose in connection with a 10 per cent reduction in wages proposed by the company, and directly affected 82 employees. On February 18th a Board was established and was constituted as follows: His Honour Judge J. H. Scott, of Perth, Ontario, third member and chairman, appointed by the Minister in the absence of a joint recommendation from the other Board members; Mr. H. P. Hill, K.C., Ottawa, Ontario, the company's nominee, and Mr. W. F. O'Connor, K.C., the employees' nominee.

### Report of Board in Dispute between Canadian Pacific Railway and Clerks, Freight Handlers and Station Employees

The Board of Conciliation and Investigation established on December 28th to deal with a dispute between the Canadian Pacific Railway and certain of its employees being clerks, freight handlers and station employees and various subsidiary groups presented its report to the Minister of Labour during February. The dispute arose in connection with a proposed 10 per cent wage reduction, directly affecting 5,000 employees. The personnel of the Board was as follows: The Honourable Mr. Justice R. A. E. Greenshields, of Montreal, P. Q., chairman, appointed by the Minister in the absence of a joint recommendation from the other members of the Board, Mr. Errol M. McDougall, K.C., and Professor J. T. Culliton, both of Montreal, P. Q., nominees of the company and employees respectively. The report of the Board was unanimous and was accompanied by an agreement signed by the parties concerned, the texts of which are given below.

#### Report of Board

February 19, 1932.

*In the matter of the Industrial Disputes Investigation Act and of a dispute between the Canadian Pacific Railway Company on the one hand (Employer) and certain of its employees on the other hand, being: Clerks, Freight Handlers and Station Employees and (subsidiary groups) Freight Handlers, West Saint John; Sub-Foremen and Freight Checkers, West Saint John; Gang Foremen, Checkers, Coopers, Sealers and Porters, Montreal Wharf; Shop Clerks, Angus; Stores Department Employees; Purser and Freight Clerks, B.C. Lake and*

*River Steamers; Freight Shed and Baggage Room Staffs, Victoria, B.C., Coast Steamship Service; Freight Shed and Baggage Room Staffs, E. & N. Ry.; Water-front Freight Handlers, Vancouver (Employees).*

To the Honourable the Minister of Labour,  
Ottawa, Ont.

SIR,—The Board of Conciliation and Investigation established in the above matter and composed of the Honourable Mr. Justice R. A. E. Greenshields, Acting Chief Justice of the Superior Court, District of Montreal; Errol M. McDougall, K.C., of Montreal, nominated by the Railway Company, and Professor J. T. Culliton, of Montreal, nominated by the Employees, was convened and held formal sessions at the Court House in the City of Montreal, on the 28th day of January, the 3rd day of February, the 12th day of February, the 15th day of February, the 18th day of February and the 19th day of February, 1932.

The Railway Company was represented by:  
Mr. Grant Hall, Vice-President,  
Mr. George Hodge, Manager of the Department of Personnel,  
Mr. W. S. Hall, Superintendent; Brandon.

The employees were represented by:  
Mr. F. H. Hall, Vice-President Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees.  
Mr. E. L. Oliver.

The dispute in this case is well defined and arose out of the request made to the men to

accept a reduction of 10 per cent in their compensation. The application for the constitution of the Board states the matter in issue and the preliminary negotiations between the parties to reach a settlement of the dispute, as follows:—

"On October 2, the Employers served notices upon the Employees to the effect that from October 16, and until December 31, 1932, they should accept a reduction of ten per cent in their compensation on each payroll, the existing basic rates of pay to be maintained and the matter to receive further consideration at the expiration of the period mentioned unless, in the meantime, arrangement should mutually be made otherwise. In the event that the proposal was not accepted, the communications stated that they should be accepted as the required thirty days' notice for the revision of agreements between the employers and employees for a ten per cent reduction in the rates of pay specified therein.

"Following informal discussions on September 28, 1931, and October 2, 1931, held in Montreal between representatives of the railways and the employees represented by Mr. W. A. Rowe, General Chairman, Eastern Lines, and Mr. J. L. Pateman, General Chairman, Western Lines, and the Employees' General Committee, at which existing conditions and the railway's proposal were fully discussed, an adjournment was requested by the employees until approximately October 22, in order to consider and put before their membership the railway's proposal, which was fully outlined in the letter of October 2 above mentioned.

"Further conferences were held in Montreal on October 30, November 2, and November 5, with a view to arriving at a settlement of the question. At the latter conference it was stated on behalf of the employees that they were not prepared to accept the proposal of the railway."

It is thus evident that the proposal of the company was definitely declined by the employees and the aid of a Board of Conciliation, under the Statute referred to, was sought and obtained, to deal with the dispute. The parties came before the Board, where every opportunity was afforded them to state fully their respective cases both orally and in writing.

The Board views with great satisfaction the thorough and painstaking care with which both parties presented their submissions and desires to express its commendation of the friendly and frank manner in which both the company and the employees approached and discussed a subject which might well have engendered feelings of bitterness and suspicion. We are

glad to testify that no such sentiments were manifest, nor do we believe that they were present.

In harmony with the Statute under which the Board was constituted, efforts were made to bring about a settlement between the parties, and, finally, at the session of the Board on February 15, after the company's representatives had submitted their written reply to the employees' statement, upon the suggestion of the Chairman of the Board, the parties were again invited to meet with a view to composing their differences and reaching a mutually satisfactory adjustment of the dispute. The session was adjourned till the 18th upon the understanding that some such effort would be made.

The Board is extremely gratified to learn that its efforts to conciliate the parties have been successful and that they have reached and concluded an agreement satisfactory to the Board and which is duly approved and ratified in so far as may be necessary.

The Board, therefore, has pleasure in reporting that the matters in dispute between the parties have been amicably adjusted in accordance with the terms of the said agreement, an original whereof is appended hereto.

All of which is respectfully submitted.

(Sgd.) R. A. E. GREENSHIELDS,  
*Chairman.*

(Sgd.) ERROL M. McDUGALL,  
*Member of Board.*

(Sgd.) JOHN CULLITON,  
*Member of Board.*

#### AGREEMENT—EASTERN LINES AND WESTERN LINES

Agreement between the Canadian Pacific Railway Company and its Clerks, Freight Handlers and Station Employees, including so-called subsidiary groups as follows:—

- Freight Handlers, West Saint John, N.B.
- Sub-Foremen and Freight Checkers, West Saint John, N.B.
- Gang Foremen, Checkers, Coopers, Sealers and Porters, Montreal Wharf.
- Shop Clerks, Angus Shops.
- Stores Department Employees.
- Pursers and Freight Clerks, British Columbia Lake and River Steamers.
- Freight Shed and Baggage Room Staffs, British Columbia Coast Steamship Service, Victoria, B.C.
- Freight Shed and Baggage Room Staffs, Esquimalt and Nanaimo Ry., Victoria.
- Waterfront Freight Handlers, Vancouver.
- Stores Employees, British Columbia Coast Steamship Service, Victoria.

The parties hereto agree that:

(a) Ten per cent shall be deducted from each employee's pay cheques;

(b) Basic rates of pay as specified in the various schedules shall remain in effect.

(c) This agreement shall be effective from March 1, 1932, to February 28, 1933, but if, on or after January 15, 1933, business conditions have not so improved as to enable the Railways to terminate the agreement at February 28, 1933, notice to that effect will be given to the representatives of the Employees upon which the parties to this agreement will confer further and agree to make every reasonable effort

to bring the matter to a conclusion before February 28, 1933.

For the Company:

(Sgd.) GRANT HALL,  
*Vice-President.*

For the Employees:

(Sgd.) W. A. ROWE.  
(Sgd.) J. L. PATEMAN,  
*General Chairman.*

Approved:

(Sgd.) F. H. HALL,  
*Vice-President.*

Montreal, February 18, 1932.

## REPORT OF ROYAL COMMISSION ON THE INDUSTRIAL DISPUTE IN THE COAL MINES IN THE ESTEVAN DISTRICT, SASK.

A DISPUTE between the coal miners, members of the Mine Workers' Union of Canada, and certain mine operators in the Bienfait-Estevan coal field in Saskatchewan, resulting in a strike from September 7, 1931, to October 7, 1931, was referred to a Royal Commission under Section 65 of the Industrial Disputes Investigation Act, Judge Edmund R. Wylie, District Court Judge of the Judicial District of Estevan, being appointed by an Order in Council on September 18 as Commissioner. The causes of the dispute included complaints as to the observance of the mining laws of the province. The provincial government also issued a commission to Judge Wylie with provision for the appointment of counsel and other assistance. The Commissioner secured the assistance of counsel, mining engineers, accountants, inspectors of weights and measures, and sanitary inspectors, and secured reports from these on the finances of the various mining companies, the conditions of the mines and their methods of operation, wage scales, condition of houses for miners, rentals, and the operations of company stores.

The report deals in detail with each feature of the dispute in each mine, and outlines the events leading up to the strike and the proceedings which led up to its termination. The report also deals with an agreement which was reached during the commission's inquiry, providing for improvements in working conditions and for a partial restoration of wage rates. A riot on September 29, in which three strikers were killed, several strikers and other persons were injured, and much property in the town of Estevan was damaged, is not dealt with in the report, as the matter was before the courts, a number of persons having been committed for trial in March, 1932.

### EXTRACTS FROM REPORT

The following extracts from the report summarize the results of the inquiry, with recommendations.

#### Organization in the Field

Prior to the year 1931 there had been no labour organization in this field, or in the individual mines. For several months before the strike there had been a feeling of unrest growing out of the reduction in wages and the working conditions complained of. An organization in each mine, with a Committee authorized to represent the men in any difference or complaint arising out of wages or weights or working conditions, would have removed much of the dissatisfaction.

There was a feeling fairly general among the men in the mines that an individual miner making personal complaints to the management, was in danger of dismissal. The operators state that no miner was ever dismissed by reason of the fact that he had made a complaint to the manager. There is no doubt, however, that when a miner, who had voiced a complaint of this kind to the management, was afterwards laid off through lack of work or dismissed for any other cause, there was a tendency to attribute his dismissal entirely to the fact that he had been regarded as an agitator by the management.

As a result of a number of meetings in August, 1931, Joseph Forkin, an organizer, was brought into the field and advised the men to join a union. On August 23 S. Scarlet addressed a meeting at Taylorton, and on August 25 James Sloan, President of the Mine Workers' Union of Canada, arrived from Calgary, and on or about this time a local branch of the Mine Workers' Union of Canada was organized. Prior to the arrival of James Sloan and the formation of the Union, John Loughran and Bernet Wynn had been acting president and vice-president of the local organi-

zation. On his arrival, however, from Calgary, James Sloan assumed control.

The events, during this period, leading up to the strike are set out in the evidence of Loughran, Wynn, William Wallace Lynd, Dan Moar and Thomas M. Malloy, Deputy Minister of Railways, Labour and Industries in the Provincial Government. Mr. Malloy's oral evidence is supplemented by a written statement filed on the inquiry and verified by him. It is quite clear from the evidence of Loughran and Wynn that the Honourable John A. Merkley and the Honourable James F. Bryant, and Thomas M. Malloy, all acting in behalf of the Provincial Government, showed a deep interest in this mining dispute and were making every effort to bring about a conciliation between the operators and the men. The Provincial Government had already offered a Board of Inquiry under the Public Inquiries Act of Saskatchewan, and had endeavoured to arrange a Board of Conciliation, which the operators agreed to accept, but which James Sloan had refused in an interview with Loughran and Wynn.

The operators had refused to recognize the Mine Workers' Union of Canada, on the ground that it was affiliated through the Red International of Labour Unions with the Communist International of Russia. James Sloan, in his interview with Malloy and others during this period, denied that there was any affiliation with Russian Communism and maintained that the local branch of the Union was not a "Red" organization and insisted that before any negotiations took place leading to a settlement of the dispute, there must be recognition of the Mine Workers' Union of Canada by the operators. On September 7 a meeting of the Executive Committee of the Local Union was held at which Sloan presided, and as a result of this meeting, the local Union ordered a strike of all miners in the Saskatchewan Lignite field to become effective on the morning of September 8. On September 7 Mr. Malloy sent the following telegram to James Sloan:

"Am informed operators refused to meet your Union tonight and strike to take place tomorrow Stop Would strongly urge you advise men to observe the law in such matter and that you apply immediately for board under Industrial Disputes Act, for thorough investigation working conditions and that men remain at work pending investigation."

During this meeting James Sloan placed before the Executive Committee various methods of procedure referring to the Board of Conciliation, Arbitration and a Royal Commission, and it is quite clear from the evidence that the miners preferred a Royal Commission, but the contents of the telegram were not made

known to the members at the meeting and the miners were not made aware that in refusing the Board of Conciliation offered, and in ordering a strike, which became effective on the morning of September 8, they were acting illegally and in contravention of Section 57 of the Industrial Disputes Investigation Act.

All its efforts to prevent this strike having failed, the Provincial Government immediately communicated with the Department of Labour at Ottawa and the Dominion Government sent Chief Conciliation Officer M. Campbell to Estevan. These negotiations are fully set out in the evidence of Dan Moar on the statement filed by him and in the statement of Mr. Campbell also submitted to the Commission.

It is quite clear from this evidence that the miners refused at this time to return temporarily to work until certain concessions, which the operators refused, were granted.

There has, apparently, been some misunderstanding between the Miners' Executive and Mr. Campbell as to the opening of the inquiry by the Royal Commission before the men returned to work. The instructions from the Dominion Government to the Commission are, however, perfectly clear and, as already pointed out, were not made conditional on the men returning to work.

A number of persons who have been charged with taking part in the parade and the riot which followed, have been committed for trial by jury at the next regular sittings of the Court of King's Bench at Estevan in March, next, when all the facts and circumstances connected with this parade and the responsibility therefor will, no doubt, be brought out in the evidence. It was not, therefore, considered necessary or advisable for the purpose of this Commission to go into this phase of the matter at this time.

The great obstacle in the way of a meeting of the operators and the men, prior to the strike, was the demand of the union officials that the operators should recognize the Mine Workers' Union of Canada and the refusal of the operators to comply with this demand.

The Mine Workers' Union of Canada was organized as an ordinary labour union, which in the year 1931 became affiliated with the Workers' Unity League of Canada. The purpose of this league, as appears from the evidence, is set out in the draft constitution of this organization as follows:

"To organize the Canadian Workers into a powerful revolutionary Industrial Union, created on the axis of the widest rank and file control. To fight for the defence and improvement of the conditions of the working class, mobilizing and organizing the Canadian workers for the final overthrow of capitalism, and

for the establishment of a Revolutionary Workers' Government. . . . The Workers' Unity League of Canada is the Canadian Section of the Red International of Labour Unions, pledged to a program and policy of Revolutionary struggle for the complete overthrow of capitalism and its institutions of exploitation and the setting up of the state power of the Workers and poor farmers through a Workers' and Farmers' Government."

One must come to the conclusion that the Mine Workers' Union of Canada, through its affiliation with the Workers' Unity League, has ceased to become a labour union in the ordinary sense, but has been converted into a revolutionary industrial union, pledged to a program and policy of revolutionary struggle for the complete overthrow of capitalism and for the establishment of a revolutionary workers' government.

Apart altogether from the question as to whether or not the purpose sought to be achieved is to be brought about by peaceful means, or by means of force and violence, I cannot see how men who are in charge of these mines entrusted with the management of an industry in which a large amount of capital is invested, can be reasonably expected to recognize, on behalf of the companies they represent, an organization with such an avowed economic purpose. It further seems to me that the attitude of this union, as expressed through its officials in the events leading up to the strike, was more consistent with the avowed policy of the Workers' Unity League than with securing a satisfactory solution of the difficulty in the best interests of the miners.

The printing and distribution of the open letter, purporting to be signed by the Saskatchewan-Manitoba District Council of the Workers' Unity League, through the mining area during the negotiations on October 18 and 19, urging the men who were illegally on strike at that time, to remain on strike, irrespective of any arrangements made with the local committees, is also in accordance with the avowed purpose of this League. There is no proof, however, that the Workers' Unity League was responsible for this letter, but it is only fair to say that the members of the local executive of the Miners' Union have denied any responsibility for it, and that the letter itself was repudiated at a meeting of the miners held at this time.

### Summary

The causes underlying the industrial unrest in this field, and the circumstances which led to the cessation of work, as disclosed in the oral and documentary evidence submitted, may be summarized as follows:

(1) The seasonal and fluctuating nature of the industry, reducing the average earnings and

making it difficult for the miners to obtain employment during certain months of the year.

(2) Financial conditions arising out of the rapid reduction in realization on coal, due to competition following the advent of the mechanized stripping plant in the field.

(3) Reductions in wage schedules during the latter part of 1930 and during 1931, and the fear, based on statements of the operators during the summer of 1931, that further reductions would be made when the fall season opened.

(4) Certain unsatisfactory working conditions in the mines to which special reference has been made.

(5) Certain unsatisfactory living conditions in the mining camps, already referred to.

(6) The lack of any recognized procedure in any of the mines for dealing with complaints or disputes between the operator and the worker, due to a lack of organization in the mine, and the absence of any representative committee with authority to speak for the men.

(7) The demand of the union officials that the operators recognize the Mine Workers' Union as a condition precedent to any negotiations for settlement, and the refusal of the operators to recognize the union or negotiate with it in its official capacity.

(8) The antagonistic attitude of the President of the Mine Workers' Union toward a Board of Conciliation, which the operators had agreed to accept.

## REMEDIES

### 1. A Thorough Inspection and a More Detailed Inspector's Report

Most of the mines in this field have developed from rather primitive conditions.

The method of inspection has not kept pace with the development of the larger mines. I think this is clear from the evidence of several witnesses, as well as the engineers who inspected the mines for the Commission, and the evidence of the inspector himself, Mr. Samuel Lee, who appeared before the Commission and produced a large number of inspectors' reports. The present inspector has done some useful work, particularly among the smaller mines and has made some valuable suggestions in his evidence. I do not understand, however, how a thorough system of inspection could have failed to detect and report certain unsatisfactory conditions, existing for some time back in a number of these mines, many of which have been remedied since attention was called to them during the inquiry.

The inspector points out that the report form prepared for his use is too general and

makes little or no provision for a detailed statement on any point. The form appears to have been ample for any report produced on the Inquiry, but from the evidence I can understand the force of this objection. For example, the space of one line, allotted in the form for a report on ventilation, which the inspector invariably reports as being "Good," seems to me inadequate in view of the evidence.

It seems to me that under "Ventilation," this form should require a specific statement as to the quantity of air entering the mine and at the working faces; the number of animals as well as men in the mine; provision for cross-cuts; for keeping the air free from contamination; conditions of doors and brattices; difficulties if any in removing powder smoke and black-damp when present; obstructions to the air current; the location of the fan and the number of hours it is kept in operation, as well as any other matters affecting ventilation, coming under the notice of the inspector, or required by the Mines Act and regulations. All provisions in the Mines Act and regulations should be treated much in the same way in the report, so that any contravention of the Act will be noted.

Evidence was submitted as to the method of inspection in other lignite coal areas where the inspector was required to give a specific answer to a large number of questions dealing with conditions in the mine. A more detailed report of this kind would, in my opinion, insure a more thorough inspection and a copy of such report posted at the entrance to the mine would further protect the health and safety of the miners by tending to keep the mine up to the proper standard at all times. It would also furnish reliable data for amendments to the Act and regulations, so that these could be kept well up to mining development in the field. This question of inspection is also discussed by Mr. Cox in his report at page 15.

## 2. Improvement in Living Conditions

The conditions under which a miner lives in these camps depend largely on himself, but there are certain matters such as the sanitary condition of the camp, the general condition and state of repair of the house in which he lives and the facilities for washing, and changing when he leaves the mine, all of which have a very important influence on his mental outlook and his attitude towards his work.

As already pointed out, wash-houses are in use at two of the mines and there is a good supply of drinking water at all the mines but one, where some delay has occurred in making provision for this, for reasons already explained.

The attitude of all the operators toward these improvements in living conditions was entirely sympathetic as will be seen from the evidence, and the memoranda of negotiations in connection with the various mines on file. The only objection raised was the financial condition of the mines, and this must be recognized, but having considered all this, it seems to me that it will be an economic advantage to the operators in the end, and bring about a better mental attitude if some provision is made from monies usually reserved in the financial statements for depreciation and depletion, or if provision is made in some other way, for the necessary repairs to buildings rented to the miners, and for necessary improvements in the camp, and these improvements should be made within a reasonable time.

## 3. Hours and Methods of Payment

There has been considerable evidence submitted as to the number of hours a miner should work and the question as to whether or not he should be paid monthly or every two weeks.

As to the hours, the evidence would support an eight-hour day with provision for extending the time, by special agreement when necessary, in order to enable the mine to take advantage of increased orders in the busy season, or rush orders at other times. During the negotiations on October 18 and 19, the parties agreed to an eight-hour day from face to face for the miners, and a nine-hour day for the day-men, with some provision for extra time to meet emergencies.

During the Inquiry, the miners expressed themselves as being strongly in favour of a pay day every two weeks, as they claimed that this would enable them to buy for cash and to take advantage of bargains in necessities, and give them much better value for their money, and also to a large extent, enable them to keep out of debt. The operators contend that it will be inconvenient for them, as the coal is sold on a thirty-day basis, and will also increase the expense of book-keeping.

I have come to the conclusion that, subject to the right of the parties to make a special agreement, in order to get the best results from labour in these mines for the mutual benefit of the operators and the men, the working hours and method of payment in these mines should be brought into conformity with the method employed in the coal mining areas in other Canadian fields, as soon as the adjustments can be made.

## 4. Subsidies

The question of subvention has already been dealt with. A number of remedies suggested to the Commission, such as subsidies and a

tax on machinery, on the ground that it displaces labour, are not properly within the scope of this Commission, and would require a much more exhaustive inquiry along different lines to justify the expression of any opinion thereon. It will be sufficient to refer to the evidence, setting out the different points of view, in connection with these suggestions.

### 5. Amalgamation

Another solution of the economic problem facing these mines was referred to by Mr. Morfit, general manager of the Western Dominion Collieries, Limited, and a similar plan has been recommended by Mr. Cox in his report at page 15.

Mr. Morfit refers to a consolidation, or amalgamation, of the larger producing mines, which might be worked out for the purpose of reducing the cost of production, and to permit the instalment of the most efficient equipment.

It would seem as if, unless there is a rapid increase in output, economic conditions will sooner or later force such action on the operators, and from the expert opinions expressed on the Inquiry the result would be beneficial.

### 6. Increase in Markets

The most practical, permanent solution of the problem facing this industry at the present time, is to be found in the possibility of a greatly increased market for Saskatchewan lignite coal, resulting in a larger output in all the mines. Many of the operators refer to this potential market as the hopeful sign of the Industry, and the steps now being taken to educate the public as to the true value of this coal and the proper method of burning the same, are already bringing some satisfactory results to the industry. A great deal of valuable oral and documentary evidence, dealing with this phase of the inquiry, was placed before the Commission by the operators and their Consulting Engineer, R. L. Sutherland, and by the Deputy Minister of Labour in the Provincial Government, Mr. Thomas M. Malloy.

For the purpose of this report, a very brief summary of the evidence, on which certain conclusions as to the prospects of the mining industry in this field, more particularly that carried on by the underground mines, are based, will be sufficient.

(a) *Market Territory:* The Saskatchewan lignite field has a favourable location in the southeastern portion of the province with good railway connections and a closer natural market territory in Saskatchewan and Manitoba than any other competing coal.

From data furnished on the inquiry, including statistics and maps, which appear to me to be reliable, Saskatchewan lignite coal has a natural advantage based on the heat value of the coal in approximately 80 per cent of the area of Saskatchewan and Manitoba. The present lignite mining industry of Saskatchewan, however, now supplies only about 6.3 per cent of the total requirements of the two provinces, and about 15 per cent of the requirements of the Province of Saskatchewan. It is not to be expected that lignite can displace all other fuels in this area, but it is pointed out that to supply even the very modest objective of one-quarter of the present demand in that area, would require an increase in production to 1,880,000 tons per year, giving employment to not less than 1,500 people.

In a survey made by the provincial government in February, 1930, it is estimated that on the basis of the price of coal at that time, and after making a comparison of heat values and railway mileages, Saskatchewan lignite from this field should command an annual market in the territory referred to, to the extent of about 3,000,000 tons. Since that time the decrease in price has been due to a large extent to competition within the field.

(b) *The effect of Increased Production on costs of operation and wages:* From evidence submitted, the Saskatchewan lignite field, as a whole, is not producing coal in proportion to the capital invested. The output for Saskatchewan should be 960,000 tons per annum to place it on the same basis as Alberta with reference to capital investment, whereas the output for 1929 was 580,189 tons and for 1930, 579,424 tons.

In Mr. Sutherland's treatise on the conditions of the coal mining industry in Saskatchewan, dated November 3, 1931, a copy of which was filed during the inquiry, in Table 10, the effect of increased production from 580,189 tons to 960,000 tons on the basis of 1929 conditions, is shown in a striking manner. In this table it is demonstrated that this increase in output would reduce the cost of operation, overhead, etc., from 39.4 per cent to 23.9 per cent, and would increase the wage scale by 28 per cent without affecting in any way the percentage of earnings on capital.

The average number of days worked during the year, namely: 225 in 1929, or the average number of men employed, namely: 561 for the same year, would be increased accordingly.

At present there are no dividends on capital in this field, and these have not been taken into consideration in ascertaining the costs

of operation in the mines affected by this dispute during the past year, or in making an estimate for the future. It also appears from the evidence that in all these mines, as is no doubt the case in other industries, a certain minimum output is necessary to produce coal at prevailing market prices, without loss, but once this point in production is reached the output in these mines can be doubled, owing to their present capacity, and increased wages and profits secured with very little increase in overhead or fixed costs. Such a result can not, of course, be obtained in a year and, as already pointed out, some arrangement for stabilization in prices at something approaching the actual value of the coal is necessary to meet the immediate situation.

The evidence submitted, however, establishes the fact that loss in realization can be recovered, and ground gained, by capturing even a portion of the natural market referred to.

(c) *Market development in North Dakota:* To further demonstrate the possibility of a greatly increased market for this field, the development of the coal industry in the State of North Dakota was referred to. This State contains a large lignite coal area bordering on the Saskatchewan field. This coal, which is very similar to the Saskatchewan coal, has a B.T.U. value of around 7,000 to 7,100 as compared with the Saskatchewan field which averages 7,200. In the State of North Dakota, with a population of 685,000 people, the production of lignite coal in 1921 was 895,715 tons, which in 1930 had increased to 1,849,144 tons, while the production in Saskatchewan for 1930, with a population of 867,000 people, was 578,189 tons. Seventy-five per cent of the coal burned in the State of North Dakota is lignite coal mined in the State. Only 15 per cent of the coal burned in the province of Saskatchewan consists of lignite produced in the province. In explanation of this remarkable increase in the North Dakota market, it was stated that about 15 years ago a concerted effort was made to popularize lignite coal, and that during the following years, the people of North Dakota had been educated in the best methods of burning this coal and in the use of proper burning equipment.

The mining equipment of the Saskatchewan field is well up to the standard of the North Dakota mines, but the evidence submitted will establish the fact that the province of Saskatchewan is about 15 years behind the state of North Dakota in market development. From the point of view, therefore, of an available market, the future of the lignite

coal industry in this province is very promising. The result, however, will depend largely, as it did in the state of North Dakota, with the operators themselves. The work being done through their consulting engineer, who specializes in combustion, in the way of education and practical demonstration, and the active interest being taken by the Government of Saskatchewan in the development of this market, would indicate that the operators and the province of Saskatchewan are alive to the situation.

(d) *Government Analysis of the Coal in Various Mines:* Considerable evidence was given to the effect that the Saskatchewan Government should establish the calorific value of the coal from the various mines in B.T.U. per pound by analysis. The operators of the underground mines referred to all strongly favoured this procedure. It was also advocated by R. J. Lee, mining engineer, and Mr. Cox in his report makes the following statement at page 16:—

"A competent federal or provincial authority should carry out accurate sampling from each mine in the field, such samples to be at least three in number from each mine, and to cover only those portions of the seam which are being extracted. A set of samples of the commercial productions should also be obtained. Such samples should be analyzed by identical methods by the federal or provincial laboratory, and the results published."

There was a certain amount of opposition to this procedure on the ground that the quality of coal varies in different sections of the mine, and that accurate results cannot be obtained. It was also contended that in the case of industrial coal, the tests are made at the proper place, namely, at the plant where the coal is being consumed.

Mr. Lee states in his evidence that there is no difficulty in obtaining accurate samples from all mines by certain approved methods in use in the province of Alberta and other places.

Different Government publications were submitted in which the heat units, ash content, moisture and other contents of the coal in particular mines were set out in detail. I am satisfied from the evidence that if this is not already done, the Saskatchewan Government should undertake to ascertain by analysis the heat units and other values of the coal in different areas of the Saskatchewan lignite field, and should also know by actual tests the value in heat units of all the larger producing mines.

Reliable data of this kind would greatly assist in marketing the coal from the field and would assist each mine in disposing of its coal according to its merits.

The preparation of domestic coal also plays a very important part in its market value, and the heat value of coal may also be improved by mechanical treatment. These are facts which should also be taken into consideration. In view of the rapidly increasing demand for the coal from this field, it might be advisable to introduce a legislation, providing that all coal shipped from Saskatchewan mines shall have a trade name, and that the mine from which it is shipped shall be designated.

### RECOMMENDATIONS

1. That the agreements arrived at between the men and the operators during the conference held on October 19 and 20 continue in force until September 1, 1932.

2. That during the summer of 1932 wage schedules for the following year, or such longer period as may be agreed on, be fixed at a conference between the operators and the men of the respective mines.

3. That in order to remove a cause of friction in the future as to dockage screenings, etc., the wage schedules of the miner be worked out so that in every mine where the change of system can be reasonably effected, the miner shall be paid on a mine-run basis.

4. That pending the revision of these schedules, normal conditions of timbering in the rooms continue to be included in the tonnage rate, but that any abnormal condition, requiring additional timbering in the rooms, be paid for at the present rate for timbering in entries, or at such other rate as may be agreed on.

5. That on the revision of wage schedules, provision be made for a different rate for the man not qualified under the Act to have charge of a working face, and the qualified man with whom he is working in the same room.

6. For the better enforcement of health regulations, that the Government consider the advisability of including all mining camps outside of an incorporated village in a separate unit or health district.

7. That provision be made in the Mines Act or Public Health Act, requiring the owner, manager or agent to keep all houses in mining camps, occupied by mine workers, in a reasonably good state of repair, and to provide the camp with a sufficient supply of good drinking water.

8. A more thorough inspection of the mines and a more detailed inspector's report, cover-

ing all working conditions in the mine and reporting on any contravention of the Act and regulations.

9. The strict enforcement of all provisions of the Mines Act and regulations.

10. An inspection of the tippie scales on or before the first day of September in each year by the Inspector of Weights and Measures.

11. That the check weighman, or representative committee from any mine may, at any time, apply to the Minister who shall be empowered to and may, if he thinks it necessary, direct an inspection either as to weight or as to the condition of the scales.

12. That the heat value in B.T.U. and other values of the coal mined in different districts of Saskatchewan, be ascertained and fixed by Government analysis.

13. That the heat value in B.T.U. and other values of the coal from all mines producing coal above a certain quantity for sale, be ascertained and fixed in the same way.

14. That the Government consider the advisability of introducing legislation, with a view to having the coal from all mines in the province, producing coal above a certain quantity, sold under a trade name, and the name of the mine and the area in which it is situated designated.

15. That the working arrangement between the operators and the men for the deduction of an agreed amount for medical services and sick fund, be continued, and that the amount be paid out by the operators as directed by the men, the details to be worked out and embodied in future legislation.

16. That the special rules referred to in section 39 of the Mines Act be formulated and adopted at a special conference between the manager and a representative committee of the men at each mine, and approved by the Minister as soon as possible.

16a. That in view of the evidence submitted, the existing subvention rate be reconsidered by the Canada Fuel Board.

17. That the Mines Act be amended so as to incorporate in due form the following provisions:—

(a) A provision making it clear that the Act is intended to apply to coal mining, and not to other forms of mining.

(b) That in addition to the certificates of manager and pit boss provided by the Act, there shall be a third-class certificate granted to any applicant qualified to act as manager of a mine where less than six persons are employed, and a miner's certificate granted to any applicant entitled to be in charge of a working face.

(c) That no person be allowed to operate a mine where less than six persons are employed,

without having first obtained the third-class certificate referred to, at least.

(d) That no miner be allowed to be in charge of a working face at any mine, unless he is the holder of a miner's certificate, and that no miner shall receive such certificate, unless he has been employed in some capacity underground in a mine for, at least, six months, and has satisfied the inspector by oral examination as to his ability as a miner.

(e) That an applicant for a third-class certificate must have qualifications, at least, equal to those of a qualified miner, and must satisfy the inspector by oral examination as to his ability to manage the class of mine to which his certificate applies.

(f) That any applicant for a third-class certificate, or any applicant for a miner's certificate, being dissatisfied with the decision of the inspector may appeal in writing to the Minister, who may appoint a special board for the purpose of granting such applicant an oral examination, or may otherwise decide the matter, and his decision shall be final.

(g) That on and after the 1st day of September, 1932, all wages earned by any person, or persons, employed in or about a mine, in which twenty or more persons are employed underground, shall be paid twice a month unless otherwise agreed.

(h) In a mine where wages depend on the amount of coal gotten out, all wages shall be paid according to the weight or admeasurement of all the coal gotten out by the miner, with a provision that an agreement may be made between the miner and the operator for deductions on account of slack or nut coal, or on account of impurities in the coal.

(h-a) That an adequate amount of ventilation shall mean not less than 200 cubic feet of pure air per minute, for each person and animal employed in the mine.

(i) That the mine fan be kept in operation for 24 hours a day, including Sundays, and that should it be stopped at any time during working hours, the miners be immediately withdrawn until the operation of the fan is resumed.

(j) That all air passages be kept reasonably clear of clay-falls or other impediments.

(k) That all doors in actual use in the mine be kept closed, and that all doors not in actual use be taken off the hinges, and that no doors be propped, or fastened back, or opened, except for the passing of persons, animals, cars or locomotives.

(l) That the owner, agent or manager in every mine shall post in some conspicuous place at the mine, a plan showing the ways of ingress or egress to and from the various

outlets, with the travelling roads leading thereto.

(m) That immediately after inspection, the inspector shall cause to be posted in some conspicuous place at, or near, the entrance to the mine, a copy, or duplicate, of his report.

(n) That properly constructed ambulances, or stretchers, with splints, bandages, and sufficient other medical supplies necessary for the purpose of rendering first aid, shall be kept at every mine ready for immediate use in case of accident.

(o) That at least one person in every mine shall hold a certificate showing that he has taken a course in First Aid and Ambulance work, fitting him to give first aid to persons injured in or about the mine.

(p) That where more than 20 persons are employed below ground, a wash-house approved by the Minister shall be provided containing hot and cold water, where such persons may conveniently wash themselves and dry and change their clothes.

(q) That the present agreement in the larger mines referred to as to hours, be continued until September 1, 1932, and that, thereafter, no miner shall be allowed to work below ground for more than 8 hours during any consecutive 24 hours, except in case of emergency, provided that the time may be extended by special agreement between the operators and the men when necessary, in order to enable the mine to fill increased orders in the busy season, or rush orders at other times.

(r) That man-holes be required in every haulage way, the same to be at least 3 feet in depth from the wall, 5 feet high, and 3 feet wide, and when old rooms or cross-cuts are used as man-holes, the same shall be properly marked in accordance with the Act and kept clear of refuse or other material.

(s) That no working place in a mine shall be driven more than 60 feet ahead of ventilation, without cross-cuts.

(t) That sub-section 3 of Regulation 5 of the Mines Act be revised so as to make it clear that in all mines where inflammable gas has not been found within the preceding 12 months, the pit-boss, or other competent person shall inspect the mine every day, immediately before work is commenced in any day.

(u) That a copy of the report of such inspector shall be signed as provided by the Act and also posted in a conspicuous place at, or near, the entrance of the mine.

(v) That section 37 of the Regulations be repealed and a new section substituted, providing that a sufficient supply of suitable timber shall be constantly kept in each working place, as near the working face as is practicable, and in no case shall it be further away than the

nearest cross-cut to the working face, or other convenient place in the vicinity thereof.

(w) That the miners in any mine may require the owner, manager or agent to deduct a certain pro-rata amount from their wages to pay the check weighman, but will pay the same to him in such amount and at such time as the men in each mine direct

(x) The recommendations in this report have been limited to complaints made during the Inquiry, and matters arising therefrom, but some further revision of the Act, in due course, would appear to be necessary in order to better regulate the industry in its present state of development.

In conclusion I wish to express my appreciation of the co-operation received from the operators and representatives of the miners throughout the Inquiry; of the consideration shown the Commission by the management and men while visiting the various mines; of the assistance rendered by counsel, officials, reporters and experts, and also by the Dominion and Provincial Governments in furnishing engineers and inspectors as requested.

All of which is respectfully submitted,

E. R. WYLIE,  
*Commissioner.*

## CONDITIONS IN THE COAL MINING INDUSTRY IN NOVA SCOTIA

### Report of the Royal Commission appointed by the Provincial Government

THE Royal Commission appointed by the Government of Nova Scotia to inquire into conditions in coal mining in the province presented their report in February. The circumstances leading to the appointment of the Commission were outlined in the last issue (page 161). The commissioners were as follows:—

Sir Andrew Rae Duncan (coal commissioner for the British Government in 1919-20), chairman.

Rev. Dr. H. P. MacPherson, president of St. Francis Xavier University of Antigonish, N.S.

Dr. J. W. MacMillan, chairman of the Ontario Minimum Wage Board.

The Commissioners were instructed to inquire into and report upon the following subjects:—

1. Income, rates of wages, hours and conditions of employment prevailing in the various classes or occupations of mine workers above and below ground; and whether and if so to what extent and by what means such income, wages, hours or conditions should be varied or revised, having regard to the best interests of the industry and those employed therein; any inequalities between the different classes of mine workers as regards wages, hours, and conditions of employment, and whether and if so to what extent any of such inequalities are unjustifiable or unfair and what remedy or remedies should be applied.

2. All factors directly or indirectly entering into the cost of production, transportation, distribution and marketing of coal and its by-products, and whether such costs have been or are excessive and if so to what extent and for what reason or reasons.

3. All such other conditions and matters whatsoever whether of the kind hereinbefore mentioned or not which directly or indirectly have affected or are relevant to the state or condition of the coal mining industry in the province, as may be deemed expedient by the Commissioners.

The present report is, in some respects, supplementary to the report of the Commission of 1925, which was printed as a supplement to the LABOUR GAZETTE, January, 1926.

### Referendum of Miners on March 14

Shortly after the receipt of the report of the Royal Commission, the Executive Board of District 26, United Mine Workers of America, sent out copies of the report to the officers and members of the local unions, together with a statement of the opinion of the Board concerning the recommendations therein. The Executive Board pointed out that the report must be considered from two angles: (1) The proposed re-allocation scheme which would result in the closing of Numbers 11, 24 and Acadia No. 3 collieries, involving the displacement of about 2,000 miners; and (2) the proposals and recommendations in regard to wages.

In regard to the first of these two conclusions the Executive Board unanimously decided that it was outside their jurisdiction even to consider such a change, and that responsibility in such matters rested with those charged with responsibility for the successful operation of coal mining in the Province, namely, the Provincial Government and the Provincial Department of Mines. The Board further urged upon the members the necessity of a concerted effort to have these proposals abandoned, and announced that a meeting with the Provincial Government had been arranged for the purpose of discussing a resolution that had been adopted at the last District convention, protesting against the closing of the collieries, and seeking legislation, if necessary, to provide that no colliery be closed until all the mineral is worked out. If the interview with the government should

prove unsuccessful, the Board recommended that the date of the next Annual Convention should be advanced so that the subject might be dealt with before May 1.

In regard to the Commission's recommendation of a reduction in wages the Executive Board stated, in part, as follows: "As an Executive Board we are loath to recommend this proposition for acceptance, but after full and careful consideration we recognize that it is our duty to accept responsibility in this matter; and although it is the unanimous opinion of our Board that the reduction of wages recommended by the Commission is not the solution for the ills of the coal industry of Nova Scotia, yet we realize that a suspension of operations at this time would bring about complete disaster to the industry and communities affected and work untold hardships on our members; and therefore, in view of those facts, the Board by unanimous vote has decided that the acceptance of recommendations of the Commission with respect to wages, which is ten per cent

of a reduction on datal rates, with a minimum of \$3.25 per day and twelve and a half per cent of a reduction on contract rates, is preferable to a strike in these abnormal times and we are, therefore, submitting this question of wages to a referendum vote. In making this recommendation we have in mind the closing of Dominion Number 6 colliery in 1925, when the men ceased work, and we believe if a cessation of work would take place at this time it would be a lever welcomed by the Corporation for the immediate closing of Dominion No. 11, 14, Florence and Acadia No. 3 collieries. Our recommendation, therefore, is that the recommendation of the Duncan Commission be accepted with reference to the terms of agreement and wage schedules for a period of ten and a half months, the agreement to be in effect from March 15, 1932, to January 31, 1933."

A referendum was taken by the miners on March 14, the proposed wage reductions being rejected by a majority of 1,203 in a vote of 10,241.

### TEXT OF REPORT

The text of the new report is as follows:—

His Honour Walter H. Covert, Lieutenant Governor of Nova Scotia:

SIR,—In compliance with the commission dated January 25, 1932, we have the honour to report. Our terms of reference cover, in general, subject matters which were examined by the Royal Commission in 1925. The membership of our commission, is with one exception, the same as then, and our financial and technical advisors are the same also. The new member of the commission has carefully perused the report of the 1925 commission, and we think it convenient, not only for ourselves but also for those immediately concerned with the problems we are investigating to regard our present report as, in some respects, supplementary to the previous report.

We have held sessions at Sydney, Montreal, Springhill, New Glasgow and Halifax,—in that order—hearing in all 85 witnesses.

As on the previous occasion, we have confined our investigations as far as operators are concerned to the Dominion Steel and Coal Corporation (wherever, therefore, the term "operators" is used in this report it refers to that corporation) and so far as the men are concerned, we have regarded District No. 26 of the United Mine Workers of America as representing them.

#### 1. Relationships Between Operators and Union

It is a matter of considerable satisfaction to find that the relationship between the operators and the men has improved so con-

siderably since our previous investigation. The operators have openly accepted the U.M.W. of A. as the medium of collective bargaining between themselves and the men, and have made available to them from time to time confidential data which would enable them to apprehend the financial position. The union, on the other hand, has shown a wide understanding of the responsibilities involved in collective bargaining. We believe that the large measure of goodwill and confidence which has already developed can be—and will be—still further enlarged, and that successful collective bargaining on a basis of mutual interest is assured for the future.

#### 2. Recommendations to be Read as a Whole

We have been greatly helped in our investigation by the sincere desire of both parties to have a thorough survey made of all the relevant considerations. We are also, from the attitude adopted by the parties in the course of this investigation, encouraged to believe that our recommendations—serious as they are in their incidence—will be viewed as an impartial effort to solve the fundamental difficulties of the position. These recommendations in so far as they relate to economies must not be regarded as indicating alternative remedies. The economies are necessary in their entirety.

#### 3. Periodic Adjustments

It has been the practice for the operators and the union to meet periodically for the purpose of adjusting an agreement:

(a) As to any variation in the schedule of rates, (i) from the point of view of a general wage fluctuation upwards or downwards; and (ii) from the point of view also of any alteration in individual items; and (b) as to the general conditions of service for the ensuing period.

These periodical adjustments used to take place annually, but since our last report the agreements have been for two-year periods. Since 1926 these agreements have been effected without stoppages of work. The current agreement was due to expire on the 31st January, 1932, and the operators and the union had been engaged since October last in trying to negotiate a new agreement to become effective as from 1st February, 1932. On their side the U.M.W. of A. presented a list of 138 items, including a request for an increase of 10 per cent in datal rates up to \$4 per day; and of 5 per cent for datal rates over \$4 per day, whereas on the other hand, the operators requested a graduated decrease in existing schedule rates ranging from 7 to as high as 29 per cent in others, making an overall average figure of 12·7 per cent. The operators also advanced proposals for the future development and operation of the mines on a basis of re-allocation of areas and the closing of certain collieries. The parties having failed to reach an agreement, the operators consented to keep the old agreement in force until March 1, 1932, pending the receipt of such recommendations as we might make.

## I. WAGES, AND KINDRED QUESTIONS

### 4. General Wage Fluctuation in Light of Financial Position

In our previous report we emphasized our belief that the system under which working conditions and details of schedule rates were dealt with, as well as general wage fluctuations, in these periodical adjustments, made it impossible to deal justly with either claims or counter-claims. We did not expect to get such a practical demonstration as the present circumstances give us of how right our original view was. It would have been quite impossible for us to hear and decide upon the details of the 138 items presented by the men, or the numerous changes which the employers' proposals made in long established conditions, practices and allowances. Indeed, both parties quickly recognized the risks they were running in leaving all those matters to a judgment which, although it might be independent, could only be partially instructed, and much of the evidence, therefore, was directed—and very rightly directed—to warning us of the danger of an arbitrary decision.

On the basis that all we can hope to give helpful direction upon is such general adjustment of wages as is justified by the financial position, we confine ourselves in our recommendations to what we call a general wage fluctuation, and for this purpose we have had the financial results of the operators carefully examined. We were afforded the fullest access to all the books and records of the operators.

We were glad to find that the operators had accepted certain recommendations made in our previous report, and that the coal and steel accounting had been kept separate, that the transfer price of coal charged to the steel division is fixed on the principles we suggested, that so far as the operators of the Sydney and Louisburg Railway are concerned their charges to coal operations are fair and reasonable—in fact the profits from the Sydney and Louisburg Railway are included as profits in the general coal operations—and that the rates charged by the Seaboard Power Company to the coal operations are also fair and reasonable.

### Financial Results

In our previous report (pages 31 and 32) we analysed the financial results of the coal operations of the Dominion Coal Company from 1921 to 1925. Since then there has been a financial reconstruction of the corporation and we append—appendix A—chart setting forth the present financial organization. We have examined the coal operations of the whole corporation from 1926 to 1931. For the year ending December 31, 1926, they showed a gross surplus of 6·9 per cent upon the total capital invested. (By gross surplus we mean earnings before setting aside any reserve for depreciation, or federal tax, and before paying any bond interest or share dividend of any kind.) The comparative figure for 1927 was 6 per cent; for 1928, 2·8 per cent; for 1929, 4·1 per cent; for 1930, 2·8 per cent. During 1931 no interest was earned upon any capital, but on the contrary a substantial loss was sustained. The two years, 1926 and 1927, were noticeably better than the average; but this, we believe, was largely due to increased sales and prices resulting from an exceptional demand for Canadian coal at a time when there were industrial disputes in other coal fields. The average gross surplus for the period 1926 to 1931 was 3·8 per cent on the total capital invested including bonds as capital. Since the bond obligations of the company bear interest at 5 per cent and 6 per cent, the difference between the average interest earned on capital and the amount paid to bond holders was made up at the expense of the equity of the shareholders fund. The preference and common shareholders, it might be added, have in

these six years received no return at all on their capital investment.

The financial position of the corporation makes it apparent, beyond any doubt, that the operators are justified in feeling concerned about the wage costs of the operations. Indeed, the operations during 1931 have been carried on at the expense of their working capital fund, and if conditions were to remain unchanged throughout 1932 the shrinkage in that fund would be so serious as to completely paralyze their business.

It was put to us in the course of evidence given by the men, that it was the duty of capital not to depress wages the moment bad trade appears but to carry on for a period in the hope that things would improve. In our view the operators would have been justified in approaching the union at the beginning of 1931 with a view to discussing possible ways and means of securing cost adjustments. But since their contract was a two-year contract and did not expire until December 1931, they carried during last year a wholly unreasonable loss, and a loss which, if not checked drastically now, must inevitably lead to disaster. In other words, it is clear that the company have even allowed their capital resources to be unduly depleted before they raised the question of a wage adjustment.

#### Analysis of Costs

We append—Appendix B—a cost analysis for the period 1926 to 1931 and we have made a close examination of the various items going to make up the cost. There are certain items that are outside the control of the management, among them being local taxation, which, although very heavy, seems to be in the circumstances inevitable. Of the controllable factors in the cost there are general expenditures, administration expenses and wages.

In regard to general expenditures, we find that renewals, replacements and maintenance have been very considerably curtailed during 1931, and while such curtailment was unavoidable in view of the financial position of the company, the proper maintenance of the properties is a matter of such vital moment to all interests involved in the coal field that we hope such curtailment will only be regarded as a very temporary measure. On the management expenses side, too, they have already made reductions of from 10 to 20 per cent in the salaries of all officials, and have, in other directions also cut down their costs. Only wages, remain, therefore, and as will be seen from the table, they form between 55 and 60 per cent of the total cost, while if labour charges which are included under the other items of cost were also taken into account the proportion would be higher still.

In the light of these facts, we do not believe that the men will fail to respond to what is such a patent necessity, if a continuance of a means of livelihood is to be assured in colliery operations.

#### Operators' Wage Proposals

This brings us to the actual proposals of the operators. We think it right to say at once that, while we cannot ourselves approve the method proposed by the operators for making the wage adjustments, we were impressed with the spirit which animated them in framing their proposals. They felt that, in looking for the necessary total economies, they should—in order to make the burden falling upon the lower grades the less—eliminate what they believed, rightly or wrongly, to be improper allowances, anomalies, or fortuitous advantages that accrued to the benefit of certain classes of the higher paid men. In the hope, therefore, of arriving at a fair level they examined every individual operation, as provided for in the schedules of rates, and made adjustments which would, in their view, bring their rate structure to a fair and equitable basis. As a consequence, the reductions which they proposed range from 7 to 29 per cent. This method of procedure meant, of course, a quite arbitrary sweeping aside of allowances and differentials. Indeed, in some cases brought to our notice, the allowances had been awarded after investigation by conciliation boards. It also meant the arbitrary reduction of contract rates that had been established after full discussion. In many cases these allowances and rates had been in operation for a very long period of years, without ever having been questioned. While we found, taking the witnesses as a whole, a general acceptance of the principle that the higher paid men should be asked to yield up more in order that the lower paid men might be less hardly hit, we found also that there was a very general feeling—and this feeling we shared—that many of the higher paid men were being called upon to suffer too severely.

Although we are unable to accept the scheme of wage reductions as set forth in the operators' proposals we are expressing no opinion on the merits of the allowances, differentials and rates which by their proposals they were attacking; but we are sure these cannot be satisfactorily dealt with in a general wage fluctuation. We must confine ourselves to a fair and reasonable apportionment of the savings that it is necessary to effect.

#### Wage Adjustment

We are satisfied that in the light of the financial position, as we have indicated it to be, the operators were not overstating the

amount of saving which was needed. On the average, that figure worked out at just over 12 per cent. We do not feel that we can call upon the lower paid men to bear an equal share of the savings to be effected; nor can we place upon the higher paid men a greater general reduction than 12½ per cent.

Our recommendation, therefore, is that on and from March 15th there should be a general adjustment of wages as follows:

A reduction of 10 per cent on all datal workers, with the proviso, however, that no adult datal worker be reduced below \$3.25 (this rate of \$3.25 corresponds to the rate of \$3.05 which would have been the minimum for adult workers under the company's proposal), and a reduction of 12½ per cent on all contract rates.

In making the proviso with regard to the lower paid workers, we are not expressing any view as to what a fair minimum or subsistence datal wage should be. We are, however, bearing in mind the small number of days worked per week in present conditions.

We deem it to be relevant to a proper weighing of the reduction, to state that figures supplied by the Dominion Bureau of Statistics estimate that for a family in Nova Scotia, cost of living has fallen approximately 10 per cent (as between 1926 and December 1931). The proposed adjustment, therefore, is, on the average, practically compensated for by the reduction in the cost of living.

## 5. Machinery for Settlement of Wage and Kindred Questions

In addition to the general wage alteration, the operators and the men had very numerous points to raise, both on their code of working rules and upon the schedules of rates. On these points of detail it is, as we have already indicated, not possible for us to adjudicate. Nor, as we have said, do we believe that it is possible for the parties themselves to adjust them satisfactorily in any "omnibus" settlement.

We further recommend, therefore, that from the point of view of fixing an annual agreement now, the two parties should settle the general wage fluctuation on the lines we have suggested; and should then in due course devise the machinery by which for the future they are going to determine these other matters.

### Independent Umpire

The union submitted to us a proposal that as part of the machinery for settling differences between the parties provision should be made for an umpire independent of both the company and the men to interpret the terms of their agreement. They alleged that questions often arose as to the meaning of

the agreement, and that when they failed to agree, with the operators they had no further recourse. The operators admitted the obvious unfairness of one party to the agreement having the final say as to its meaning, and the reasonableness of having questions of interpretation determined by an independent person.

From the illustrations which were quoted to us it was clear that care would need to be taken to prevent cases being raised as questions of interpretation, when, in fact, they were really questions of allowances. As an example, clause 17 of the agreement reads:

"It is agreed that during the lifetime of this contract nothing shall be done to decrease the earning power of the employee, or to increase the cost of production to the company, also it is hereby understood that no custom or condition in effect at any time can be changed unless mutually agreed to by both parties to the contract."

An instance was given us of a claim being made for an allowance because of certain alleged abnormalities in the working place. The operators' representative did not admit the abnormalities and no settlement was come to. The men pleaded that thereby the earning power of the employee had been decreased and that thus clause 17 had been violated; while the company said that if an allowance had been given their cost of production would have been increased and the same clause would have been violated. Such a case as this is not, in our view, a question of interpretation of the agreement, but a question of the practical application of the principles underlying it.

As we understood the men's case, however, they desire that the umpire should also be empowered to deal with questions that are more the practical application of the agreement than the interpretation of it, and we have thought it wise to consider this subject from that aspect.

We would divide wage questions—as distinct from the conditions of service—into three categories:

- (1) General wage fluctuations;
- (2) Schedule rates of general application either to a pit or groups of pits; and
- (3) Special rates or allowances that are purely local in character in the sense that the special rate or allowance is being claimed because of some abnormality which distinguishes the conditions from those for which the ordinary rate of the pit in question was fixed.

This third class of case is one which, we think, is suitable for independent determination when the two parties cannot agree. It frequently happens that something arises for

which no specific provision is made in the schedule, for it is not possible in mining to contemplate and provide beforehand for every conceivable departure from the normal. Questions belonging to this third class might automatically go to an umpire for settlement in the event of a difference which could not be adjusted between the management and the men. Stated in another way, while general wage fluctuations and schedule rate structures are—like the conditions of service—fundamental matters which neither party may feel disposed to leave the automatic determination by an outside person, questions of allowances or special rates for abnormal conditions which it is alleged the rate schedule does not cover might well be dealt with by an independent person (in the event of failure to agree between management and men).

We recommend, therefore, that the operators and the union should deliberate upon the extent to which within their arrangements proper use can be made of an independent umpire jointly appointed, and if—the principles being accepted—they fail to agree upon a person as an independent umpire, or upon the terms of his appointment, the chief justice of the supreme court of Nova Scotia should be asked to appoint or settle the terms of the appointment, as the case may be.

We state, as a general principle, that equality of opportunity for earning is just as much thrown out of balance by unfair allowances or rates being conceded, as it is by fair allowances and rates being withheld where the working conditions justify them. This principle the independent umpire would constantly bear in mind.

### **Conditions of Service and Schedules of Rates**

Provision being made for an independent umpire to settle in the last resort the class of case we have described, conditions of service and the schedules of rates would remain as a permanent structure to be amended by mutual agreement only when some fundamental change has taken place; or at wide intervals of time when opportunity would be given to review items in the schedules which experience had shown were either too high or too low.

### **Regulation of Wages**

On the subject of general wage fluctuations we would urge the parties to consider afresh the recommendations we made in our former report as to automatic regulation of wages in relation to profits.

## **II. RE-ALLOCATION OF COAL AREAS AND CONCENTRATION OF OUTPUT**

### **Future Economic Development of Mining Areas**

The savings that will accrue from the proposed wage adjustment are vitally important from the point of view of the immediate financial stability of the coal operations. As important, however, not only for the present but for the future economic development of the coal area of Nova Scotia, are the savings which the operators hope to achieve by their proposals for the re-allocation of areas and concentration of output. By lessening the number of working outlets and increasing the frontage of area available to an establishment they will ensure more regular employment for those engaged and will effect considerable savings in surface labour, power and underground maintenance.

There can be no doubt that the irregular employment from which the pits have suffered is largely due to the fact that the operations are too widely spread. Productive capacity is far ahead of any present or prospective market demand, and, as a consequence, the output is being spread over too many pits. A larger number of pits are being worked a fewer number of days per week instead of a fewer number of pits being worked more regularly. It is true that by this means more men are being given employment; but the pit days worked are fewer and the average weekly earnings of the men, therefore, are lower. Last year, for example, the average number of days worked per pit was only 140; and, under present trade conditions, on the same distribution of output during 1932, the position would be no better. This system of working has two results. It brings all the men employed in the collieries down to an artificially depressed level of weekly earnings—wage rates meaning nothing on days when there is no work—and it also very greatly adds to the costs of producing the coal. The burden placed upon costs by the idle days during 1931 is estimated at 2½ million dollars or about 60 cents per ton.

It is quite wrong to say that this is a temporary condition arising from the trade. On the contrary, it has become a fundamental defect in the development of the coal fields—we alluded to it in our previous report—and in its incidence both on costs of operation and on weekly earnings of the men is a continuous burden which only becomes more noticeable in depressed times. The increasing cost of mining coal in these areas is indeed a very alarming feature.

### Output and Numbers of Men

We append a table—appendix C—which shows how the numbers of men employed have grown from 1926 till to-day, and the rising costs per ton of output. The costs have increased in these six years by 55 cents per ton. From the table it will be observed that whereas in 1926 an output of 5,396,000 tons was obtained by 9,820 men working 230 days per man, the number of men employed in 1931 was over 11,000 working 140 days per man for an output of only 3,874,000 tons. It is clear, therefore, that even if markets could be made available for another million tons of coal there would still be too many men in the pits. This is a condition that is well known to the men themselves, and throughout the evidence we had repeated admissions that there were too many men engaged in the operations.

We are not overlooking the immediate consequences of curtailment of manpower in the pits, and will refer to that aspect later.

### Operators' Proposals

But first let us take the proposals of the operators in this respect. They propose for the future to concentrate production in fewer pits so that for normal working they will have a producing capacity of  $5\frac{1}{2}$  million tons per annum, and will be able when trade grows beyond that figure to enlarge their production from the same number of pits, by double shifts where necessary, to a figure of approximately 7,000,000 tons. The largest output the corporation's properties have ever had during the last 20 years has been  $6\frac{1}{2}$  million tons (in 1913), and the average output over those 20 years has been 5 million tons; during the last ten years their highest output has been 5·7 million tons (in 1927), and the average for the last ten years had been  $4\frac{1}{2}$  million tons.

The details of the proposals are as follows:—

1. Glace Bay district—Pits Nos. 1B, 2, 4, 10, 11, 24. Here the proposals fall into two parts:

(A) Nos. 1B, 2 and 4. Those collieries produce from the Phalen seam, and the sea frontage in the Phalen seam of the Glace Bay district is approximately 7 miles. The workings are wholly submarine, all the land areas having been worked out. It is proposed to relinquish No. 2 colliery as a producer of the Phalen seam and apportion out its two miles of sea frontage between Nos. 1B and 4 collieries, the reserve barrier between 2 and 4—which is considered to have outlived its usefulness—being disposed of as such and included in the above apportionment. At the same time it is proposed to develop the overlying harbour seam through tunnels driven from No. 2 mine. This proposal is purely one

of rearrangement, the sea frontage of 1B and 4 being increased from 3 miles to 3·6, and from 2 miles to 3 miles respectively, while the harbour seam will be allocated to No. 2 colliery. This scheme will take 6 years to complete. The re-arrangement proposed does not affect the daily tonnage and the number of men employed will remain practically the same. The scheme when completed will effect a saving of 26 cents a ton on an output from these three collieries of  $2\frac{1}{2}$  million tons per annum.

(B) Nos. 10, 11 and 24. Those pits work the Emery seam with a frontage of 5 miles, No. 10 colliery being  $1\frac{1}{2}$  miles distant from No. 24. It is proposed to abandon No. 11 colliery, which is sandwiched in between Nos. 10 and 24 and separated therefrom by inter-colliery barriers. No. 11 has a restricted frontage and has been advancing towards the sea at the rate of 500 feet a year to win coal which is readily accessible to either No. 10 or No. 24 collieries. The continued diminution in the height of the seam would eventually reach an uneconomic point in the area of partial extraction. It is proposed to allot the territory it otherwise would have worked to Nos. 10 and 24 collieries.

The output of No. 10 colliery will be increased up to 2,000 tons per day, and the mine will be fully electrified and brought into line with modern practice. The number of employees on the payroll at No. 11 colliery is 915, and approximately that number will be permanently displaced as from August, 1932. The savings are estimated to be 12·6 cents per ton of Dominion Coal output, on the basis of 1931 operations.

2. New Waterford—Nos. 12 and 14. These two slopes, one mile apart, work the harbour seam in the Waterford district. Their under-sea frontages are 1·7 and 1·6 miles respectively. It is proposed to consolidate the workings of No. 14 colliery with those of No. 12 colliery and rearrange the eastern and western inter-district barriers, the final outcome being to give No. 12 colliery a sea frontage of 3·5 miles. It is proposed to close No. 14 colliery. The operators point out that the juxtaposition of the two collieries results in overcrowding of the district with an unnecessary number of main roadways for the limited sea frontage. The proposed consolidation and the avoidance of duplication in plant and airways will considerably reduce both capital expenditure and maintenance. It is proposed to connect Nos. 12 and 14 collieries underground and to make use of the constructed main roadways in No. 14 colliery as return airways for the east side workings of No. 12 colliery. The proposals will bring about the simplification of the ventilation problem of distant submarine mining and obviate the present urgent need of large

expenditures on airways. After merging the areas it is proposed to build up the output of No. 12 colliery to 2,800 tons per day for a double shift operation, and the stoppage of production in No. 14 colliery will promote steadier operations leading to a greater stability of production and employment. It is proposed to put this rearrangement into force in May, 1932, and approximately 750 employees will be permanently displaced. The number of days worked by No. 14 in 1931 was 125.

The savings are estimated to be 14.4 cents per ton of Dominion Coal output on the basis of 1931 operations.

We should add that the operators estimate that with collieries 11 and 14 closed the number of days worked by the other Dominion collieries in 1931 would have been 158 instead of 131.

### 3. Sydney Mines—Princess and Florence

The Sydney Mines district working the Harbour Seam has two collieries—Princess and Florence. The district area is bounded on the east side by the Waterford inter-district barrier. On the west side the workings are terminated by the coal diminishing to an unworkable thickness and becoming interspersed with bands of stone. The undersea frontage comprises a width of 4 miles, a distance which, in view of the operators, has been proved by experience to be insufficient for two collieries. Florence colliery, to continue in operation, must continually advance to the deep, and a large outlay would have to be made for a new bankhead, relay hoist, transfer roadway and airways. This outlay would not, in the view of the operators, bring in any return; but on the contrary costs would continue to rise with the advance of the workings under deeper cover. Any money spent on Princess colliery for mechanization or increasing the output would be remunerative. The company's proposal is to close Florence colliery probably within the next two years, the actual date being determined by circumstances as they arise, and to concentrate upon Princess colliery. It is estimated that at the end of two years Florence colliery will not be employing more than 550 men and that, therefore, will be the number displaced, when this colliery is closed, as a result of the proposal—at the end of 2 years, say May, 1934. The savings are then estimated to be 29.1 cents of the Nova Scotia Company's output on the basis of 1931 operations.

Note: The company's proposals as regards Glace Bay, Waterford and Sydney areas have been very carefully planned. We have had the advantage of reading a report upon them

by Mr. Foster Brown, a recognized British authority on mining development who acts for the British government in the department of woods and forests, and who has in addition a full personal knowledge of the Nova Scotia mines, as well as a wide experience of submarine mining elsewhere. The proposals have his full approval not only from the point of view of the economic future development of those areas, but in the interests alike of operators, men and lessors.

### 4. Acadia—Allan, Albion and Acadia No. 3 Mine

The operators propose to close Acadia No. 3 mine situated at Thorburn. This mine was opened originally in the year 1884, was closed from 1914 to 1918 and then reopened. The thick coal, we are told, has long since been worked out leaving the thinner coal on the fringes of the field, the average height of the coal now mined being rather under 3 feet. Although the exact limits of workable coal have not been defined the operators say that a moderate estimate would be that not more than 400,000 tons could be taken from this mine or about 4 years' operation on a normal time operation. The limited demand for this class of coal, however—and this is reflected in the idle time experienced—might cause its continuance in the ordinary course for a long period. The surface arrangements are of an elementary character and there is no provision for screening the coal. The mine makes a large quantity of water and the pumping is a very heavy burden on the costs of the mine, particularly when it is only working a few days per month. The evidence disclosed some controversy as to the quality of the coal, but we are satisfied that the operators have not exaggerated the difficulties of marketing this product. Employment at Acadia No. 3 had fallen off towards the end of the year 1931 to 7 or 8 days per month, and in the view of the operators, by closing it the employment at the Allan and Albion mines could be improved by, at least, 1 day per week, basing upon the 1931 output. The number of employees that will be displaced by closing Acadia No. 3 is 300, and the savings effected by closing the mine would represent roughly 38 cents per ton on the production of the area. The operators proposed to suspend operations in May, 1932.

### 5. Springhill

The operating mines at Springhill are three in number namely, 2, 6, 7. The quantities of coal remaining to be worked, and the life of Nos. 6 and 7 mines are estimated by the operators to be as follows:

Colliery	Tonnage available	Life Years
No. 6	500,000	1 1-2
No. 7	130,000	1 1-2

The operators propose to suspend operations in No. 6 mine in May, 1932, until such time as No. 7 is worked out, after which operations will be resumed again in No. 6 mine.

The suspension of operations in No. 6 mine would involve the permanent displacement of 275 men. It was pointed out to us that substantial expenditure had already taken place on the development of a new No. 4 mine in this area; but that the development, although considerably advanced, had had to be suspended owing to the present financial stringency. The operators, in view of their experience with bumps in No. 2 mine are anxious to proceed at the earliest possible moment to complete this development of No. 4 mine. The economies which they estimate from the closure of No. 6 are seven-tenths of a cent per ton.

All these proposals, from the displacement of labour point of view, may be summarized as follows:

	Men
As at 1st May, 1932, No. 14 colliery, (Waterford) . . . . .	750
As at 1st May, 1932 Acadia No. 3 mine (Thorburn) . . . . .	300
As at 1st May, 1932, No. 6 (Springhill) . .	275
As at 1st August, 1932, No. 11 colliery (Glance Bay) . . . . .	915
As at 1st May, 1934, Florence (Sydney Mines) . . . . .	550

### Public Representations

The operators' proposals have naturally caused great concern in the towns immediately affected, and we received protests from Glance Bay, New Waterford, Sydney Mines, Thorburn and Springhill. Municipal representatives, prominent local residents, boards of trade and representatives of the men all informed us of the grave situation that would arise not only for the men displaced but for the municipalities in which they lived, since in these towns there is no alternative industry in which even in busy times employment could be found. We were surprised not to find evidence of greater effort on the part of the municipalities and other local authorities to attract alternative industries. As things are at present, of course, it will not be easy for the men to find employment even away from these towns.

We have given the most anxious consideration to these representations for it is a matter of the most serious moment, particularly for those of the men who have become estab-

lished there, owning their own houses, and being heads of households. What these representations amount to, however, is that the mining industry of the province should be called upon to sustain a greater number of men and a greater number of pits than it needs for its requirements or can economically afford. It is a burden which we have no hesitation in saying colliery operations in those coal fields cannot sustain. If the municipalities, and the Province, and the Dominion cannot solve the problem that arises from the necessity for this displacement then clearly much less can the mines do it.

### Conclusions

The only possible result of colliery operations attempting to maintain themselves on the basis of a labour force and a productive capacity so far in excess of anything that is economic must be collapse which, by the nature of things, would be much more disastrous than the proposed restriction of operating area and labour force can be. We should be shirking our responsibility if we did not make it quite clear that, in our view, the proposals of the operators should be adopted and enforced and we recommend accordingly.

No political or social obstacles should be put in the way of this effort of long-range development of the coal properties on a sound economic basis both of output and employment. Nor should countenance be given by the provincial government, who own the minerals, to any suggestion that independent operators should be allowed to work any of the pits that are closed by the proposals. The present over-capacity of production (to which the independent mines contribute also) has been—apart from cost—a depressing factor on coal marketing conditions even in the maritimes. Economic development is of more importance to the Nova Scotia coal fields than the exploitation of practically exhausted areas; and it is, in our view, a fortunate circumstance in present conditions that such a high percentage of the mining operations are within one control, and that it is possible therefore quickly to accomplish a replanning of operations on a sound basis.

We are satisfied that the proposals of the operators have been prudently and moderately framed and that it is the only way to restore these coal fields to a prospect of successful economic development. The savings which will be achieved immediately—within this year they will reach 21 cents per ton—are important from the point of view of more quickly enlarging markets and providing more regular employment for the men whose livelihood will still be in the pits. They are no less impor-

tant from the point of view of allowing Nova Scotia coal to play a greater part in Canadian markets as trade revives, and from the point of view also, of giving the province a greater moral authority in pleading for a Dominion fuel policy which—as the union representatives urged—will enable this basic industry to prosper and expand. Already considerable help—to which we will refer later—has been given by Dominion authorities in the marketing of Nova Scotia coal in Quebec and Ontario; but it must be unreasonable to expect unlimited support to be given irrespective of cost efficiency at the pits. We venture to say that the need for decreasing colliery costs is from every point of view imperative.

It is estimated that when the proposals of the operators are in full effect within the next six years they will mean a saving of approximately 60 cents per ton of the output. To effect these savings it will not be necessary over that period to expend much more capital than would be necessary if development were to continue on present lines. Had such a policy of long planning been possible earlier, and had these economies been effective to-day, it is not, we believe, any exaggeration to say that a market for at least another million tons of output would have been available now, even without an adjustment of wages.

### Springhill No. 6 Excepted

There is only one respect in which we feel disposed to recommend that the company's proposals be not adopted, and that is with regard to the closing of No. 6 mine at Springhill. It is reckoned that it has only a year and a half to run, and the estimated saving in this particular case is only seven-tenths of a cent per ton. However carefully savings have been estimated, a certain margin must be allowed for contingencies.

Even a small margin of error in the estimate on the unfavourable side would make this particular saving disappear altogether. We do not feel that the social derangements which would arise from putting the proposal into effect at No. 6 colliery are worth the very small saving estimated in this case even if it were realized in full. We believe the right course is to hurry on at the earliest possible date the development of the new No. 4 mine, a development which the operators themselves regard as of great importance to their operations at Springhill.

In every one of the other cases the savings are, in our view, of sufficient importance fully to justify the step being taken, and in the interests not only of the men who remain in the pits but in the interests of the mining communities as a whole, no impediment what-

ever should be placed in the way of the operators' proposals being proceeded with in any of those other districts.

### Recruitment of Young Persons

As things stand at present recruitment of young people for the mines is being impeded; but there is no alternative open to the operators but to slow down their fresh starts while they have already too many men employed. The result is that in each of these communities there are, as the evidence showed, a very considerable number of young persons up to 21 years of age—the number may be as high as 2000—who have never had employment at all and for whom no prospect of obtaining employment in the mines lies ahead. From the point of view of the future of the communities, therefore, it is very important that the labour force in the mines should be brought down to a point that permits the ordinary flexibility to operate normally whereby as the older men go out the younger come in.

Appendix C shows how, as the numbers employed become disproportionate to the output, fresh starts soon begin to diminish in number. On the average the normal labour turnover in these pits is approximately 10 per cent. Even this figure is low, and its lowness is to be explained on the same basis as the mounting numbers on the payroll, namely, the geographical isolation and the absence of alternative industries. Thus, to maintain say 9,000 men in the mines, 900 go out and are replaced each year.

It is eminently desirable in the interest of the rising generation that this normal labour replacement should begin to function again; but, even then, as the population in the mining communities goes on increasing, it cannot be hoped that all the young people coming up will find employment in the mines. The position in this respect seems likely to continue and grow worse. Periods of brisk trade will give temporary relief. Depressions make it more acute. This is a problem that deserves the attention of the governments of the Province and the Dominion.

### Displacement of Employees

The displacement of employees as a result of the re-allocation proposals also raises a problem which the constituted authorities must consider. It does not fall within our province; but we have two observations to make on it.

First: Those displaced will not necessarily be those now at work in the pits that are to be closed. The operators, as well as the union, should keep in mind that preference of em-

ployment should be given to those of their men who have been a long time with them and are established in their homes.

Second: We took advantage of the fact that a land settlement committee was meeting in Halifax during our sessions here to discuss with them the prospect of farm settlement. We learned that on a survey recently made in Nova Scotia, it was found that a not inconsiderable number of miners had practical experience of farming, and might be prepared to revert to the land, although in many instances they would need some financial assistance in taking up farm settlement.

From another witness we heard that in certain other branches of mining elsewhere in Canada there was expanding employment.

### III. COSTS OF PRODUCTION, TRANSPORTATION AND MARKETING

#### 7. Costs of Production

We have already drawn attention to the alarming increase in costs of production. Reference to appendix C shows that between 1926 and 1931 there has been an increase of 55 cents per ton.

The wage adjustment will give immediate temporary relief and the re-allocation proposals, when fully operating, will give a more permanent relief. But we do not think the situation is fully met by these measures. The aim must be to place the collieries upon such an economic basis that both operators and men will ultimately be able to participate fairly in more prosperous times. It is necessary, therefore, that the operators and the union should co-operate to eradicate uneconomic practices and to correct anomalies and other controllable causes of high prime cost.

#### Longwall System

There is one subject in this connection to which after considering the evidence we should like to draw special attention, and that is the longwall system. In 1925 we were told that when the longwall system of working became more general a much higher standard of cost efficiency would be reached, and we are very disappointed to find that this system—although quite widely introduced—has not achieved the economies that were expected.

At the time of our last report, the proportion of the outputs of the mines under the longwall system was only 2.6 per cent of the total. To-day 36 per cent of the total output of the corporation is mined on the longwall system and in some of the pits—notably Dominion No. 12, Princess, Florence and Springhill No. 7—practically the whole of the output is mined on this system.

We are not overlooking the fact that, in some cases, the system has been introduced where production would have had to be abandoned because of the impossible cost that further development on the room and pillar system would have meant, and that in these cases it is hardly fair to compare costs under the longwall system with previous costs under the room and pillar system. Nor are we overlooking the fact that the successful working of the longwall method in these pits where the roof is somewhat tender suffers severely from idle days, since the roof conditions get out of control and involve extra labour and expense for support.

But when we have said all that, the fact remains that an examination of the earnings made by the contract men on longwall operation in certain of the mines would lead us to expect a larger output per man than has in fact been achieved and we would strongly urge that the operators and the union should themselves closely investigate the workings of the longwall system from the point of view of reaching an economic cost efficiency.

#### Labour Proportions

We must add also that we are advised that the proportion of other underground workers generally in this coal field as compared with the men on the face, is unduly high and here also we urge that both the operators and the union examine the position with a view to a remedy.

#### 8. Transportation and Marketing

The general depression in trade has seriously affected the Nova Scotia coal output, so that, whereas from 1926 to 1930 the average output per annum of the corporation's mines was 5,419,000 tons, in 1931 it fell to 3,800,000.

This general trade depression was, we feel, somewhat overlooked in much of the evidence which we heard from the men's side on the question of markets. Suggestions were made that for some reason or other the corporation's policy was to restrict their output and to refrain from pushing their markets in the St. Lawrence ports as fully as they might. We deemed it advisable to hold sittings in Montreal where the whole of this aspect of the situation could be fully explored, and on the evidence we are glad to be able to say that all suggestions of this kind are, in our view, quite erroneous.

The organization of the operators for promoting the sale of their product is well framed. It is, of course, difficult to increase the sale of such a basic industrial commodity as coal at a time when—apart from outside competition—the demand for it is temporarily upset by a

general depression of trade, particularly when its costs have not only remained high but are increasing. Indeed, the problem for the operators from time to time has been just how far to go in selling at a loss in order to provide employment and minimize the costliness of idle days at the pits. Our own view is that if they have erred at all it has been on the side of risking too much loss on their sales in order to keep the pits employed. We are satisfied that the interests controlling the affairs of the corporation have been straining every nerve to find markets—their contacts have been very valuable—and to keep the pits working as many days as possible. We closely examined the sales made in the St. Lawrence ports; and, judging from a purely money point of view, it might in fact have been better for them not to have taken some of the contracts, which they felt themselves compelled to take from the point of view of keeping work going.

The fact appears to be that approximately 90 per cent of the bituminous coal sold in the St. Lawrence market is from the Nova Scotia coal fields, if we exclude the Canadian Pacific Railway and the Montreal Coke & Manufacturing Company.

We append a table—appendix D—showing the shipments and destination of coal from Nova Scotia for the years 1926 to 1931. Whereas in the six years, 1920 to 1925 inclusive, the average annual sales of Nova Scotia coal in the St. Lawrence market were a little over a million tons, the average for the six years, from 1926 to 1931, has been almost 2½ million tons per annum. For the year 1931, the sales were 1,800,000 tons, which, in our opinion, in the light of the general trade depression is not unsatisfactory.

The help which the coal field has had from transportation subventions and reduced transportation rates has, for 1931, been less apparent because of the lower market demand generally; but it is not too much to say that without this help the corporation would have sold approximately 400,000 tons less in the Montreal market in 1931 than they did.

From the evidence we received we feel sure that as colliery costs are reduced a still wider market will be available to Nova Scotia coal. As we have already said, we believe that if economies of the amount which will ultimately result from the re-allocation proposals were in force, there would be available a market for at least another million tons of Nova Scotia coal. We venture, therefore, to say to the operators and the men that it is their duty to concentrate upon a reduction of working costs in order to encourage the people in Quebec and Ontario who are thoroughly sympathetic to maritime interests and are anxious to help.

### Railway Coal

We had the advantage of interviews with the heads of both great railway companies. The Canadian National Railway is already a very considerable consumer of Nova Scotia coal, meeting all their requirements from Montreal eastwards—and some of their requirements from Montreal westward—with the product of Nova Scotia mines. We are satisfied, too, that they have given a preference in price to Nova Scotia coal and as compared with what they might have bought coal for from outside sources. They are anxious to help even more, and any considerable reduction in costs of production will enable them to give this further help.

From discussions we had with the Canadian Pacific Railway we find that they are now prepared to consider a basis of comparison between Nova Scotia coal and coal from outside sources which will be more favourable to Nova Scotia coal than the basis of comparison which, according to railway practice, has hitherto prevailed. The more that costs can be reduced the greater will be the measure of help obtained from this source.

### 9. Utilization of Coal for Coke

At the outset of our inquiry we were very disappointed to find that the expectations which we had formed in 1925 as to the possibilities of an enlarged market for coking purposes had not been realized. In preparing that earlier report we had had the advantage of full discussions with representatives of the Dominion Fuel Board, and our conclusions were based upon the estimates which they had prepared. We find that in the intervening years only two coking plants have been established, namely, at Halifax and Quebec, to take advantage of the Domestic Fuel Act, and that the only other new plant established, namely, at Montreal, did not take advantage of that Act and has not been a purchaser of Nova Scotia fuel.

In Montreal we had the situation explored with the operators of the La Salle plant of the Montreal Coke & Manufacturing Company, and paid a visit to the plant. The coking plants at Halifax and Quebec meet all their requirements from Nova Scotia coal. They are primarily gas plants, however, producing coke as a by-product, and this coke is suitable for local needs. There appears to be no question in the minds of all qualified authorities that Nova Scotia coal can produce coke of first-class quality; but at Montreal, as it was explained to us, the La Salle plant was established primarily to produce coke, and to produce a quality of coke that would displace

anthracite as a domestic fuel. The operators of that plant felt that the special commercial problem before them was to produce a coke which would, from a domestic consumer's point of view, behave much as anthracite did, and would, therefore, so far as the household furnace was concerned, not involve any serious departure from established practice.

What they felt was needed to replace anthracite was coke which would reduce to free ash, as anthracite reduces to free ash, rather than a coke which produces an ash that clinkers as Nova Scotia coal does. They are satisfied from the uphill fight they have had to replace the use of anthracite—so strong is the force of habit—that their policy was a wise one, and that if they had attempted to substitute a coke which produced a clinker they would have failed. From this conclusion, we see no reason to differ. The problem, therefore, becomes one of determining to what extent Nova Scotia coal can be mixed with coal from outside sources to meet the specification which the La Salle plant operators feel it necessary to lay down as an indispensable condition. The Dominion Fuel Board in association with the La Salle plant have conducted a considerable number of experiments and both appear satisfied that a specially prepared coal from certain of the Nova Scotia mines can be used to the extent of 33½ per cent. The storage conditions at the La Salle plant can likewise be met by this specially prepared coal but could not be met with certain other coals from Nova Scotia mines, or unprepared coal. The cost of Nova Scotia coal—and the process of preparation adds considerably to the cost—is, of course a matter of considerable moment to the operators of the plant, and they feel that the Domestic Fuel Act should be so amended as to enable its advantage to accrue to their purchases, since it is not possible for them so to conduct their operations as to enjoy the advantage of this Act as it stands. As at present, the provisions of the Act are only available if over 50 per cent of Nova Scotia coal is used in such coking plants, and it was urged that the bonus should be a straight bonus of so much per ton of native coal so absorbed.

As the present Act expires in 1932, we feel that the provincial government should urge that Dominion assistance should take such form as would enable Nova Scotia coal to be utilized by the La Salle or similar plants in the quantities they can use. In the case of the La Salle plant it will mean a consumption of something like 150,000 tons per annum, and in order to completely establish the possibilities of Nova Scotia coal, the Montreal Coke and

Manufacturing Company has already placed an order for Nova Scotia coal to the extent of 40,000 tons.

We have had again the advantage of full consultation with representatives of the Dominion Fuel Board, and with them we feel bound, in the light of experience at Montreal, to modify the views we expressed in 1925. But even with that modification the fact still remains that there is a considerable market for Nova Scotia coal for the purpose of producing coke, if the conditions attaching to Dominion assistance are altered as we suggest.

#### IV. GENERAL CONDITIONS

In our previous report we dealt fully with social and domestic conditions in the mining communities, and we do not feel it necessary on this occasion to go into those matters again, since any evidence we heard in this connection was really incidental; but we do feel bound to reaffirm what we said in our last report with regard to:

- (a) The constitution of a fund which can be administered for purposes connected with the social well-being and recreation of the workers in and about the coal mines, and with mining education and research; and
- (b) The check-off system.

We would refer to pages 45 and 46 of our last report.

We desire to record our indebtedness to our financial advisor, Hon. Gordon W. Scott (of Montreal) for invaluable assistance and advice in all matters appertaining to the financial and commercial aspects of the situation; to our technical advisor, Mr. William Armour (of the mines department, Great Britain), for his exhaustive examination of the technical aspects of the operators' proposals, and for his careful advice in these and other practical matters; and to Mr. L. W. Fraser for much help in many directions.

Signed:

ANDREW R. DUNCAN.  
H. P. McPHERSON.  
J. W. McMILLAN.

L. W. FRASER, Secretary.

Appendix A consists of a chart of the financial organization of the Dominion Steel and Coal Corporation, Limited.

Appendix B gives an analysis of the cost of the coal operations of the same company for the years 1926 to 1931 inclusive.

## CANADIAN NATIONAL RAILWAY EMPLOYEES' BOARD OF ADJUSTMENT No. 2

### Summary of Recent Decisions

REPORTS have been received of eight cases recently settled by the Canadian National Railways Employees' Board of Adjustment No. 2. An account of previous cases was given in the *LABOUR GAZETTE*, October, 1931, page 1069, and in previous issues. The issue of August, 1930, contained a general summary of the proceedings of the Board, covering the period from January 1, 1928, to December 31, 1929; and a similar summary of proceedings from the date of the inception of the Board to December 31, 1927, appeared in the issue of October, 1928, page 1060.

The Canadian National Railways Employees' Board of Adjustment No. 2, was established for the purpose of disposing of outstanding grievances or disputes that might arise from the application, non-application, or interpretation of the schedule of working conditions for "Clerks and Other Classes of Employees as herein named," which are not adjusted between the officers of the railway and the representatives of the employees. The members of the Board are appointed for a term of one year, subject to reappointment. The Board is composed of four members selected by the management and four members selected by the representatives of the employees concerned. The decisions of the Board are binding upon the parties to the agreement. Provision was made in the agreement constituting the Board for the appointment of an arbitrator in any case in which the Board might be unable to agree upon an award. Up to the present time in only one case has it been found necessary to appoint an arbitrator.

#### Case No. 78—Operating Department (Atlantic Region).

Two freight checkers at Moncton, N.B., claimed that their rate of pay had been reduced in violation of Article 11, Rule (b) of the schedule for Clerks and Other Classes of Employees. The claim was heard in August, 1931, but was referred back for further evidence. Subsequently an amicable settlement was reached by the parties concerned, and the case was then withdrawn.

#### Case No. 79—Operating Department (Central Region)

On Labour Day, 1931, a classified labourer employed at a roundhouse at Toronto was temporarily assigned to relieve the storeman,

whose wage scale was \$115 a month, with time and one-half for public holidays. He claimed payment for the day at this rate, instead of at the labourer's rate he had received. The Company contended that Article 8, Rule (c) of the Clerk's schedule provided that monthly rated employees (such as storemen), when required to work on holidays, shall be paid at the hourly *pro rata* rate for the time actually worked; and that the claimant, while working as a storeman, had been rated as a monthly employee and paid accordingly.

The Board denied the claim of the employees.

#### Case No. 80—Operating Department (Central Region)

When heat was required at Hamilton roundhouse during the fall of 1931, instead of lighting up the stationary boilers, a locomotive was attached to a steam line and used for the purpose of heating the roundhouse and offices and hostlers were assigned to fire this locomotive. The employees claimed that this work should have been performed by stationary firemen or classified labourers at stationary firemen's rate of pay.

The employees referred to the decision of the Board in Case No. 70 (*LABOUR GAZETTE*, April, 1931, page 399) sustaining the employees' claim under similar circumstances, "to the extent that one classified labourer on each shift be paid the stationary firemen's rate," etc.

The company argued that the present case differed from Case No. 70, in which the question at issue was the rate of pay at which classified labourers should be compensated under the circumstances, not the class of employee who should be required to perform the work. It was claimed further that the Company was not obliged by the agreement to use stationary firemen or classified labourers, and was free to employ hostlers.

The Board sustained the employees' claim to the extent that when in future locomotives are connected to steam line in roundhouse at Hamilton to supply steam usually supplied in winter by the stationary boilers, and steam for such purposes is so supplied for two hours or more on the shift, that a classified labourer shall be paid at stationary fireman's rate for such shift.

**Case No. 81—Operating Department (Atlantic Region)**

The position of general foreman having been created at Charlottetown the Company appointed a man who was qualified for the duties, but it did not first bulletin the position or award it to the senior qualified applicant, in accordance with Article 3, Rule (d). This course, in the employees' opinion, should have been followed. The Company pointed out that no objection was raised by the employees until a year and a half later.

The Board sustained the claim of the employees.

**Case No. 85—Operating Department (Atlantic Region)**

The freight office staff at Amherst, N.S., formerly worked 8½ hours per day five days per week, and five hours on Saturday morning in order to have Saturday afternoons off duty. This arrangement was in accordance with Article 6, Rule (d) of the Schedule. On January 1, 1932, the company changed the hours of assignment of these employees to eight hours each day, including Saturday. The company contended that the new arrangement did not violate the existing rate which provided that "when the interests of the Railway shall not suffer thereby," Saturday afternoon may be allowed monthly rated employees, in which case service in excess of eight hours per day for the previous five days may be required. Attention was called to an agreement, made on August 1, 1931, which provided that the existing schedule conditions should continue, and that monthly rated employees should "lay-off" one-half day per week. The employees maintained that the former arrangement should continue.

The Board sustained the employees' claim to the extent that their former hours of assignment be restored, as it was contrary to the spirit of the agreement of August 1, 1931, to release employees one-half hour per day.

**Case No. 86—Sleeping, Dining and Parlour Car Department (Central Region)**

A porter who was temporarily assigned to a sleeping car running between Toronto and Ottawa was assessed 60 demerit marks for having detained four passengers at wrong stations, and a month later he was discharged from the service. The employees claimed that these penalties were excessive considering that the porter was young and inexperienced and that this was his first offence.

The Board sustained the employees' claim to the extent that the discipline should be reduced from a total of 60 to 40 demerit marks, and that the porter should be restored to his former status in the service.

**Case No. 87—Sleeping, Dining and Parlour Car Department (Central Region)**

The dining car employees at Toronto objected to a change made by the Company in April, 1931, in the composition of café car crews on the run between Toronto and Ottawa, operating in buffet service, and with respect to the monthly relief allowed to these employees. The running time of the trains was then reduced from 6 hours and 45 minutes to 5 hours and 45 minutes, and the "lay-over" or monthly relief of these crews was reduced from 8 days to 6 days per month. The usual autumn changes in the schedule, which took effect later resulted in an increase of half an hour in the running time and the employees claimed that their former monthly relief of eight days should then be restored to them. Further, early in 1932, the staffs in each café car were reduced to three, namely a steward-waiter, a buffet-cook, and a waiter, and the employees protested against the elimination of the stewards. The management contended that Article 15, Clause (6), which governs these matters, specifically mentioned that the conditions laid down were to be effective "under normal conditions," and that latitude was therefore permitted.

The Board sustained the employees' claim that the crews assigned to the café cars operated in buffet service between Ottawa and Toronto should be composed of a steward, buffet-cook and a waiter, and that the employees who have been in charge of the cars since the date of the change should be paid the schedule rate applicable to stewards.

**Case No. 88—Sleeping, Dining and Parlour Car Department (Central Region)**

Nine standard car porters and nine tourist car porters were formerly assigned to the Montreal-Winnipeg run, but on November 22, 1931, the running schedule having been speeded up, the hours of duty on each run were reduced, and the management reduced the number of porters to eight instead of nine. The employees claimed that by this arrangement eight employees were arbitrarily required to do the work of nine. The Company explained that the change had been made after discussion with the General Chairman of the Central Region, as representing the General Committee, who had reported that a number of the porters on the run had stated that an assignment of eight porters would be sufficient. The management considered that the change was fully justified, and that no hardship had been created for the porters thereby.

The Board denied the claim of the employees.

## STRIKES AND LOCKOUTS IN CANADA DURING FEBRUARY, 1932

THE number of strikes and lockouts in existence in Canada during February was seventeen, as compared with eleven the preceding month. The figures recorded as to numbers of workers involved and time loss incurred were correspondingly higher than in January, due largely to the occurrence during the month of several strikes of coal miners in western Canada, each of which involved from two hundred to three hundred workers, and to the occurrence of a strike of women's clothing factory workers in Montreal, P.Q., which, while of only two day's duration, involved 1,500 workers. In comparison with the figures for February, 1931, almost twice as many strikes and lockouts were recorded. The number of workers involved and the time loss incurred showed a less substantial increase, however, as for several days during February last year some 1,700 women's clothing factory workers were involved in a dispute at Toronto, Ont.

Date	Number of disputes	Number of employees involved	Time loss in working days
*Feb., 1932..	17	3,611	14,679
*Jan., 19 2..	11	1,044	10,729
Feb., 1931..	9	2,066	10,431

\* Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration, and disputes involving less than six employees, are included in the published record only when ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes."

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Six disputes, involving approximately 340 workers, were carried over from January, and eleven disputes commenced during February. Of the seventeen disputes in progress during the month, ten were recorded as terminated, six being in favour of the employers concerned, one being partially successful, one resulting in a compromise, and the results of two being recorded as indefinite. At the end of

February, therefore, there were seven disputes recorded as strikes or lockouts in progress, namely: coal miners, Robb, Alta.; two disputes of coal miners at Blairmore, Alta.; coal miners, Bienfait, Sask.; women's clothing factory workers, Toronto, Ont.; compositors, Saskatoon, Sask., and lumber workers, Campbell River, B.C.

The record does not include minor disputes such as are defined in a previous paragraph, nor does it include disputes as to which information had been received indicating that employment conditions are no longer affected, but which the unions concerned have not yet declared terminated. Information is available as to seven such disputes, namely: motion picture projectionists, Ottawa, Ont., February 23, 1931, one employer; photo engravers, Toronto, Ont., March 23, 1931, one employer; photo engravers, Toronto and London, Ont., Quebec and Montreal, P.Q., and Winnipeg, Man., May 4, 1931, one employer; motion picture projectionists, Montreal, P.Q., August 27, 1931, one employer; sawmill workers, Barnet, B.C., September 23, 1931, one employer; cooks and waiters, Edmonton, Alta., September 29, 1931, one employer; and lumber workers, Campbell River, B.C., December 3, 1931, one employer, this last being added this month.

A minor strike is recorded as having occurred on February 19, 1932, when two truck drivers employed by a bakery in Vancouver, B.C., went on strike when the employer refused to accede to certain demands they had put forward. They were replaced within a day or so, and no further dispute has been reported.

Information was received in the Department, too late for inclusion in the February issue of the LABOUR GAZETTE, as to a strike of coal miners at Bienfait, Sask., which occurred on January 28, 1932. It is reported that between sixty and seventy workers, members of the Mine Workers' Union of Canada, demanded that all the miners in the colliery should belong to their union, and on the refusal of several men to join, went out on strike, returning to work after eight hours when the miners complained of agreed to their demand. It was then arranged with the employer that the miners who had lost time through the dispute would work one hour longer each day for eight days in order that the lost time might be made up.

During February a strike in another mine at Bienfait, Sask., was reported in the press, it being stated that some twenty miners were involved in a one-day dispute owing to a dis-

## STRIKES AND LOCKOUTS IN CANADA DURING FEBRUARY, 1932

Industry, occupation and locality	Number of workers involved	Time loss in working days	Remarks
<b>(a) Strikes and Lockouts in Progress Prior to February, 1932</b>			
LOGGING— Lumber workers, Campbell River, B.C.	36	36	Commenced Dec. 3, 1931; for increase in wages ; employment conditions no longer affected by end of February; indefinite.
Lumber workers, Nipigon dis- trict, Ont.	100	800	Commenced Dec. 23, 1931; for dismissal of certain workers and for increase in wages; terminated Feb. 9, 1932; in favour of employer.
MINING, NON-FERROUS SMELTING AND QUARRYING— Coal miners, Robb, Alta.....	75	1,500	Commenced Dec. 12, 1931; against discharge of worker and charging for lamps, alleged to be in violation of agreement; unterminated.
MANUFACTURING— <i>Textiles, Clothing, etc.</i> — Women's clothing factory workers, Toronto, Ont.	10	200	Commenced Jan. 25, 1931; against reduction in piece-rates; unterminated.
<i>Printing and Publishing</i> — Compositors (news and job), Saskatoon, Sask.	21	475	Alleged lockout; commenced Dec. 14, 1931; against decrease in wages; unterminated.
CONSTRUCTION— <i>Building and Structures</i> — Bricklayers and carpenters, Vancouver, B.C.	100	200	Commenced Jan. 18, 1932; against reduction in wages; terminated February 3, 1932; partially successful.
<b>(b) Strikes and Lockouts Commencing during February, 1932</b>			
LOGGING— Lumber workers, Campbell River, B.C.	66	1,200	Commenced Feb. 6, 1932; for increase in wages and reduction in board; unterminated.
MINING, NON-FERROUS SMELTING AND QUARRYING— Coal miners, Coleman, Alta.....	250	1,000	Commenced Feb. 2, 1932; for equalization of work throughout mine; terminated Feb. 8, 1932; in favour of employer.
Coal miners, Coleman, Alta.....	300	800	Commenced Feb. 3, 1932; sympathy with miners on strike Feb. 2, 1932; terminated Feb. 8, 1932; in favour of employer.
Coal miners, Canmore, Alta.....	254	1,524	Commenced Feb. 15, 1932; for change in working conditions; terminated Feb. 22, 1932; in favour of employer.
Coal miners, Blairmore, Alta....	300	1,800	Commenced Feb. 23, 1932; against dismissal of worker; unterminated.
Coal miners, Bellevue, near Blairmore, Alta.....	330	1,675	Commenced Feb. 24, 1932; sympathy with miners who struck Feb. 23, 1932; unterminated.
Coal miners, Bienfait, Sask.....	50	350	Commenced Feb. 22, 1932; against removal of check weighman; unterminated.
Coal miners, Bienfait, Sask.....	150	300	Commenced Feb. 24, 1932; against arrest of certain workers involved in strike commencing Feb. 22, 1932; terminated Feb. 26, 1932; indefinite.
MANUFACTURING— <i>Textiles, Clothing, etc.</i> — Women's clothing factory workers, Montreal, P.Q.	1,500	2,500	Commenced Feb. 19, 1932; against reduction in wages; terminated Feb. 22, 1932; compromise.
Weavers, Renfrew, Ont.....	19	19	Commenced Feb. 19, 1932; for increase in wages ; terminated Feb. 20, 1932; in favour of employer.
Textile factory workers, Ren- frew, Ont.	50	300	Alleged lockout; Feb. 22, 1932; <i>re</i> increase in wages for weavers; terminated Feb. 29, 1932; in favour of employer.

agreement as to the payment of union dues. No details, however, have as yet been received in the Department.

A number of disputes have been reported during the month involving men on unemployment relief work, in all cases receiving subsistence for which some work was performed or might be required. As no relation of employer and employee was involved these are not included in the record. No disputes involving unemployment workers, employed at stated wages, have been reported.

The following paragraphs give particulars regarding certain disputes in addition to the information given in the tabular statement:

**LUMBER WORKERS, CAMPBELL RIVER, B.C.**—The employing company involved in this strike, which commenced on December 3, 1931, the workers asking for an increase in wages, is reported to have closed the camp, and as employment conditions are no longer affected, the dispute has been transferred to the list of such strikes and lockouts, carried elsewhere in this article, which the unions concerned have not yet declared terminated.

**LUMBER WORKERS, NIPIGON DISTRICT, ONT.**—This dispute, commencing December 28, 1931, and arising from a demand by the workers for the dismissal of certain workers and for an increase in wages, was called off by the union on February 9, 1932, the strikers having been replaced by other workers.

**COAL MINERS, ROBB, ALTA.**—At the end of February only fifty of the seventy-five workers originally involved in this dispute, which commenced on December 12, 1931 (in protest against the discharge of a worker and charging miners for lamps, alleged to be in violation of the agreement), were reported to be still on strike, twenty-five of the miners having returned to work or having secured work elsewhere.

**WOMEN'S CLOTHING FACTORY WORKERS, TORONTO, ONT.**—This dispute, commencing January 25, 1932, the workers protesting against a reduction in piece-rates, was untermiated at the end of February, but the employer reported that a number of the strikers had returned to work and that the remainder had been replaced.

**COMPOSITORS, SASKATOON, SASK.**—At the end of February, seventeen out of the forty-four workers involved in this dispute, which began on December 14, 1931, the workers protesting against a decrease in wages, were reported to be still involved. As stated in the February issue of the *LABOUR GAZETTE*, several of the compositors had returned to work with the permission of the union under open shop con-

ditions during January, and in February several more also returned under those conditions. At the end of the month the union declared the dispute to be untermiated.

**BRICKLAYERS AND CARPENTERS, VANCOUVER, B.C.**—As stated in the February issue of the *LABOUR GAZETTE*, this dispute, commencing on January 18, 1932, in protest against reductions in wages, terminated early in February following negotiations between the parties, with the assistance of the Deputy Minister of Labour for British Columbia and the resident officer of the federal Department of Labour, work being resumed on February 3. The contractors agreed to maintain the rate for carpenters at \$1 per hour until March 31, 1932; and signed an agreement with the bricklayers (summarized elsewhere in this issue) providing for a reduction from \$1.35 per hour to \$1.22½, to be in force from February 1, 1932, to March 31, 1933.

**LUMBER WORKERS, CAMPBELL RIVER, B.C.**—On February 6, 1932, lumber workers, fallers and buckers, employed by one company operating near Campbell River, B.C., went on strike to enforce their demand for an increase in wages and a reduction in the rates for board, etc. It is reported that the men asked for an increase in piece rates from 40 cents to 50 cents per thousand feet, or to \$4.50 per day straight wages, and also a reduction from \$1.40 to \$1.20 per day for board and blankets. The company refused the demands and the next day sixty-six of the employees went on strike, some refusing to take part. The officials of the company appealed to the provincial police for protection of those not on strike and of those secured to replace the strikers, and the sixty-six men involved in the dispute were forced to leave the camp. At the end of the month the dispute was reported to be still in progress.

**COAL MINERS, COLEMAN, ALTA.**—Employees in one colliery ceased work on February 2 to enforce their demand for equal division of work. Late in January the same colliery had been involved in a one-day dispute for an equal division of the available work among the men, there not being orders for coal to employ all steadily. The management had agreed to an arrangement more satisfactory to the men and work was resumed. The miners, however, claimed that after their return the work was not divided equally, and on February 2 they again ceased work. The management stated that with the surplus of employees and the small tonnage contracted for it was impossible to divide the work as demanded by the men. On February 3, miners employed by another colliery in the district went on

strike in sympathy with those involved in the above dispute. On February 5 a settlement was prevented when the miners involved in the sympathetic strike demanded that certain men who had continued working in their colliery during the strike be suspended. The management refused this demand and the miners involved in both disputes returned to work on February 8, under the same conditions as prior to the walk-out.

**COAL MINERS, CANMORE, ALTA.**—This dispute began on February 15, 1932, when miners in three collieries operated by one company demanded that, for workers paid by the yard, measuring should be done on working days instead of on "off-days" as they claimed was the practice of the management. The management, however, claimed that nearly all of the measuring had been done on working days and that the miners were fully protected by the right of the check-measurer, appointed by the men, to be present. It was also stated that as the measuring had to be done promptly in order to make up the pay-roll it was impossible to guarantee that it would be done on a working day, and the men returned to work on February 22 with no change in conditions.

**COAL MINERS, BLAIRMORE, ALTA.**—This dispute began on February 23, 1932, when 300 miners employed in one colliery ceased work to enforce their demand for the reinstatement of one of their number who had been discharged for using insulting language to one of the mine officials. The management had, prior to the walk-out, offered to reinstate the miner in question if he would apologize, but this was refused. In another colliery, at Bellevue, operated by the same company, a sympathetic strike occurred next day. At the end of the month no settlement had been reported.

**COAL MINERS, BIENFAIT, SASK.**—On February 22, 1932, coal miners employed by one coal mining company operating in the Bienfait district near Estevan were called on strike by the union, the Mine Workers' Union of Canada, when the operator of the mine removed a check-weighman who had been appointed by the men. The discharged worker was not an employee of the company, and the owner maintained that while the men were entitled to appoint a check weighman, it was necessary to choose an employee of the company. The men maintained that the appointment should be open to anyone they might choose, and when the owner refused to accept the appointed miner they ceased work. The leaders of the strikers, according to press reports, were then arrested on complaint of the owner, for, it is stated, an alleged

violation of the Industrial Disputes Investigation Act. On February 25 miners employed in some of the neighbouring collieries responded to the call of the union for a walk-out in protest against the arrest of these men. The Deputy Minister of Labour of the province of Saskatchewan conducted a thorough investigation of the dispute. The men under arrest were allowed out on bail until Saturday, February 27, when they were to appear for trial; whereupon the miners involved in the sympathetic dispute returned to work, February 26, leaving on strike some fifty miners, employees of the company first involved, who refused to return to work until after the trial. At the end of the month no settlement to the dispute had been reported, but it was stated in the press that the owner of the mine had been arrested on complaint of the union that he had violated the Mines Act in causing the removal of a check-weighman appointed by the miners from among their numbers. He was also released on bail, to appear February 27 for trial.

**WOMEN'S CLOTHING FACTORY WORKERS, MONTREAL, P.Q.**—This dispute commenced on February 19, 1932, when approximately 1,500 workers employed by some twenty-five women's clothing factories operating in Montreal went on strike against a wage cut of ten per cent and to retain the closed shop. The agreement between the International Ladies' Garment Workers' Union and the manufacturers of women's clothing, suits, etc., had expired at the beginning of the year. On February 20 it was agreed that the workers would accept the lower rate of wages on condition the closed shop be retained (employment of union members only). Work was resumed on February 22, a new agreement to the above effect to be signed.

**WEAVERS AND TEXTILE FACTORY WORKERS, RENFREW, ONT.**—This dispute commenced on February 19, 1932, when nineteen weavers employed by a woollen manufacturing company went on strike to enforce their demand for an adjustment in piece-rates. Work was resumed from February 20 to February 22 pending a settlement, but from the latter date to the 29th the whole establishment, with fifty employees, was reported to be closed. On February 29 work was resumed at the previous rates of pay, the weavers claiming a concession in conditions was made.

The Quebec Legislature, at its recent session, approved of the imposition, after March 1, of a tax of 5 per cent on every meal purchased in a restaurant in the province for which the bill is in excess of 35 cents, the tax to be paid by the customer.

## STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the *LABOUR GAZETTE* from month to month, bringing down to date that given in the issue for February, 1932, in the review of Strikes and Lockouts in Canada and other countries, 1931. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1919 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, and for such countries the latest figures are not for relatively recent dates.

### Great Britain

The number of disputes beginning in January was 30, and 9 were still in progress from the previous month, making a total of 39 disputes in progress during the month, involving 18,300 workpeople with a time loss of 217,000 working days.

Of the 30 disputes beginning in the month, 10 were over proposed reductions in wages, 4 on other wage questions, 4 on questions as to working hours, 7 on questions respecting the employment of particular classes or persons and 5 on other questions. Settlements were reached in 18 disputes, of which 5 were in favour of workpeople, 7 in favour of employers and 6 ended in compromises; in two other disputes, work was resumed pending negotiations.

No report has been received of any settlement of the strike of 4,000 lightermen, watermen, tugmen and bargemen of the Port of London, which began January 4 against reductions in wages.

A strike involving 3,000 textile operatives in the heavy woollen industry at Dewsbury and Batley began January 22, and subsequent dates against proposed reductions in wages. No report of a settlement has been received.

A strike of hosiery workers in Leicester and district began December 7 and other dates in December; in all 2,400 workers were involved. The dispute was over the introduction of a system of work measurement and terminated February 11, when certain working conditions modifying the system were agreed upon by both parties.

In the cotton manufacturing industry at Burnley in Lancashire, a strike involving between four and five thousand weavers began

February 8 against alleged breaches of agreement by the adoption of the more-ooms-to-a-weaver system.

### United States

The number of disputes beginning in December was 42, and 44 were in effect at the end of the month. The number of workers involved in disputes in effect at the end of the month was 4,935 and the time loss during the month was 189,704 working days.

When they failed to reach a new agreement with employers after the expiration of their agreement at the end of 1931, about 25,000 dressmakers in New York City went on strike on February 16. On March 4, a two-year agreement was signed with only minor changes from the previous one.

The House of Commons, on February 22, by 72 votes to 49, negatived a motion by Mr. J. S. Woodsworth (Winnipeg North Centre) for leave to introduce a bill to amend section 98 of the Criminal Code, which concerns seditious and unlawful assemblies. Section 98 was added to the Criminal Code in 1919. Since that time the Trades and Labour Congress of Canada and other labour bodies have regularly protested against the retention of the section as being, in their opinion, calculated to restrict the legitimate activities of organized labour. Mr. Woodsworth explained that the bill which he proposed to introduce was the same as the bill which passed the House of Commons in the Sessions of 1926, 1926-7, 1928, 1929, and 1930, but had failed on each occasion to pass the Senate.

On February 16 the Quebec Legislature discussed a proposal submitted by Dr. Anatole Plante (Mercier-Montreal), to make health units compulsory in every county in the Province. The Hon. L. A. Taschereau, on behalf of the Government, expressed appreciation of the work of the existing health units, but he considered that more harm than good would be done by a compulsory measure at a time of such acute depression as the present. He promised, however, that if conditions should be better next year, the next speech from the Throne would contain a provision in regard to compulsory health units. (An account of Health Units in the Province of Quebec, by Dr. Alphonse Lessard, Director of the Quebec Provincial Bureau of Health, was given in the *LABOUR GAZETTE*, December, 1931, page 1309.)

## ANNUAL REPORT OF THE DEPARTMENT OF LABOUR OF CANADA FOR FISCAL YEAR ENDING MARCH 31, 1931

THE annual report of the Department of Labour recently presented to Parliament, describes the various activities of the Department during the fiscal period from April 1, 1930, to March 31, 1931. The following Acts and ordinances were administered under the authority of the Minister of Labour:—(1) Labour Department Act; (2) Conciliation and Labour Act; (3) Industrial Disputes Investigation Act; (4) Government Annuities Act; (5) Employment Offices Co-ordination Act; (6) Technical Education Act; (7) Combines Investigation Act; (8) Old Age Pensions Act; (9) White Phosphorus Matches Act; (10) Fair Wages Policy of the Government of Canada, based on a Resolution of the House of Commons, 1900; (11) since May 30, 1930, The Fair Wages and Eight Hour Day Act, 1930, chapter 20; and (12) since September 22, 1930, The Unemployment Relief Act, 1930, chapter 1.

### Unemployment

The action taken by the Government in view of the unfavourable industrial situation and the resulting unemployment, is described in the report of the Deputy Minister. This report gives details of the attempt that was made in the fall of 1930 to ascertain the extent of the prevailing unemployment. "No comprehensive statistics," it is stated, "were available, and with a view to ascertaining the facts as to the prevailing unemployment, and also as to the conditions likely to develop with the advent of winter, the Minister of Labour caused a survey to be made through the provinces and municipalities. Telegraphic messages were addressed on August 12 to premiers of the respective Provincial Governments and to the mayors of all municipalities of 10,000 population and upwards, soliciting their co-operation in supplying an estimate of the number of persons presently unemployed in their respective jurisdictions, and also an estimate of the number likely to be out-of work during the coming winter. While the response to this request was very prompt and general, the estimates submitted by the Provincial Governments were not sufficiently concrete in many cases to make a Dominion-wide tabulation on this basis. Also a few of the mayors encountered difficulties in securing satisfactory estimates. However, sixty-nine of the seventy-seven mayors communicated with submitted figures showing that on or about August 15 there were 117,930 unemployed in these sixty-nine cities, with an estimated probable unemployment during the

coming winter in the same centres of 176,755. This estimate did not of course include the eight larger municipalities not submitting concrete figures, nor the smaller municipalities and rural centres. Based on the mayor's survey, however, it was estimated that the existing unemployment in Canada directly affected from 150,000 to 200,000 persons normally employed. In addition, there were a great many persons working only part time in various industries, particularly coal mining and textiles, who were averaging not more than three days per week and some much less.

"The next move of the Minister of Labour was to summon a meeting of the Employment Service Council of Canada to consider the replies received from the Provincial Governments and mayors and to make such recommendations as it deemed wise pertaining to the unemployment conditions in Canada. This Council was instituted by the Dominion Government, in 1918 for advisory purposes in relation to the operation of the Employment Service, and generally on ways of preventing unemployment, and is representative of the Dominion Government and the Provincial Government, returned soldiers, organized labour, and a number of the larger employing interests, including agriculture, manufacturing, lumbering, building and construction, and transportation. Through the public press the Minister of Labour extended an invitation to representatives of other bodies to attend as observers and these representatives were also accorded a voice in the deliberations.

"The Council met in Ottawa on August 21 and, after two days spent in devising ways and means of dealing with the unemployment situation, adopted a series of recommendations embodying its views on emergency steps which might be taken to provide immediate relief of unemployment, including relief works comprising the building and construction of highways, bridges, wharves, railway terminals, subways, railway crossings, public buildings and other public improvements, as well as repairs to and maintenance of public highways and properties. It advised the co-operation of the Dominion and Provincial Governments and municipal authorities in meeting the cost of relief works, and indicated the division which should be made of the relief costs. It recommended that Parliament provide adequate credit to take care of all contingencies that might arise in connection with the relief of unemployment; that an immediate survey of imports should be made,

followed by such legislative changes as would safeguard Canadian industry, and the workmen engaged therein; and that the scope of the census questionnaire in 1931 should be extended to cover the unemployed in Canada. The Government was also advised to continue its policy of restricting immigration into Canada, and to give all possible encouragement to the marketing of Canadian grain, farm produce and other primary products. These resolutions were a few days later endorsed by the annual convention of the Trades and Labour Congress of Canada.

"The Dominion Government accepted the resolutions of the Employment Service Council as the basis of its legislative policy, and Parliament was summoned in special session on September 8 to consider 'the necessity for dealing with exceptional economic conditions with the resultant unemployment,' at which three Government measures, designed to ameliorate these prevailing conditions, were introduced and became law. An Act, cited as *The Unemployment Relief Act, 1930*, appropriated twenty million dollars to be expended for the relief of unemployment. The stimulation of employment in the major Canadian industries was the object of the two other statutes which provided (1) for a number of changes in the Customs Act, and (2) for a revision of the Canadian Customs Tariff, the new tariff schedules effecting increases in a specified list of commodities.

"The policy adopted by the Government in August, 1930, of imposing strict limitations on immigration and of discontinuing the solicitation of immigration resulted in a reduction of 46 per cent in the number of immigrants entering Canada as compared with the preceding period, the total immigration for 1929-30 being 163,288, and for 1930-31, 88,223.

"Arrangements were also made for the inclusion of questions relating to employment and unemployment in the schedules for the approaching general census of the Dominion, and consideration was given by the Dominion Bureau of Statistics and the Department of Labour to the form in which the questions would appear, so that the replies secured by the enumerators would depict conditions as actually existing on the date of the census."

The report describes the work carried on under the provisions of the Unemployment Relief Act, 1930 (LABOUR GAZETTE, September, 1930, page 1050, and subsequent issues).

### Industrial Disputes Investigation Act

This chapter constitutes the twenty-fourth annual report of the Registrar of Boards of Conciliation and Investigation covering proceedings under the Industrial Disputes Investi-

gation Act for the fiscal year ending March 31, 1931.

Twenty-three applications for the establishment of Boards of Conciliation and Investigation were received during the fiscal year; twenty-nine disputes figure, however, in the record, proceedings having been continued over from the preceding fiscal period in six cases. Over 22,500 employees were directly concerned in these disputes, which were distributed amongst different industries as follows: coal mining, two; steam railways, ten; street and electric railways, six; shipping, four; light and power, one; and disputes not falling clearly within the direct scope of the statute, six. Ten boards were established, one of which dealt with four applications; reports were received from each of these boards, as well as from three boards established during the preceding fiscal year, one of the latter dealing with two disputes. No interruption of work occurred following the award of a Board of Conciliation and Investigation, amicable settlements having resulted in the two instances in which a strike had taken place prior to reference of the differences under the terms of the statute, and the threatened strike being averted in each of the other cases.

All reports and minority reports made by boards or members of boards established under the provisions of the Industrial Disputes Investigation Act were, as required by the statute, published in the LABOUR GAZETTE.

In addition to its application to industrial disputes in mines and public utility industries coming directly within the jurisdiction of the federal authorities, the Industrial Disputes Investigation Act is operative in respect to similar disputes falling within the provincial sphere in British Columbia, Alberta, Saskatchewan, Manitoba, New Brunswick, and Nova Scotia, the Legislatures of each of these provinces having passed an Act declaring such disputes subject to the Dominion statute. Three boards established during the year came within this category. In Ontario, Quebec, and Prince Edward Island enabling legislation had not been enacted at the close of the fiscal year 1930-31.\*

Boards were not granted in the case of eleven applications before the department, one of which was received at the close of the preceding fiscal period. Two of these applications were later withdrawn and three were held in abeyance at the request of the applicants, one application was defective, while

\*Legislation giving effect to the Act was enacted by the Quebec Legislature at its session in 1932, and a similar measure is now before the Ontario Legislature.

the circumstances of three disputes did not appear to justify board procedure. In two cases falling outside the direct scope of the statute consent to the establishment of a board was withheld by the employer.

### Conciliation Work

The report gives details of the conciliation work of the Department during the period covered. In some cases strikes or lockouts had already occurred, and in others cessation of work appeared to be imminent, or there was difficulty in carrying on negotiations in connection with wages and working conditions. In most cases the proceedings were under the provisions of the Conciliation and Labour Act, which empowers the minister to inquire into the causes and circumstances of a dispute, to take such steps as seem expedient for the purpose of bringing the parties together, and to appoint a conciliator or an arbitrator when requested by the parties concerned. In some disputes occurring in industries coming directly under the Industrial Disputes Investigation Act, namely, mines and public utilities, preliminary inquiries by officers of the department resulted in the settlement of the matters in dispute without the necessity of the establishment of Boards of Conciliation and Investigation under the Act.

"In recent years," it is stated, "there has been a marked tendency on the part of employees to bring their grievances to the attention of the department before resorting to strike measures. Where such opportunities have been afforded, departmental officers have been highly successful in bringing about an amicable adjustment of the difficulty. Experience in such matters has very clearly demonstrated that it is much easier to negotiate successfully in a friendly atmosphere and more satisfactory results are obtained under such circumstances. Settlement of disputes under these conditions means that there is no loss of wages to the employees concerned and no stoppage of work or inconvenience to the industry. It is therefore hoped that the tendency in this direction may be even more marked in succeeding years."

The Department of Labour has on its staff conciliators and mediators who are stationed at Vancouver, Winnipeg, Toronto, Ottawa, Montreal and Halifax. The territory of the officer resident in Vancouver comprises the three western provinces. The Winnipeg officer's territory is the province of Manitoba. The conciliation officer resident in Toronto confines his activities to Ontario, while the officer in Montreal covers the province of Quebec. The territory of the officer residing

in Halifax includes the three Maritime provinces. The headquarters of the Chief Conciliation Officer are at Ottawa. These officers are also charged with certain duties arising out of the administration of the Fair Wages Policy applying to contracts let by the Dominion Government and to works aided by federal funds as referred to in chapter II of this report.

Details of the conciliation work of the department during the period covered by the report were given in the *LABOUR GAZETTE*, April, 1931, page 402.

### Fair Wages Policy

The Fair Wages Policy of the Government of Canada was originally based on a resolution adopted by the House of Commons in March, 1900, and was given the force of an Order in Council in 1922.

The Fair Wages and Eight Hour Day Act enacted by the Dominion Parliament on May 30, 1930, gives statutory effect in certain respects to the Fair Wages Policy. This Act applies both to contracts for the construction, remodelling, repair or demolition of any work for the Government of Canada, and to works carried out by day labour, and provides for the payment of "such wages as are generally accepted as current from time to time for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged; provided that wages shall in all cases be such as are fair and reasonable"; also that "the working hours of persons while so employed, shall not exceed eight hours per day except in such special cases as the Governor in Council may otherwise provide, or except in cases of emergency, as may be approved by the Minister."

Fair wages conditions were prepared or sanctioned by the Department of Labour during the fiscal year in connection with 451 contracts for Dominion public works executed by various departments of the Government, and in the case of eight contracts awarded by certain Harbour Commissions for works aided by Dominion public funds. Wage rates and hours of labour for inclusion in contracts awarded by the Post Office Department for supplies totalling \$360,092.34 were also submitted to the Department of Labour for approval or otherwise.

As already stated, the observance of the provisions of the Fair Wages and Eight Hour Day Act, 1930, and the Dominion Fair Wages Policy was made a condition of all agreements involving expenditures for public works or undertakings under the Unemployment Relief Act, 1930.

The report contains tables showing the government contracts for which Fair Wages Conditions were provided during the fiscal year (monthly lists of such contracts are given in each issue of the LABOUR GAZETTE).

### Employment Service

The fiscal year ended March 31, 1931, was the thirteenth in which the Employment Service Branch, set up under the Employment Offices Co-ordination Act, co-operated with the provincial Governments to maintain the Employment Service of Canada. During the year the number of centres at which offices are conducted increased to 68 by the opening up of new offices at Montreal North, P.Q., and Stratford, Ont. The report contains full statistics of the work carried on at these offices during the year.

Representatives of the Federal Office are placed in certain local offices for the purpose of engaging in specialized employment work on behalf of handicapped war veterans, in pursuance of the agreements between the federal and provincial governments. Until the fiscal year 1923-24 the Department of Pensions and National Health (formerly the Department of Soldiers' Civil Re-establishment) endeavoured to place in suitable employment men having physical handicaps due to war service. During that year the Department of Labour took over from that department this work in respect of all provinces except Quebec, and incorporated it into the Employment Service of Canada. It is stated that, judged by the number of applications made at the employment offices by handicapped ex-service men, though it is now twelve and a half years since the Armistice, the obligation of endeavouring to assist these men in securing work shows no considerable diminution, but seems to remain at about the same level.

For some years the Employment Service has provided a regular channel of information for the Department of Immigration and Colonization relative to the availability of Labour in Canada as a condition affecting the admission of workers from outside of Canada. Since the passing of Order in Council P.C. 1413 in August, 1929, under which workers entering Canada under contract of employment must secure special authority from the Minister of Immigration, the Employment Service Branch of the Department of Labour has been consulted by the Immigration Department on numerous occasions in this connection.

### Old Age Pensions

The five provinces of Canada from Ontario to the Pacific coast and the Northwest Territories participated during 1930-31 in the

benefits of the Old Age Pensions Act, the total sum paid out in pensions amounting to \$11,560,292.83, and the total number of pensioners on March 31, 1931, being 57,930. The Dominion Government's share of expenditure during the year was \$5,780,927.77.

Quarterly reports of proceedings under this Act are published regularly in the LABOUR GAZETTE.

### Combines Investigation Act

The report summarizes the proceedings under the Combines Investigation Act, this section constituting the eighth Annual Report of the Combines branch of the Department. Details are given of the judgment of the Privy Council declaring the Act to be constitutional, and also of the various proceedings arising out of the cases that were dealt with during the year, including the cases of the Amalgamated Builders' Council, the Electrical Estimators' Association, the motion picture industry, and the bread baking industry.

### Canadian Government Annuities

The sale of Government annuities showed a marked improvement over the preceding year, the amount of money received for the purchase of annuities, \$3,612,233.88, representing an increase of 15 per cent, while the number of contracts issued, 1,772, was the highest on record and exceeded the previous year by 40.9 per cent. Annuity contracts in force on March 31, 1931, numbered 11,781 and purchase money received by the Annuities Branch from its inception in 1908 up to that date totalled \$28,472,321.83.

### Technical Education

The Technical Education Act, which became law in 1919 provided for the distribution of ten million dollars to the provinces over a period of 10 years. Eight of the provinces were unable to earn their entire appropriations during the 10-year period, and in order to give these provinces a further opportunity to earn the balance of their allotments under the provisions of the statute, the Act was extended at the 1929 session of Parliament for a term of five years. Provinces eligible to receive grants during the fiscal period 1930-31, for the purpose of promoting and assisting technical education, were Saskatchewan, Manitoba, New Brunswick, Nova Scotia, and Prince Edward Island. The amounts earned by the provinces participating in the grants for the year ending March 31, 1931, were as follows: Saskatchewan, \$198,289.95; Manitoba, \$38,621.44; New Brunswick, \$50,025.71; Nova Scotia, \$73,669.61; and Prince

Edward Island, \$30,790.34. The report contains full information as to the work carried on in each province during 1930-31.

### Statistics

Statistical and other information relating to labour conditions has been collected and published by the Department of Labour since its establishment in 1900 as required by statute (LABOUR DEPARTMENT Act, chapter 111, Revised Statutes, 1927, section 4). In accordance with the Statistics Act (1918) chapter 190, Revised Statutes, 1927, and under arrangements with the Dominion Statistician, statistics are collected and published in co-operation with the Dominion Statistician, in close association with statistics of general social and economic conditions as organized in the Dominion Bureau of Statistics.

The statistics prepared by the Department include Strikes and Lockouts; Wages and Hours of Labour; Prices and Cost of Living; and Fatal Industrial Accidents. This information is published regularly in the LABOUR GAZETTE. Summaries for the period 1930-31 are given in the present report.

### Publications

The LABOUR GAZETTE, the official monthly journal of the department, was issued regularly each month and completed its thirtieth year of publication. The average monthly circulation was 10,988 copies of the English edition, and 1,671 of the French.

As in the past, annual volumes were published on Labour Organization in Canada; Organization in Industry, Commerce and the Professions in Canada; Co-operative Associations in Canada; and Labour Legislation in Canada. Chapters in the report discuss the leading features of these reports, which were widely distributed and are believed to have performed an important function in informing the public accurately on the subject matters involved.

### International Labour Organization

The Department of Labour is entrusted with important duties arising out of the relations of Canada with the International Labour Organization. These entailed much correspondence, not only with the International Labour Office, but also with other departments of the Dominion Government, with the provinces, and with employers' and workers' organizations. Replies also were prepared in the Department of Labour to various questionnaires which were circulated on behalf of the International Labour Office. The per-

formance of these duties necessarily entailed a close study on the part of officers of the department of the various technical questions figuring on the different conference agenda and meetings of the Governing body, and of questionnaires received from the International Labour Office.

### Library of the Department

The Library of the Department was organized in 1900 when the department was created, and has steadily increased its collection of documents since that time. Through the exchange of publications with departments of other Governments carrying on work along similar lines the department is kept in touch with labour matters in almost all countries of the world. In addition to the official publications thus received, there is a valuable collection of publications of labour organizations and periodicals and newspapers published in the interest of organized labour. A complete collection of volumes dealing with labour problems and legislation is supplemented by books for reference and volumes on general economic subjects, history and law. Subject to requirements of the departmental officers, the services of the library are at the disposal of the general public, and frequent use is made of its material by students from the Canadian universities and by others interested in labour problems. Books are sent by mail, wherever possible, to any persons wishing to borrow them, and special information and bibliographies are compiled when required.

Chief Justice Morrison, in the British Columbia Supreme Court on February 10, continued an injunction that had been granted in January, restraining the Workmen's Compensation Board from enforcing the payment of assessments levied against certain logging companies, which the companies claimed were excessive. The injunction restrains the Board from taking its usual legal steps through the sheriff's office to collect from some 60 logging firms the unpaid amounts of two extra levies made in the latter part of 1931. These two levies raised the amount of the assessment to 9.7 per cent of the 1931 payroll, the loggers' affidavits stated. Ten years ago the assessment was only 2.5 per cent. Two years ago it had risen to 5.2 per cent. This remarkable increase, it is explained, is due to the dwindling of the number of logging firms in operation, and the provision of the Act requiring that the assessments for each year shall meet the accident claims for the same period.

## IMMIGRATION AND COLONIZATION IN CANADA IN 1930-1931

THE annual report of the Department of Immigration and Colonization for the fiscal year ended March 31, 1931, gives details of the various activities of the Department during that period. The principal statistics for 1930-31 were given in the *LABOUR GAZETTE*, May, 1931, page 621. Reference is made in the report to the changing conditions which led to the curtailment of the immigration movement by the Order in Council P.C. 1957, dated August 17, 1930 (*LABOUR GAZETTE*, October, 1930, page 1144), which imposed certain restrictions on admission of immigrants. This order effected a decline in the total number of immigrants from 163,288 in the period 1929-30, to 88,223 in 1930-31. During the same time the number of Canadian-born citizens, British subjects with Canadian domicile, and naturalized Canadians, who returned to Canada from other countries during 1930-31, was 30,209. The largest group (32,507, including dependants) of immigrants in 1930-31 belonged to the farming class; followed by female domestic servants (10,836); mechanics (7,871); labouring class (5,298); and trading class (5,890).

### Colonization

The report states that "during the fiscal year 1930-31, the unemployment problem common to all countries made manifest that the primary duty of the department, in so far as colonization is concerned, lay in the colonization and settlement of people now in Canada. A definite policy of colonization of our own people, was, therefore, instituted. The Minister communicated with all provincial governments and the presidents of the Canadian Pacific and Canadian National Railways outlining a policy of restricted immigration until such time as the Canadian unemployed had become absorbed into productive industry, and invited all provincial Governments, the railways and other interests concerned to devote their energies to the work of assimilation of our unemployed into gainful occupation. The provincial Governments and the railways expressed unqualified approval of the policy.

"The department, through its Land Settlement Branch, has been actively engaged in settlement and farm placement work. During the year, 1,446 families were settled on farms and 5,266 single men placed in farm employment; 2,704 of these latter placements were made during the period October 1-March 31. The provincial Governments and the Colonization Departments of the railways have done

similarly effective colonization and placement work. This effort is being continued and plans have been completed for a co-ordinated effort on the part of the Department, the provincial Governments and the Colonization Departments of the railways.

### British Immigration

Generally speaking, British immigration may be divided into two classes, *viz.*—(1) Those who receive assisted passage, and (2) Those who pay their own fare.

The Assisted Passage Agreement of December 28, 1929, was effective during the calendar year 1930 and applicable to the following classes of migrants: (a) Selected families proceeding under an approved Land Settlement Scheme; (b) Selected families for farm placement; (c) House-workers, and (d) Juveniles.

The Assisted Passage Agreement of 1930, which was amended January 30, 1931, is applicable to the following classes only: (a) Selected families proceeding under an approved Land Settlement Scheme; (b) Members of a family nominated by the head of the family who is already settled on the land in Canada, and (c) Juveniles. All other British migrants normally resident in Great Britain and Northern Ireland proceeding to Canada for the purpose of residing permanently in the Dominion pay the £10 ocean rate, plus rail fare to destination. The number of persons who received assistance under the Empire Settlement agreement during the period covered by the report was 3,350.

### Juvenile Immigration

The following statement shows the number of British boys who were selected under the various immigration schemes:—

Provincial Government Schemes—	
Nova Scotia . . . . .	59
New Brunswick . . . . .	18
Ontario . . . . .	146
Manitoba . . . . .	45
Saskatchewan . . . . .	63
British Columbia . . . . .	16
	<hr/>
	347
British Immigration and Colonization Association . . . . .	
Juvenile Emigration Societies . . . . .	672
Direct and Descriptive Nominations . . . . .	1,113
	2,785

The migration of children and juveniles from the British Isles to Canada is encouraged and promoted by the Government of Great Britain and the Canadian Government with joint government assistance, under the terms and provisions of the Empire Settlement

Act of Great Britain which came into operation in 1922. The Act still retains its original terms, but from year to year agreements have been entered into by the two Governments in respect to details of its operation.

Assistance has been given to boys and girls who come to Canada with the definite purpose of engaging in agricultural and household work respectively. The cost of their transportation which amounts to approximately \$80 per capita is assumed by the two Governments. The agreement provides only for boys of the full age of 14 years and under 19 years of age on the date of sailing and for girls of 14 to 17 years of age.

During the period 1930-31, 2,190 children were admitted to Canada under the various schemes.

### Women's Branch

This branch was formed in 1919 on the recommendation of many national organizations in Canada which were at that time represented on the Canadian Council of Immigration of Women. The work undertaken by the branch includes the following: (1) To give information overseas to women intending to migrate to Canada, to assist in the selection of those required in this country, and to prevent the movement of types not likely to succeed; (2) To give supervision on the journey, also assistance and guidance at ports of entry in Canada; (3) To give oversight and care to unaccompanied women while travelling on trains in Canada from the port of entry to destination; (4) To assist in placement and in general follow-up or aftercare work in Canada.

Care on arrival at destination is given to house-workers at the Canadian Women's Hostels. These were organized after the war in order that houseworkers coming to Canada seeking domestic employment should have a safe place to go and be under friendly supervision while seeking employment. The hostels are non-denominational and are operated under local management, the Board usually comprising representatives of the various Women's organizations in each centre. Grants are given to these hostels by the Dominion Government and in most cases by the Provincial Government of the province in which the hostel is situated. The Dominion Government also pays for from twenty-four to forty-eight hours' accommodation to houseworkers on their arrival and while awaiting placement. During the period of the report 10,944 new arrivals were registered at the Canadian women's hostels at Halifax, Montreal, Toronto, Winnipeg, Regina and Calgary.

The Empire Settlement Act came into force in 1922 and the records show that to the end of the fiscal year, 23,799 girls have come out under the scheme. Of this number, 18,790 arrived since January, 1926, and are under the supervision of the Women's Branch and receiving aftercare according to the terms of the agreement. This scheme practically ceased as far as the movement of domestics is concerned, at the end of December, 1930. Out of 18,790 girls arrived since 1926, 11,083 have settled in the province of Ontario. In this province there are four women investigating officers who were nurses overseas. There are also three women investigating officers for other districts. Women officers at the ports give aftercare to the Empire Settlement cases in their districts. Though the department is not bringing out any domestics under the Empire Settlement Scheme the aftercare cannot cease for some time and fresh problems continue to come to our attention and will for several years.

### New Brunswick Family Settlement Scheme

Ninety-six selected agricultural families from Great Britain came forward in the spring of 1930 for farm settlement under the New Brunswick Family Settlement Scheme. Two hundred and ninety-four families were settled under this project during the period covered by the report. The settlement and field supervision is done by the Land Settlement Branch of the department. Under this scheme 93 families sailed between April 1, 1930, and December 31, 1930, and 1 family between January 1, 1931, and March 31, 1931.

*The United States Field.*—The United States Offices, in 1930-31, confined their attention to the selection of agriculturists with sufficient capital to enable them to acquire land, livestock and equipment and to maintain themselves until their farms become self-supporting. No encouragement was given any prospective settler likely to become a factor in the general labour market. The United States offices were maintained primarily for the purpose of encouraging agricultural immigration to Canada. In view of unemployment conditions and the necessity of assimilation of people already in Canada it was decided towards the end of the year that the retention of United States Agencies was not warranted.

### Chinese Immigration

During the fiscal year 1930-31, no Chinese immigrants were admitted to Canada. It will be recalled that under the Chinese Immigration Act, 1923, which is still in force, the entry of persons of Chinese origin or descent is confined to members of the following

classes:—(a) members of the diplomatic corps, or other government representatives, their suites and their servants, and consuls and consular agents; (b) children born in Canada of parents of Chinese race or descent, who have left Canada for educational or other purposes, on substantiating their identity to the satisfaction of the controller at the port or place

where they seek to enter on their return; (c) (1) Merchants, as defined by such regulations as the minister may prescribe; (2) Students coming to Canada for the purpose of attending, and while in actual attendance, at any Canadian university or college authorized by statute or charter to confer degrees.

## LABOUR LEGISLATION IN QUEBEC IN 1932

**T**HE Quebec Legislature, which was in session from November 3, 1931, to February 19, 1932, enacted a number of laws of interest to labour, dealing respectively with unemployment relief, the investigation of industrial disputes, employment offices, labour organizations, minimum wages for women, and workmen's dwellings.

*Unemployed Aid.*—The Unemployed Aid Act, 1931, ratifies and confirms an agreement of October 17, 1931, set forth in Schedule A to the Act, between the Federal authorities and the Minister of Public Works and Labour of the province of Quebec, pursuant to the Unemployment and Farm Relief Act, 1931, passed by the Parliament of Canada. The Lieutenant-Governor in Council may authorize the Provincial Treasurer to pay the costs called for by the agreement out of the Consolidated Revenue Fund and to raise money therefor by way of loans. Municipal corporations are authorized to benefit by the Unemployment and Farm Relief Act, to do all things necessary for the purpose by resolutions of their councils, to contribute out of their funds, and to make by-laws for loans without other formality than approval of such by-laws by a majority of a quorum of the council and by the Lieutenant-Governor in Council. Contracts made by municipal corporations for the execution of works must provide that the workmen employed shall have fair wages and reasonable hours as mentioned in the agreement, which specifies an eight-hour day, except where a modification is agreed to by the Minister of Labour, and fair and reasonable rates of wages not exceeding the rates required to be paid by the Federal Government for the class of work in the district. The agreement further provides that materials used shall be as far as possible of Canadian manufacture, that persons employed shall be residents of Canada and, wherever practicable, of the locality in which the work is being performed. The foregoing provisions apply to the Provincial Government and to municipal corporations in respect of additional sums placed at their disposal for the purpose of

assisting the unemployed. Orders in Council adopted for the carrying out of the Unemployed Aid Act, 1930, since July 1, 1931, are ratified and confirmed as are those adopted before the coming into force of the Unemployed Aid Act, 1931, to carry out the provisions of the agreement of October 17, 1931.

The Unemployed Aid Act, 1930, was amended to extend the time for the repayment of loans contracted by municipalities for the purposes of the Act from twenty years to thirty years.

An "Act respecting the Salaries and Wages of Workmen and Labourers employed at Work undertaken to relieve Unemployment" provides that salaries and wages of workmen and labourers employed at work undertaken to relieve unemployment with the aid granted by the Federal and Provincial Governments under the Unemployment Relief Act, 1930, and the Unemployment and Farm Relief Act, 1931, passed by the Parliament of Canada, and under the Unemployed Aid Act, 1930, the Certain Works Unemployed Aid Act, 1930, and the Unemployed Aid Act, 1931, passed by the Legislature of the province, shall not be seizable with respect to any claim for debts contracted by such workmen and labourers notwithstanding the provisions of paragraph 11 of article 599 of the Code of Civil Procedure.

*Industrial Disputes.*—The Industrial Disputes Investigation Act, 1932, makes the provisions of the Dominion Industrial Disputes Investigation Act which are in force on February 19, 1932, applicable to every industrial dispute of the nature therein defined which is subject to the exclusive legislative jurisdiction of the province. The Lieutenant-Governor in Council may, by proclamation, apply the provisions of any amendment which may be made to the Dominion Act to disputes within the exclusive legislative jurisdiction of the province.

*Employment Offices.*—An amendment to the Employment Bureau Act, which comes into force on May 1, 1932, repeals those sections which permitted private employment

offices to operate under licence and prohibits the keeping of such offices except those established and maintained by religious congregations or societies for the placing of their protégés; workers' societies for the study, defence and development of the economical, social and moral interest of employees; charitable and benevolent societies; and employers who have their own employment bureaux. In all cases a permit must be obtained from the Minister of Labour. Such permit is issued free of charge and is good for one year only. It may be cancelled at any time. No remuneration may be exacted from the seeker for employment and a register must be kept in the form prescribed by the Minister. A further amendment provides that any person working under a contract of lease and hire of work or of apprenticeship may register free at the Government employment bureaux established under the Act. Penalties are provided for contravention of the Act.

*Trade Unions.*—The Professional Syndicates Act was amended to permit payments, from the special indemnity funds of a syndicate, of benefits to members on the decease of their consorts.

*Women's Minimum Wages.*—The Women's Minimum Wage Act was amended to extend its scope to include commercial establishments. The section dealing with the appointment of the Minimum Wage Commission was altered to provide that two members should represent the female employees. The section dealing with Conferences was redrawn and a provision inserted that where employers or employees refuse or neglect to name representatives these may be named by the Minimum Wage Commission. Provision is made that the Commission may revise its decisions of its own motion. It may also fix a special scale of wages for persons engaged in seasonal occupations.

*Housing.*—Sections added to the Workmen's Dwelling Act declare valid every clause contained in a deed of transfer of land or property passed on or after March 17, 1919, in favour of a municipality to guarantee its advances, stipulating that, on failure of the borrower to meet the agreed instalments of principal or interest on the due date or within a fixed delay, he shall be deprived of his rights and the municipality shall become the indisputable owner of the immovable property so transferred. In order to obtain a perfect title, it is sufficient for the municipality which made such a stipulation in a deed to register a declaration that the borrower has failed in his obligations and is accordingly deprived of his rights, or to obtain judgment to that

effect. Municipalities which have acquired immovables since March 17, 1919, by following the above formalities are confirmed in their ownership. If a municipality obtains a title by the registration of a declaration the borrower or his representatives may, within six months after such registration, bring suit to have the title annulled, if it has been obtained illegally.

*Colonization.*—An Act to Promote the Return to the Land provides that the Lieutenant-Governor in Council may authorize the Minister of Colonization, Game and Fisheries, or some person named by the latter, to acquire immovable property possessed by municipalities or sold for municipal taxes, at a price not exceeding \$100 in each case or \$5 per arpent. The Lieutenant-Governor in Council may, on recommendation of the Minister of Colonization, Game and Fisheries, authorize the Department to dispose of vacant lots suitable for farming and to place settlers thereon on trial without a location ticket on terms fixed by the Order in Council. The Lieutenant-Governor in Council is empowered, on the joint recommendation of the Minister of Colonization, Game and Fisheries and the Minister of Lands and Forests, to effect agreements and enter into contracts with the Federal or Municipal authorities, timber-limit holders and others for the purpose of promoting the interests of colonization and the return to the land.

*Co-operation.*—An Act respecting the People's Savings Banks called Desjardins, organized under the Quebec Co-operative Syndicates Act, provides that the sum of twenty thousand dollars shall be set aside yearly for the efficient propaganda and supervision of such banks. The Provincial secretary is authorized to sign a contract with the "Fédération de Québec des unions régionales des caisses populaires dites Desjardins" for a period not exceeding ten years, fixing the conditions of the yearly payments, or payment for any portion of a year, of such grant to the federation.

An amendment to the Co-operative Syndicates Act sets forth the various classes of securities in which syndicates may invest their funds and provides that at least one-half of their reserve funds shall be invested in securities of this class. Provision is made that the Provincial Treasurer, at the request of a federation, board of management, or two-thirds of the members or shareholders where they number less than twenty-five, may audit the operations of the syndicate named in the request if such syndicate is one for credit or other purposes commonly known as a "people's savings bank."

## MOTHERS' ALLOWANCES IN NOVA SCOTIA, 1930-31

THE second annual report of the director administering the Mothers' Allowances Act of Nova Scotia reviews the activities under this Act during the year ending September 30, 1931. In dealing with the year's work the director discusses the factor of unemployment as related to mothers' allowances as follows:

"Unemployment has undoubtedly been the main cause of increasing the number of applications for allowances, and in some cases creates one of the most difficult problems the Advisory Commission has to solve. A widow with a family consisting of several dependent children under sixteen years of age and a number of older children from seventeen to, perhaps, twenty-five years of age, makes application for an allowance. It is clear that the earning power of the family is sufficient to maintain it under normal conditions, but the widow pleads there is nothing for the older children to do and, consequently, the younger children are in need. It is clear that should an allowance be approved, the whole family would benefit, and the Mothers' Allowances Act, therefore, would become, in such cases, unemployment relief. The Advisory Commission and the Director consider that the Mothers' Allowances Act was not intended to provide for such conditions.

"If, however, the records in an application show several dependent children under sixteen years of age and one, two, or more children ranging in ages from seventeen to twenty-one years, whose earning capacity has never been equal to the reasonable requirements of the family or where one or more of the older children is physically or mentally incapacitated, an allowance may be approved. However, there are cases where it is very difficult to determine the actual earning ability of the family in relation to a reasonable standard of living, and such cases take much time for consideration."

The director also comments on the great improvement in the attendance of children at school, and points out that all children for whom allowances are paid are required to attend school except under very exceptional circumstances.

A summary of the statistics for the year indicates that the number of applications for allowances totalled 1,827, of which 1,030 were approved. The total amount of monthly allowances paid during the year was \$310,602.24, while the average monthly amount per family was \$29.95. In thirty-two cases the maximum monthly allowance of \$60 was paid. The number of the dependent children of the 1,030 beneficiaries totalled 3,179, or an average of 3.08 dependent children per family. The total number of children over 16 years of age in the families benefited was 1,916, while there were 409 benefited families without any children over 16 years of age.

The number of mothers with one child was 131; with two children, 334; with three children, 236; with four children, 140; with five children, 84; with six children, 62; with seven children, 27; with eight children, 14; with nine children, 1; and with ten children, 1.

The total reported monthly earnings of children over 16 years amounted to \$20,480.91, and their total reported monthly contributions to their families was \$6,732.50. There were 110 cancellations of allowances during the year and 5 renewals.

The report of the Chief Visitor emphasized the value of the assistance given under the provisions of the Act in re-establishing homes which had been broken up prior to its enactment. There were 41 such homes re-established, and 18 homes prevented from being broken up, while there were 12 homes to which children returned after living away from home.

## Workmen's Compensation in Quebec

The *Quebec Official Gazette*, February 20, 1932, contained an Order in Council approving Regulation No. 3, of the Quebec Workmen's Compensation Commission (Regulation No. 4, was given in the LABOUR GAZETTE, February, 1932, page 173).

### REGULATION No. 3

Any employer who refuses or neglects to pay the amount of an ordinary, special, supplement-

ary or provincial assessment, or any instalment or part of such assessments, within a delay of one month from the date specified in the notice of such assessments, or within a shorter delay specified in such notice of assessment, shall be liable to a fine of 5 per cent of the amount due and to an additional fine of 1 per cent of such amount for each month or fraction of subsequent month during which such default continues.

## Workmen's Compensation in Saskatchewan

The *Saskatchewan Gazette*, March 1, 1932, published additional regulations under the Workmen's Compensation Act. (Previous regulations were noted in the *LABOUR GAZETTE*, December, 1931, page 1308, and in previous issues).

Regulation 49 (relating to the distribution of farm machinery and implements) adopted by the Board on October 30, is amended by adding the following paragraphs:—

"Distributors of such merchandise who do not furnish the primary source within the

Province from which such merchandise may be obtained, and who whether on consignment or purchase and resale or otherwise deal in such merchandise as retailers thereof, are deemed to carry on an industry not within the Act and such industry is wholly excluded as to all operations."

(Regulation 49 was given in the *LABOUR GAZETTE*, December, 1931, page 1308).

Regulation 50 transfers the industries of dredging, pile-driving and stevedoring to another group in class 20, as set out in Regulation 32.

## RAILWAYMEN'S PROPOSALS SUBMITTED TO ROYAL COMMISSION ON RAILWAYS AND TRANSPORTATION

THE appointment by the Government of Canada of a Royal Commission to investigate the transportation problems of the Dominion was noted in the *LABOUR GAZETTE*, December, 1931, page 1280. In the course of the investigation numerous witnesses have appeared before the Commission from every section of Canada, and among these the representatives of organized labour, including the labour employed in the running trades and railway shops, submitted their views at a session of the Commission at Ottawa on February 15, the workers' representations being presented by Mr. Robert J. Tallon, president of Division No. 4, Railway Employees' Department, American Federation of Labor.

The submission on behalf of railway labour included a statement of the extent of the workers' interest in the transportation system. It stated that "the number of workers necessary to the Canadian railway industry is approximately 200,000. These together with their dependants total at least 1,000,000, which is a little less than 10 per cent of the population of Canada." The pay earned by these employees in 1930 amounted to \$251,540,000.

"Of the 200,000 railway employees of Canada it appears that at least 70,000 or 35 per cent are to-day wholly without employment, while the remainder, with the exception of railway officials (who constitute less than 2 per cent) are working short time."

The memorandum referred in Part II to the valuable asset possessed by the railways in the good-will and co-operation of their workers. These favourable industrial relations were shown in the existing arrangements for collective bargaining and for the settlement of disputes under the Industrial Disputes Investigation Act; and in the labour-management

co-operation plan in the railway shops, which enlarged the usefulness of the labour unions to the railway industry.

Part III of the memorandum dealt with the prevailing transportation problems as viewed by railway labour, including those resulting from competition among the railways themselves, and also between the railways and newer forms of transportation. Difficulties ascribable to the auxiliary services provided by the railways are also dealt with, including hotels, steamship services, express and telegraph services. Other difficulties that are discussed are those connected with finance and with the relation of the railways to the Federal Government. Finally the problems of unemployment and irregularity of employment are dealt with.

### Recommendations

The recommendations and conclusions proposed by the railwaymen were as follows:—

1. That healthy competition between the railways of Canada, fairly evenly divided as to mileage, be encouraged, subject to control by a permanent transportation tribunal empowered to prevent wasteful rivalries.

2. That the Canadian National Railway system continue under government control, and that its relation to the Government be modified so as to reduce the hazard of political interference in management to the lowest terms possible.

3. That the Board of Railway Commissioners for Canada be reconstituted into the National Transportation Board of Canada, and empowered, upon its own initiative or upon complaint to investigate wasteful rivalries in transportation service, whether by railway,

highway or waterway, hold hearings and if in the public interest, issue orders eliminating the wastefulness of such services.

4. That such authority as is now vested in Parliament to investigate, hold hearings and approve new railway construction, the raising of new capital and the issuance of securities for these and similar purposes, be delegated for final approval, without parliamentary hearings, to the proposed National Transportation Board, the Board at the same time being empowered to investigate, hold hearings, and grant final approval in respect to provision of new railway facilities, duplication of existing services and the like.

5. That the National Transportation Board be composed of individuals most eminently suited by virtue of training, experience, intelligence, insight, achievement and impartiality of judgment to function as the supreme authorities of Canada on the various problems arising in the transportation industry.

6. That such services now being operated by the two large railway systems of Canada as hotels and summer resorts, express and telegraph departments and coastwise steamships, be operated by separate corporations jointly controlled by both railways, as is now being done with respect to the Northern Alberta Railway, and that their earnings be pooled and shared fairly.

7. That any employee or officer engaged in any of the services consolidated as a result of the foregoing recommendations shall not, by virtue of such consolidation, be displaced or reduced in rank or in compensation for a period of at least seven years, and that in the meantime every effort shall be made to find regular assignments of duty for employees affected by consolidation of such services.

8. That transportation for hire by highway and waterway be declared by Parliament to be for the general advantage of Canada, and that the regulation of such transportation be placed in the hands of the proposed National Transportation Board.

9. That the proposed National Transportation Board proceed forthwith to make a careful study of the entire highway and waterway transportation situation, just as the Interstate Commerce Commission has done in the United States, with a view to establishing a suitable licensing system for common carriers by highway or waterway, codes for safe operation of motor vehicles for hire as well as for safety of personnel, liability insurance, hours of service, standard system of accounts, supervision of rates, etc., all to the end that such transportation may be effectively controlled.

10. That the proposed National Express Company, jointly controlled by both railways,

be enabled, on behalf of the railways, to establish a motor vehicle service properly co-ordinated with the railways, and that this railway express motor vehicle service be recognized by the National Transportation Board as entitled to priority in the future licensing of motor vehicle transportation services for hire.

11. That a special study be undertaken, under the auspices of the proposed National Transportation Board, of the matter of taxation of motor vehicles operating on the public highways, in order to determine, for the benefit of the various taxing agencies of Canada, i.e., municipalities, counties, provinces, and the Dominion, the amount of taxes which should be charged the operators of such motor vehicles, especially trucks and buses, so that they will contribute to the construction and maintenance of city streets and highways sums commensurate with their use of these facilities.

12. That tolls be charged for the use of the publicly maintained and operated canals of Canada, and that the proposed National Transportation Board, after proper hearings and investigation, prepare a schedule of such tolls.

13. That the hazard of political interference to which the Canadian National Railway system is now exposed be reduced by

- (a) Reconstituting its board of directors so that its members will hold office for a period of six years; that regular appointments coming due each year will not exceed three in number; that directors be appointed as representative of definitely specified major economic interests, such as finance, manufactures, agriculture, mercantile and labour; that the appointments be made from a list of three nominations for each vacancy by the recognized national voluntary association or associations representative of the interest concerned; and that the appointments be made by the Governor in Council with the advice and consent of Parliament.
- (b) Vesting sole power in the reconstituted board of directors to appoint the president and vice-presidents of the Canadian National Railway, the president and one of the vice-presidents (who is to be designated by management) to become *ex-officio* members of the board.
- (c) Delegating final approval as to new construction, provision of new services or facilities, raising new capital and issuance or reissuance of all securities, to the proposed National Transportation Board.
- (d) Subjecting all activities of a competitive nature as between the private

and the publicly owned railway systems to the scrutiny of the proposed National Transportation Board, as already suggested.

- (e) Confining the power of inquiry into and report upon any matter affecting either government or privately owned railways strictly to the proposed National Transportation Board, and relieving the Minister of Railways and Canals of this power as now granted by Section 34 of the Canadian National Railway Act.

14. That a Transportation Advisory Council for Canada be established having the following individuals, definitely identified with the transportation industry, as members:

Minister of Railways and Canals—Chairman.  
President of the Canadian National Railway.

President of the Canadian Pacific Railway.  
President of the proposed National Express Company.

Chairman of the proposed National Transportation Board.

One representative of the employees of the Canadian National Railways selected by their standard unions.

One representative of the employees of the Canadian Pacific Railway selected by their standard unions.

One representative of the employees of the services auxiliary to the railways, such as express, telegraphs, etc., selected by their standard unions.

15. That the purpose of this council be to give continuing consideration and study to important problems confronting the Canadian transportation industry, to supervise research in these problems, to co-operate with other agencies in such studies and researches, to submit reports and findings, and in other ways be generally helpful to the transportation industry of Canada.

16. That the funds required for financing the undertakings of the Transportation Advisory Council be contributed by the Government, the railways and their auxiliary services.

17. That the financial structure of the Canadian National be revised so as to eliminate all liabilities which, in the light of the nine facts set forth in Section 4 of Part III, have little if any justification in this structure as judged by sound railway financial practice.

18. That intensive study be started immediately of the entire problem of unemployment and irregularity of employment in all its phases in the transportation industry, this study preferably to proceed under the auspices of the proposed Transportation Advisory

Council, providing this Council is organized without delay, and that steps be taken systematically and progressively to stabilize employment and protect the livelihood of the employees of the Canadian transportation industry and its auxiliary services against possible unemployment due to consolidations and pooling of services, equipment and facilities, technological changes, improvements and other methods aimed at effecting financial economies.

19. That the relations between labour and the managements of the various companies and auxiliary services of the Canadian transportation industry be placed on a co-operative basis in keeping with the six principles of labour-management co-operation set forth in Section 2 of Part II, entitled Canadian Railway Labour Relations.

One phase of work for the unemployed that has been carried on by the Social Service Council of Canada "has consisted of quiet but effective co-operation with newspapers and periodicals, which has been the means of bringing together a considerable number of farm jobs and farm labourers. The success of this work has been largely due to the energy and discretion of Rev. Father McGrath."—(*Social Welfare*, February, 1932.)

The *Alberta Gazette*, February 15, 1932, contains new regulations, pursuant to Section 3 of the Theatre Act of Alberta, covering the licensing of projectionists and apprentice projectionists, and the care and operation of motion picture equipment. The regulations provide for an annual license fee of \$10 for projectionists (\$5 for apprentices), the licences being in three classes according to competency. Particulars are given in regard to applications; the examinations for each class; the duty of projectionists to make returns to the Chief Inspector at the close of every performance in a theatre; and as regards certain offences which would lead to the cancellation of a licence.

During the month of January a total of 3,601 accidents was reported to the Ontario Workmen's Compensation Board, as compared with 4,236 for the same month last year. The fatal cases numbered 19, as against 21 last January. The total benefits awarded amounted to \$453,530.64, of which \$363,621.34 was for compensation and \$89,909.30 for medical aid. During January last year the total benefits awarded amounted to \$580,403.11.

## RECENT LABOUR UNION ACTIVITIES

### Manitoba Provincial Executive of Trades and Labour Congress

On February 12, 1932, representatives of the Manitoba Provincial Executive of the Trades and Labour Congress of Canada, Winnipeg Trades and Labour Council and the Joint Legislative Committee of the Railway Train Service organizations waited on Premier John Bracken and members of his cabinet and presented the following legislative program.

That the provisions of the Minimum Wage Act applicable to boys eighteen years and under be extended to all industries, with stricter application of the board's orders for both sexes;

Compulsory public liability insurance for all automobile owners;

Amendments to the Child Welfare Act;

The adoption by Manitoba of legislation similar to the Alberta Labour Disputes Act, with certain amendments;

Appointment of the necessary examining board under "An Act Respecting Barbers";

Legislation to provide pensions for the blind;

Amendments to the Workmen's Compensation, Steam Boiler, Fair Wage, Debt Adjustment and Garnishment Acts;

Appointment of a deputy minister of labour and giving labour an opportunity to submit names of suitable men;

That the regulations, restrictions and tariffs of trucks and buses be placed under central uniform control;

Free text books for all children up to and including grade 12.

Under the heading of unemployment, the delegation strongly urged the government to give consideration to the following recommendations: (a) Six-hour day without the equivalent reduction in wages for Provincial Government employees; (b) An 8-hour day, 40-hour week for all industries within the province; (c) Reducing the pension age from 70 to 65; (d) Enactment of unemployment insurance legislation; (e) Continuation studies for unemployed young people who have finished their public school course; (f) Raising the school age for children from 14 to 16 years; (g) Establishing a board to investigate and determine cause of unemployment and to make recommendations.

### Federation of Catholic Workers of Canada, Inc.

The following requests, presented on February 18 by representatives of the Federation of Catholic Workers of Canada, Incorporated,

were submitted to Hon. W. A. Gordon, Minister of Labour, and Hon. Arthur Sauvé, Postmaster General, on behalf of the Federal Government:

The adoption of an eight-hour day throughout Canada.

That the tariff on commercial printing be raised.

A system of social insurance.

Representation of the Federation on the Canadian delegation to the International Labour Conference at Geneva.

Revision of the Federal and Provincial Companies' Acts.

The delegation expressed regret that members of the National Catholic Unions are not employed at the Government Printing Bureau, and claimed that, as there is no closed contract with the International Typographical Union, there was no reason why their members should not be employed.

The federal government's attitude towards Communism was approved.

### New Brunswick Federation of Labour

On February 4 the executive board of the New Brunswick Federation of Labour, consisting of E. S. Steeves (president), J. A. Whitebone, J. B. Johnston and J. H. Wallace (vice-presidents), and George R. Melvin (secretary-treasurer) waited on the Executive Council of the Provincial Government, and presented a program of legislative requests, as prepared and approved at the recent convention of the Federation. (A report of this convention appeared in the *LABOUR GAZETTE*, February, page 184). The proposals included such subjects as: Public ownership of public utilities; Motor bus and truck transportation legislation; Labour representation on public boards; Electric power plants and distribution systems legislation; Unemployment; Proposed amendments to the following Acts:—Motor Vehicle, Workmen's Compensation, Electrical Energy, Elections, Vocational Education, Factories (Boiler inspection), Old Age Pensions, Mother's Allowance, Minimum Wage and Children's Protection.

Other requests were as follows:—That the erection of billboards at curves and intersections of highways be prohibited; That a plumbing inspector be appointed for each medical health district; Amendments to the Factories Act; That jurymen be paid for all time lost and expenses incurred while serving on juries; Appointment of a deputy minister of labour for the Province; An Eight Hour Day and Fair Wages Act similar to the Fed-

eral Act of 1930; The enactment of legislation making it compulsory for all vehicles using the provincial highways at night to show a light at left side, and that headlights of motor cars be dimmed when meeting traffic.

### **Locomotive and Train Service Employees in the Maritime Provinces**

The joint legislative committee of the locomotive and train service employees during the month of February submitted to the governments of the three Maritime Provinces memoranda containing the following legislative proposals:—

That suitable protection be provided at all railway crossings, and where possible, complete separation of highways from railways by subways or overhead bridges;

Stricter regulation of buses and trucks with regard to tariffs, safety appliances, qualifications of drivers and their hours of duty, etc.;

Government control of Canadian radio broadcasting.

A request for uniform traffic regulations in all provinces of the Dominion, and for a higher standard of qualifications for operators of motor vehicles, was submitted to the government of Nova Scotia and Prince Edward Island.

Other requests presented to the different governments were as follows:—

*New Brunswick:* Advance polls at all elections; Uniform educational system for the three Maritime Provinces; Labour representation on all public boards and commissions; Establishment of unemployment insurance; Government control and development of natural resources, including water-power; Co-operative action to discover cause of recurring unemployment, and measures for its alleviation.

*Nova Scotia:* Changes in Workmen's Compensation to provide increase in the computation basis to \$2,000, and increase in the percentage of compensation to 66½ per cent of wages; To make effective the Old Age Pension Act; Enforcement of the Steam Boiler Act, 1914, by the appointment of qualified inspectors.

*Prince Edward Island:* Amendment to Assessment Act for the exemption from taxation of incomes of \$2,000 and under.

### **United Mine Workers of America**

A partial account of the 32nd convention of the United Mine Workers of America, held at Indianapolis in January, was given in the last issue (page 188). A further summary of the proceedings at the convention is given below:—

The committee dealing with old age pensions concurred in the principle expressed in all the resolutions on this subject presented to the convention, and stated that The United Mine Workers of America was the first organization to favour the adoption of old age pension legislation in the United States, having had an international committee functioning in the furtherance of such legislation. The committee expressed the opinion that all international unions, including the American Federation of Labor, should concentrate their efforts at Washington and in every State, in support of the proposed bill to appropriate federal moneys to the various States which have adopted old age pension legislation, on the basis of dollar for dollar with the amounts appropriated by the State. The report of the committee was adopted.

Resolutions were adopted as follows:—

Favouring the LaFollette-Costigan bills for direct relief and relief work.

Offering a tribute of appreciation and affection for Justice Oliver Wendell Holmes, who recently resigned from the United States Supreme Court; Supporting legislation prohibiting the use of injunctions in labour disputes;

Favouring a bill introduced in Congress for the immediate relief and stability of the coal mining industry;

Requesting Congress to guarantee prices ten per cent above the cost of production of farmers' products;

Pledging support to the mine workers of Kentucky, West Virginia and Tennessee in their efforts to secure wage agreements;

Favouring a guarantee of bank deposits;

Instructing the international officers and executive board to make a thorough study of the question of unemployment insurance and work out some plan for presentation to State legislatures and Congress that will permanently and adequately provide relief to those willing to work, but unable to secure employment;

Recommending the building up of a defence fund within the American Federation of Labor for the purpose of supporting affiliated organizations;

Requesting the withholding of government contracts from firms and corporations which cut wages of their employees;

Favouring a political movement through the American Federation of Labor;

Demanding the repeal of all laws concerning syndicalism, and the release of all workers in prison charged with violation of these laws;

Favouring the soldiers' bonus bill;

Recommending that mechanical devices, while operating, be taxed in proportion to the

number of workers displaced, and to an amount sufficient to care for such workers and their families;

Recommending that eighteen be the minimum age at which children can be employed;

Asking for a clear wave channel for radio station WCFL of Chicago;

Favouring the election of all Federal Judges;

Demanding the release from prison of Thomas J. Mooney and Warren K. Billings;

Pledging support to miners on trial in Kentucky;

Condemning the use of oil and gas in factories and plants, and asking miners to withhold support from such firms;

Favouring amendment to the Volstead Act to permit of the manufacture and distribution of good beer.

The following were the only two changes made in the constitution; (1) That not more than six hours from bank to bank in each twenty-four hours and not more than five days per week shall be worked by members of the organization; (2) Equitable statutory old age pensions, workmen's compensation and unemployment insurance laws.

Among the recommendations of the scale committee, subsequently adopted by the convention, were the following:

That the various districts be permitted to negotiate the best wage agreement possible;

Reaffirming the action of former conventions in approving of such subject matters as the five-day week and six-hour day, mechanized mining in its various forms, restoration of the competitive field or joint inter-state wage agreements, and minimum wage for the employees in coal mines;

Recommending an adjustment in wage rates between classes of labour in and around coal mines;

Uniformity of wages in all agreements, and that all contracts expire at the same time;

That in the negotiating of wage agreements there be no discrimination on account of age of employee or other unfair and unjust requirements of employment;

Favouring the calling of a joint conference of coal operators and representatives of the United Mine Workers of America for the purpose of working out a program of stabilization on a national or readjusted competitive field basis.

## CANADIAN CONSTRUCTION ASSOCIATION

### Proceedings at the Fourteenth Annual Convention

THE Canadian Construction Association held their 14th annual Convention at Vancouver, January 27 to 29, the delegates including representatives from all parts of Canada.

Hon. R. W. Bruhn, Minister of Public Works for British Columbia, in welcoming the convention to the Province, suggested that they should face the problems of the future with confidence in the capacity of the Canadian people to overcome the depression. He hoped the convention would consider the unemployment problem, and pass a resolution on that subject.

Alderman John Bennett, acting mayor of Vancouver, stated that the present efforts to settle unemployment were unsatisfactory, and asked the convention to strengthen the hands of the government in bringing forward a well-considered unemployment insurance plan of a contributory nature. The present situation could not last for ever, and he considered that there were already signs of improvement, but he pointed out that the past two years should teach the lesson to all that it was necessary in boom years to make provision for lean years.

Dr. H. M. Tory, president of the National Research Council, dealt with the contribution

of science and research to industry, particularly emphasizing how closely research work is allied with construction.

Mr. H. P. Frid, President of the Association, reviewed the activities of the association during its fourteen years of existence. He stated that during the past year attention had been chiefly concentrated on obtaining a solution of the unemployment problem. He paid a high tribute to the work of J. Clark Reilly, general manager of the association, and also thanked the executive, past presidents and advisory board for their support during his two years of office.

Mr. J. Clark Reilly, in his annual report, described the success which had met the introduction of the standard contract forms, and stated that an equipment rental form was now being worked out. Collective advertising, using the daily press, radio, trade papers, and other mediums had been given serious consideration by the association during the past year, but it had been decided not to go ahead with the plans at present. Unemployment had received much attention from the organization during the year, the report stated, and as a proof of the vital effect of unemployment on the construction industry Mr. Reilly re-

ferred to the decrease in construction which had taken place as the result of the depression. He asserted that pick and shovel relief work ignored skilled workmen, and that to correct this situation a special employment plan had been drawn up, approved by the executive and presented to the Rt. Hon. R. B. Bennett, Premier of Canada.

### Unemployment

Under this heading the report stated as follows:—"It is natural that during the past year a great deal of our attention should have been focussed upon this problem, with particular reference to the way in which it has affected our industry. How very vitally we are concerned with it is evident by the most casual review of the figures showing the decrease in the construction totals month by month. We have been concerned with the unemployment of the general contractor, the sub-contractor, the manufacturer and the supply-man, as well as the workman, both skilled and unskilled. The popular interest, however, seems to be confined to the last named, and relief measures have been planned with him in view. As a result the majority of works planned and undertaken to relieve unemployment, where construction was involved, proved to be of the pick and shovel variety. This evidently was the line of least resistance. We felt that it was only a partial answer, taking little or no consideration of the skilled workmen in our industry who work on the buildings and in the factories where materials are manufactured.

"Perhaps the highlight of the year's work was the presentation of our case to the Prime Minister, the Rt. Hon. R. B. Bennett. Our delegation consisted of some nineteen members of our executive and advisory committees, and included general contractors, trade contractors, and manufacturing and supply members. Our case was very ably presented by M. M. Pigott, for the contractors (general), George Oakley, M.P.P., for the contractors (trade), and J. B. Carswell, for the manufacturing and supply section. Some results were soon evident, but the financial conditions have prevented as much as we had reasonably expected.

"This question of unemployment is one in which we are most vitally interested, and should give us concern, not merely to relieve suffering and distress, or to provide temporary employment as a measure of relief to men out of work. The future of our industry is very closely wrapped up with the working out of some system or plan by which our workmen can be assured of a reasonable amount of work each year. All-year construction

methods, the staggering of government work for times when private industry is dull, more efficient financing of public and private enterprises, all enter into the picture. I do not think there is as yet any panacea which will answer the problem fully, but I believe that it is of the utmost importance that construction men should be fully seized of the importance of the question and be really trying to find the answer."

### Mechanic's Liens

"In several of our provinces," the report continued, "there is an evident movement towards revision and change of laws relating to liens on buildings. These laws, apparently originally provided to protect the wages of workmen employed, have been expanded until their most frequent use to-day is apparently to protect persons who have supplied material or equipment. Loose credits to poor risks have aggravated conditions. It has been felt in several quarters that the time is ripe for an adjustment of the existing laws regarding liens. In Manitoba, British Columbia and Ontario dissatisfaction has been expressed at some of the present inequalities. Quebec, with a much more recent revision, feels that the law in that province is satisfactory.

### Wage Adjustments

"One of the questions (the report continued) which has given not only our committee, but the men in the industry generally, much concern in the past year has been that of wage adjustments. At our last convention, we felt that at that time it was inadvisable to recommend that there should be any effort made in the direction of having wages in our industry adjusted to the general trend of prices, cost of living and wages in other occupations. Later, the situation changed, and we felt that circumstances were such that wage adjustments were not only advisable, but were being forced upon us by economic conditions. In many centres there have been conferences with representatives of the building trades unions representatives, and as a result, changes in rates per hour have been arrived at to meet the present conditions.

"It has been suggested that the whole subject of wages might be discussed at some form of conference, to be arranged between representatives of the unions interested and the employers of our industry. Whether this would take the form of a conference, or whether a national conference board could again be established, should be carefully considered at this meeting of our men."

### Wage Agreements

"This leads up to the question of wage agreements and what they involve. Up to the present they have dealt with rates per hour, overtime and working conditions. They have been submitted to us by the union's representatives on their own particular form, and we have then sat down to endeavour to study them out and get some clauses included. It should be time now for us to go into the question of considering the possibility of working out some standard forms of agreement with labour, along the lines of our standard contract forms. We are so vitally interested in the agreements that we make, and so much is involved that affects the general public, that we should work out forms which have the benefit of our experience and at the same time be in line with the best legal advice."

### Disputes

"Labour relations have been fairly satisfactory in our industry across Canada throughout the past year. Strikes have been few and far between, and there seems to have been a desire on the part of the leaders in the building trades unions to get amicable settlement of questions which have come under discussion."

### Some Resolutions Adopted

**Unemployment.**—The convention unanimously adopted the following resolution on the subject of unemployment, being the matter of outstanding concern to the people of this country: This convention urges the government of Canada to convene the representative conference on unemployment repeatedly urged for the last year, and directs our incoming executive to continue co-operative effort with the government in order to obtain the earliest and best results.

**Day Labour.**—This resolution declared opposition to the practice of doing construction work on the day labour basis by civic, provincial and federal governments, on the grounds that this practice is not economical and does not secure adequate returns from labour, or make use of existing construction equipment or the facilities provided by the organization of construction firms.

**Rotation of Labour.**—"That we are not prepared to recommend any change in the hours of work per day or per week in our industry, but we do suggest that it may be advisable to use some form of rotation of labour, in order to assist in the present unemployment situation. We suggest that our

members should send forward to the executive, through the manager, any data they may have in their possession which will be of help in considering this question."

**Licensing of Contractors.**—"That a special committee should be appointed by the incoming executive committee to give further consideration to the protection of the construction industry in Canada from the irresponsible contractor. This committee should then correlate information it may obtain from the Associated General Contractors of America as to steps taken by them, and other sources, and arrange the same for use either by the executive committee or through the various provincial associations, as may be found desirable."

**Uniform Lien Law.**—"That whereas there is a desire towards uniformity of provincial lien laws, a committee should be appointed by the Canadian Construction Association to report upon the feasibility of obtaining a uniform lien law in all the provinces of the Dominion of Canada."

**Year Book.**—"That we recommend to the executive committee of the association that a year book be published containing texts of existing lien laws, workmen's compensation acts, and apprenticeship legislation in the various provinces, and that this be arranged, if possible, on a self-supporting basis."

### Apprenticeship

Mr. J. M. Pigott, of Hamilton, in an address on "The Dearth of Expert Journeymen," dealt with the operations of the Apprenticeship Act of Ontario. He stated that one of the chief difficulties lay in making the provisions of the Act clear to smaller employers. In Ontario, owing to the existence of many smaller cities, it was necessary to make an eight-week intensive school course, rather than night school classes, compulsory. This had been objected to by some contractors, but could not be changed. Another cause of objection had been the necessity for employers to guarantee eight months steady employment. Amendments were now being made effective to limit this to six months in cases where the longer period was not possible, but such boys as only received six months employment were required to undergo an additional year's training.

### Officers Elected

Mr. C. J. A. Cook, of Montreal, was elected president for the ensuing year, with Mr. George Oakley, M.L.A. of Toronto, vice-president. Other officials elected were as

follows:—W. L. R. Stewart, Sherbrooke, Que., eastern vice-president; H. P. Frid, Hamilton, past president; Ross Harstone, Hamilton, honorary treasurer; Jos. Wilde, Toronto, honorary secretary; representative from general contractors' section, W. H. Yates, Jr.,

Hamilton; representative from trade contractors' section, W. S. P. Hannaford, Toronto; representative from manufacturing and supply section, D. B. McCoy, Toronto.

The next convention will be held at Windsor, Ontario, in 1933.

## ANNUAL REPORT OF THE CANADIAN NATIONAL SAFETY LEAGUE

THE thirteenth annual report of the Canadian National Safety League, together with reports of affiliated provincial branches, recently received, deals with accident prevention and safety activities in the Dominion during 1931. In this co-operative safety movement, the central body acts as a co-ordinating agency for the following provincial leagues: the Ontario Safety League, Province of Quebec Safety League, the Maritimes Safety League, the British Columbia Safety League, the Manitoba Safety League, and the Saskatchewan Safety League.

Each year the Dominion Government makes a grant of \$10,000 for the purpose of assisting the organization in its educational campaign. Safety literature, during 1931, consisting of bulletins, calendars, industrial safety material, etc., was distributed to schools, public officials, Boards of Trade, fire rangers, summer resorts, and steam and electric railways. Tribute is paid to the co-operation extended by the Canadian National and Canadian Pacific Railways, Boards of Trade and Chambers of Commerce, tourist agents, provincial and district foresters, fire rangers, fire and police chiefs, libraries, etc. in the promotion of safety work. Safety literature from the national headquarters of the League was distributed as follows: 16,400 special bulletins, 14,400 industrial bulletins, 14,400 traffic bulletins, 12,800 school bulletins, 5,040 safety calendars and 4,000 reports and circulars.

A particular phase of the work is the attention paid to "outing" dangers, and in this respect there was circulated all over Canada and posted at locations used by campers and tourists a special bulletin dealing with the hazards of swimming, boating, canoeing and forest fires. This was made possible through the assistance of the railroads, summer hotels, fire rangers and guides.

Reference is also made to the report of the safety and accident committee of the Canadian Electric Railway Association. This committee, after referring to its safety policy and activity, stated that "in the majority of cases, Canadian street railways continue to show improvement in accident prevention results, and in fact it may be truthfully stated

that electric railways are in the forefront of the national movement towards accident prevention which is steadily taking a grip on the people of Canada."

*Ontario Safety League.*—In its eighteenth annual report, the Ontario Safety League expresses its appreciation of the assistance received from many organizations in the Province. Prominent in the program of safety activity was the educational campaign conducted in the schools of the province. Also featuring the work were the illustrated lectures on safety and accident prevention given by the field secretary; these were presented in 421 schools, in 65 different cities and towns and villages, and were attended by 207,400 children. In each locality the field secretary was accorded the co-operation of the local Board of Education, teachers, and police departments, the latter providing a speaker to address the pupils on local hazards. Other phases of this work included the organization of school safety patrols, prize essays and drawing contests, and letters to parents.

Accident statistics based on League records indicated that during 1931 the province had a total of 1,738 fatal and 14,839 non-fatal accidents, as compared with 1,838 fatal and 12,689 non-fatal accidents in 1930. It is interesting to note that the same causes which produced the greatest numerical frequency of fatal accidents in 1930 were again operative in the same relative positions, i.e. first, automotive vehicles; second, drownings; third, falls; fourth, railroads; fifth, burns and scalds. The comparisons of fatal accidents during 1931 and 1930 under these five classifications of causes are indicated as follows: automotive vehicles, 571 in 1931 and 524 in 1930; drownings, 341 in 1931 and 322 in 1930; falls, 204 in 1931 and 174 in 1930; railroads, 86 in 1931 and 142 in 1930; burns and scalds, 61 in 1931 and 69 in 1930.

*Province of Quebec Safety League.*—The eighth annual report of the Province of Quebec Safety League contains a review of the activities of the organization during 1931. Particular emphasis is placed upon educational effort in the direction of industrial safety.

"From the League's viewpoint as a whole," it is stated, "our greatest development has been through the inauguration of the Inter-Plant Competition and the Inter-Fleet Contest. In the former is concentrated our efforts to create no-accident workers, and through their co-operation to have no-accident plants. The value of this is obvious; from the employer's viewpoint it means the elimination of petty incidentals which are chargeable to the compensation account in different forms. The inter-fleet contest has as its sole aim the creation of no-accident chauffeurs."

The message of safety in factories was carried by poster service which reached approximately 200,000 workers in the province, while over 300,000 cards were distributed among tourists at strategic tourist points of entry. Educational work among autoists was also conducted by a Vigilance Committee, which kept a close check on violations of traffic laws. In the work of promoting safety, tribute was paid to the hearty co-operation of the clergy of all denominations, rural postmasters, mayors and officials while special mention was made of the broadcasting service of station CKAC.

*Manitoba Safety League.*—The activities of the Manitoba Safety League during 1931 were

mainly concentrated on three sections—prevention of industrial accidents, prevention of traffic accidents and first aid training. The number of industrial accidents reported to the bureau during the year totalled 4,522, of which 11 were fatal. Of the total of accidents, 3,936 were classed as industrial while 577 occurred in the building trades and 9 in elevators.

The number of first aid classes organized was 14 in which 448 persons were instructed while 218 certificates were awarded.

*Saskatchewan Safety League.*—Due to economic conditions in Saskatchewan memberships were difficult to obtain, and the annual report of the provincial body states that to save expenses the annual meeting was dispensed with. Officials elected in 1930 are continuing in office. Owing to stress of business, the president found it necessary to resign, and Judge W. O. Smyth of Swift Current, was elected to fill the vacancy.

The report of the National organization also contains a review of the Safety activities of the Nova Scotia Department of Highways. During 1931, 48 people were killed and 704 injured in motor vehicle accidents as compared with 61 fatalities and 863 non-fatal accidents in 1930.

## LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

### Work of the I.L.O. in 1931

*The following account of the work of the International Labour Organization in 1931 was published in the Monthly Summary, Geneva, December, 1931.*

THE serious preoccupations to which the persistence of the depression have given rise have overshadowed the activities of the International Labour Organization during the year 1931. The Organization, whilst recalling the fact that the true remedies to the present situation are to be found mainly in economic, financial, and political measures which are outside its competence, has demonstrated by its continued efforts in the face of ever-increasing difficulties its will faithfully to carry through the mission of protection which the Peace Treaties have enjoined on it.

It is thanks to it that it has been possible in the first place to measure the extent of unemployment throughout the world, as the statistics provided by the International Labour Office alone give a general review of the situation. Further, Government, employers' and workers' representatives on the Unemployment Committee, the Governing Body and the International Labour Conference have set

out in their speeches certain aspects of the problem special to their respective countries as well as some of interest from the general point of view. The studies undertaken by the Office have already proved to be a foundation for practical proposals.

These have borne mainly on the following points: the desirability of having a better system for placing workers in employment abroad, the undertaking of large-scale public works both of a national and of an international character, the extension of unemployment insurance and the preparation of international agreements on hours of work.

The questions raised by the first two points have been dealt with by the various organs of the International Labour Organization and later of the Commission of Inquiry for European Union and the League of Nations.

With a view to a better organization of the European labour market it has been decided to hold a conference of civil servants and experts from the various national employment exchange systems. This will take place shortly.

In the matter of public works, thirteen Governments have already informed the International Labour Office of interesting

proposals. According to the preliminary estimates of experts, given of course only as a broad indication, the carrying out of such public works could provide in the course of the next few years over 550 million man-days of work without taking into account the indirect effects, such as the revival of certain industries, which might be expected to result. The matter is at present under consideration by a Special Committee of Public Works and National Equipment, set up by the Communications and Transit Organization and on which the Governing Body of the International Labour Office is represented.

This Committee has written to Governments asking them to give further particulars both from a technical and from an economic and financial point of view on proposals to which they have already referred or which they may consider desirable to carry out. It may be hoped that it will be possible to draw up concrete programs early next year.

As for unemployment insurance, the Governing Body of the International Labour Office decided to enter it provisionally as a possible item to be placed on the agenda of the International Labour Conference at its 1933 Session. A final decision on this point will be taken in January.

The International Labour Organization had to overcome more serious difficulties when it sought to initiate practical measures aiming at shortening hours of work. On this point, at the first session of the Unemployment Committee in January, it had to be content with noting the opposite points of view of employers and workers, and requesting the International Labour Office to continue its inquiries. At the next Session of the Governing Body, and at the Conference, the same opposition between the two points of view arose again. It showed itself once more at the December Session of the Unemployment Committee. But this time two views were brought closer together, so that at any rate as regards hours of work during the period of depression it was possible to get a resolution through. This will come before the Governing Body in January, when it will be given its final form.

This resolution sets out certain basic principles which appear to constitute a solid framework for all the arrangements contemplated.

In the first place, the Committee considered that it was more than ever desirable for States to ratify and strictly to apply the existing International Conventions on hours of work, above all, the 1919 Convention on the eight-hour day in industry.

Next, overtime should be abolished wherever technical circumstances, permit.

Further, individual hours of work should be reduced for the mass of workers so as to allow a larger number to be employed and to prevent dismissals. The resolution stated that under the conditions obtaining in the present depression the best results appear to have been obtained by a weekly working period of about forty hours, preferably distributed over five days.

Finally, it is suggested that international negotiations take place with a view to reaching an agreement on these various questions.

It is of interest to recall here that one example has been given this year of the regulation of hours of work in a given industry when the International Labour Conference adopted a Convention in favour of a seven-and-three-quarter hour day in coal mines. The preliminary procedure for the adoption of this Convention had been shortened owing to the exceptional severity of the depression in the coal industry. For the first time an international instrument fixes a limit to the daily hours of work at less than eight a day. It also sets a limit to overtime, and its application will result in the effective reduction of overtime in certain countries. Also, by setting out a uniform method for calculating hours of work in mines it will make it easier to reach agreements concerning production. Thus, in this Convention social and economic factors are both concerned, and it should have most satisfactory results both for the miners and for the general international economic situation.

The preliminary decision taken by the Conference with a view to preparing for discussion in 1932 a means of international regulation on the age of admission of children to non-industrial occupations may also be considered as contributing to a reduction of unemployment. This regulation, whilst filling a gap in the international legislation aiming at the protection of children against the dangers of working at too early an age, will lead to adults needing a living doing work which children often carried out to the detriment of their physical and moral well-being.

The Conference also had before it a proposal for amending the 1919 Convention on the employment of women during the night in respect of two points. The amended text was not adopted. The 1919 Convention thus remains as it stands in accordance with the wishes of the workers' group. It was the first time that the Conference resorted to the procedure contemplated for the possible revision of International Labour Conventions. The

experience thus obtained showed that this procedure, although it is not without danger, can be worked in practice, and it has also shown that the work of protective labour legislation carried on by the Organization has taken a firm hold in the various countries.

The progress of ratifications of International Labour Conventions proves that this work of the Organization has, in spite of all the difficulties created by the depression, found an ever larger place in national legislative systems. On December 31, the number of ratifications officially registered was 449, as against 415 on January 1, 1931. For the first time this year ratifications were received from Lithuania and Liberia. In addition to this, Albania and Colombia, who had hitherto not acted on the decisions of the Conference, have, in the course of the year, taken steps with a view to ratifying several Conventions. In Uruguay the procedure of ratification is going ahead actively for a certain number of Conventions. The Republic of Cuba has now ratified sixteen Conventions, and Chile thirteen. This shows a marked progress in Latin America, and provides a proof of the universality of the Organization.

A further example of this universal character has been provided by the missions which the International Labour Office has sent to China and to Egypt, at the request of the Governments of Nanking and Cairo, and especially by the entry of the United States of Mexico into the International Labour Organization at the time of its entry into the League of Nations.

### **Ratification of International Labour Conventions**

On December 31, 1931, the total number of ratifications of International Labour Conventions registered by the Secretary-General of the League of Nations and officially notified to the International Labour Office was 447.

At the same date, the number of Conventions of which the ratification had been authorized by the competent authority of the countries concerned but had not yet been registered with the Secretariat of the League of Nations was 54.

### **Recent Publications of the Office**

*International Survey of Legal Decisions on Labour Law, 1930.* From 1920 onwards the International Labour Office has published in its Legislative Series the labour legislation adopted in the different countries, but as mere knowledge of the clauses of a law gives no

adequate idea of its actual effects, the Office has, since 1926, supplemented the Legislative Series by an International Survey of Legal Decisions on Labour Law, so that information might also be published concerning the application of these laws by the competent authorities, and particularly by the Courts which deal with industrial matters. The present Survey covers the legal decisions of England, France, Germany, Italy and the United States, these countries representing the most important legal systems, but the subsequent inclusion of other countries is being planned.

The reports for the separate countries are grouped under the following headings: (1) General principles of labour law; (2) Right of association; (3) Participation of workmen in the management of the works (works councils); (4) Individual agreements; (5) Collective agreements; (6) Salaries and Wages; (7) Hours of work; (8) Labour disputes; (9) Procedure in labour cases; (10) Protection and special rights of specified occupational groups; (11) Protection of women, young persons and children, and men disabled in war; (12) Placing and unemployment; (13) Inspection of labour; (14) Social insurance; and (15) Miscellaneous. The reports are given in the form customary in the countries in question, i.e., with particulars of the Court, the names of the Judge and the parties, the date, the source, etc.

The International Labour Office has recently published a report on "Safety in the Manufacture and Use of Acetylene," which is the result of extensive collaboration of leading international experts and will prove a useful contribution to the prevention of accidents in the production and utilization of acetylene.

*Age of Admission of Children to Employment.*—The International Labour Office issued recently the report dealing with the problem of the age of admission of children to employment in non-industrial occupations. This problem passed through the first stage of the double-discussion procedure of the International Labour Conference at the Fifteenth Session of the Conference last year, when it was decided that the second and final stage should be taken at this year's Session of the Conference, opening in Geneva on April 12 next. Accordingly, in July, 1931, the Office despatched to Governments a questionnaire designed to elicit their views on a number of points laid down by the Conference in preparation for the discussion of definite proposals at this year's Session. The replies of governments are reproduced in the report now published, together with a general survey of the

problem in the light of the replies, and draft proposals based on them. By January 1, 1932, the date on which the report was closed for the purpose of including replies, the Office was in possession of replies from the Governments of 31 countries.

The proposals contained in the report take the form of a Draft Convention and a Recommendation. The proposed Draft Convention lays down a general minimum age of 14 years for practically all employments not already covered by the three existing Minimum Age Conventions. Provision is made for a higher minimum where the school-leaving age is higher; for the authorizing of employment under the age of 14 in light work outside

school hours; for special exceptions for certain forms of employment, subject to strict safeguards; and for a higher minimum than 14 for dangerous occupations and some forms of street trading.

The object in view is to accord the benefit of international regulation to children who are outside the scope of the Conventions of 1919, 1920 and 1921. "If the Conference succeeds in this task, the circle of international safeguards in this field will be practically complete. That the Governments generally emphasize the importance of this task and are prepared to co-operate to bring it to a successful accomplishment is abundantly shown by the nature of the replies.

### Survey of Education in Canada, 1930

A survey of education in Canada during 1930, recently published by the Dominion Bureau of Statistics, reports that school attendance in 1929-30 continued to increase in regularity as well as in absolute numbers, the time spent in school by the average child during the year having been at least a month more than that of the child of ten years ago. The better attendance is reflected in the results of the schools, for the proportion of pupils getting as far as the high school grades increased by more than 50 per cent in the same period. This resulted in an increase in the supply of teachers and a raising of the general level of qualifications.

The recorded attendance at Canadian educational institutions, including universities and public and private schools, in 1930 was 2,490,623. To serve this number of pupils, 83,144 teachers and 32,209 schools or colleges were required at a cost of \$165,361,198. Roughly, the schools reached a quarter of the country's population and involved an average expenditure of \$66 on each person enrolled. Four out of every five enrolled were in elementary school grades, while one had completed his elementary education and was continuing his studies. One seventh of the aggregate were practically adults—over sixteen years of age—and of these, every third person was pursuing studies by means of evening classes.

Reference is made to Dominion grants to Technical education, a brief review being given of Federal assistance in this respect. The report notes the enactment in 1931 of the Vocational Education Act, providing for the continuance of Dominion aid to the provinces. (The text of this Act was given in the *LABOUR GAZETTE*, June, 1931, page 642, while the decision to postpone its operation was outlined in the October, 1931 issue, page

1075). The statistics show that in 1929, the last year in which all the provinces were drawing grants under the Technical Education Act of 1919, there were 121,252 pupils in schools receiving aid from the Dominion—45,617 in day courses, 73,877 in evening classes, and 1,447 by correspondence.

Increased efficiency and higher standards in the teaching profession are indicated in the report, which states:—"In terms of certificates—in fact by any available measure—recent years have witnessed a notable improvement in the competence of the teachers employed in the provincial schools. Considered in relation to the greater work that it has been noticed the schools are now doing for the average child, it appears partly as cause and partly as result. Better teachers have facilitated the progress of the pupils, and in turn as more pupils get a secondary education more have qualified for teaching positions and have made it possible for the Departments of Education to raise the standards required for teaching certificates."

That the profession has attained a greater permanence is shown by the increased proportion of second class certificates. In this respect the report observes that the disappearance of third class and other temporary licences has been accompanied by a marked increase in the length of experience of the average teacher. In Manitoba, for instance, the average time that the teacher of 1923 had been engaged in the profession was less than four years; the 1930 teacher, six years.

The proportion of men in the teaching profession has increased steadily since the close of the war, when it was at the abnormally low figure of 15.5 per cent, and now amounts to 21.1 per cent for the Dominion as a whole, which compares with 19.2 per cent for the last year before the outbreak of the war.

UNEMPLOYMENT AND FARM RELIEF ACT, 1931

Report of the Dominion Director of Unemployment Relief

THE Hon. W. A. Gordon, Minister of Labour, laid on the table of the House of Commons, on March 9, the following report from the Dominion Director of Unemployment Relief, dated March 1, 1932.

SIR,—The undersigned has the honour to report as follows concerning the administration of the Unemployment and Farm Relief Act, 1931.

Clause 7 of the Act provides:—

“A report shall be laid before Parliament within fifteen days after the expiration of this Act, containing a full and correct statement of the moneys expended under this Act and the purposes to which they have been applied, together with copies of all orders and regulations of the Governor in Council made under the provisions thereof.”

Clause 8 provides that the Act shall expire on the first day of March, 1932.

Copy of the Act, being chapter 58, 21-22 George V, assented to August 3, 1931, is attached to this report as appendix “A”.

Order in Council, P.C. 2043, was issued August 18, 1931 (see appendix “B”), containing general regulations and vesting the administration of the Act and regulations thereunder in the Minister of Labour subject to the approval of the Governor in Council.

After the issuance of the General Regulations, conferences between the Minister of Labour and the Governments of the various provinces were held, and agreements as provided in the regulations were executed with regard to expenditures for direct relief and for public works and undertakings for the purpose

of providing work for the unemployed. The agreements provided that with regard to direct relief where no employment could be given, the Dominion would pay to the province for remittance to the municipalities such proportion of the expenditures of the municipalities as might be agreed upon, the balance being divided between the municipality and the province. (See appendix “C” for form of agreement). In regard to provincial direct relief, in unorganized districts where no municipalities exist, the Dominion Government's contribution to direct relief was set at 50 per cent.

For municipal public works, the Dominion Government agreed to contribute 25 per cent towards expenditures of municipalities in the five eastern provinces and 50 per cent in the western provinces unless the assumption by the Dominion of a greater proportion of the cost of such works and undertakings be specifically authorized by the Governor in Council. The Dominion contributed 50 per cent to provincial works and undertakings in all provinces and a similar percentage in all provinces was contributed by the Dominion in connection with work carried out on the Trans-Canada Highway. On provincial highways, the Dominion contribution was 50 per cent in Prince Edward Island, Manitoba, Saskatchewan, Alberta and British Columbia, and 40 per cent in Nova Scotia, New Brunswick, Quebec and Ontario. (Appendix “E” shows percentages contributed to each municipal and provincial project.)

Table No. 1 shows the percentages payable by the Dominion Government under the agreements with the provinces.

TABLE No. 1.—PERCENTAGES PAYABLE BY DOMINION UNDER AGREEMENTS

Clause.....	Date of agreement	Direct Relief		Public Works		Provincial Highways 9	Trans-Canada Highway 10
		Municipal 1	Provincial 3	Municipal 6	Provincial 8		
	1931	p.c.	p.c.	p.c.	p.c.	p.c.	p.c.

Alberta.....	Sept. 8....	33½	50	50	50	50	50
British Columbia.....	Aug. 19....	33½	50	50	50	50	50

Percentages for clause 6 may be increased by the Governor in Council (see Clause 6 of agreement, appendix “C”).

The agreements entered into with the provinces provided that the province would submit to the Dominion for approval of the Minister of Labour “schedules” setting forth the pub-

lic works and undertakings proposed to be carried on by the provinces and municipalities under the provisions of the agreement. Form of schedule used is shown in appendix “D”.

P.C.'s 2608 and 2673 dated October 19, 1931, and October 23, 1931, appointed a Sub-committee of Council on unemployment relief consisting of: the Minister of Labour, Chairman; the Right Hon. Sir George H. Perley; the Minister of Public Works; the Minister of Agriculture; the Minister of Fisheries; the Solicitor General; with the Dominion Director of Unemployment Relief as Secretary. The com-

mittee was empowered to deal with the proposals of the municipalities and provinces as put forward by the provincial authorities.

At the date of this report, March 1, there had been approved under the agreements with the provinces the amounts shown in Table No. 2 as a Dominion contribution to municipal and provincial expenditures for public works.

TABLE No. 2.—DOMINION CONTRIBUTIONS TO PROVINCIAL AND MUNICIPAL EXPENDITURES AS AT MARCH 1, 1932

Appendix "E" gives a detailed statement by provinces of the municipal and provincial works approved, together with particulars of Dominion, provincial and municipal contributions thereto.

Orders in Council authorizing approval of municipal and provincial works referred to in table No. 2, and Orders in Council authorizing payment of expenditures in connection with the said approvals as set forth in table No. 2 are submitted with this report.

Table No. 3 shows expenditures authorized by Order in Council for works and undertakings to relieve unemployment, the Dominion Government paying the entire cost.

TABLE No. 3.—FEDERAL WORKS AND UNDERTAKINGS

Department, etc.	Cost of works approved	Amount expended

pendix "F" gives details of Department of Public Works expenditures.

It has not been possible to include in this report statistics showing the volume of employment created up to the date of this report, the latest figures available being as at January 31, 1932. Table No. 4 shows the volume of employment created by the carrying out of the federal, provincial and municipal works above referred to.

TABLE No. 4.—EMPLOYMENT AFFORDED TO JANUARY 31, 1932

Province, etc.	*Individuals given employment	Number of mndays work given

\*These figures do not include repeaters, i.e. no one individual is counted more than once.

Details of the approvals referred to in table No. 3 form part of Orders in Council authorizing the said works submitted herewith. Ap-

The above table does not take into account men engaged in the production and distribution of the materials and equipment necessarily involved in the carrying out of the works contributed to.

Accounts for direct relief have been paid as rendered by municipalities and approved by provinces. Table No. 6 shows disbursements for direct relief to March 1, 1932.

Table No. 5 shows number of individuals reported by provinces as having received direct relief to January 31, 1932.

TABLE No. 5.—DIRECT RELIEF GRANTED  
TO JANUARY 31, 1932

Province, etc.	Total number given direct relief	Number of meals given	Number of nights' lodging given
Prince Edward Island	353	Nil	Nil
Nova Scotia	34,636	340	338
New Brunswick	623	Nil	Nil
Quebec	298,489	1,565,210	305,297
Ontario	178,650	406,000	106,000
Manitoba	63,214	18,649	1,666
Saskatchewan	29,714	111,119	25,328
Alberta	60,196	88,430	Nil
British Columbia	75,366	33,923	23,332
Total	741,241	2,223,671	462,461

In addition to expenditures for direct relief shown in table No. 6, the Saskatchewan Relief Commission report disbursements to February 20, 1932, amounting to \$4,275,991.08. This covers relief given to approximately 53,727 families which includes at least 322,362 individuals.

On receipt of accounts at Ottawa with prescribed certificate from provincial authorities they are audited by the Unemployment Relief Branch of the Department of Labour and an Order in Council requested to authorize payment; in due course requisition is made on the Finance Department for cheque to cover the account. Before cheque is issued the account is audited by the Auditor General.

Table No. 6 shows, at date of this report, March 1, the approved Dominion commitments for works, the accounts paid, and balance unpaid in respect of approved works. The table also shows amount of direct relief accounts paid.

TABLE No. 6.—DOMINION COMMITMENTS AND ACCOUNTS PAID

Arrangements were made with the Canadian Passenger Association whereby a reduced fare was granted on railways from urban centres to relief camps established by provinces; and for the movement of unemployed farm help from urban centres to farms under arrangements made by provinces, municipalities, and farmers, whereby farm help would be given employment during the winter; and

for the movement of unemployed to camps established in different centres for land clearing. The special rate arranged was .01½ cent per mile. Arrangements were made by which the Dominion Government and the province concerned each paid 50 per cent of the cost of such transportation. Upon termination of employment, providing that the worker re-

mained ninety days or more, a return fare was arranged at the rate of .02 cent per mile payable by the worker.

Table No. 7 shows the total expenditures for railway transportation and the amounts collected from the province.

Under authority of subsection C of section 3 of the Unemployment and Farm Relief Act, 1931, the Governor in Council assisted certain of the provinces by way of loans or advances in the financing of maturing obligations which the provinces were, at the moment, unable to refinance; also, in order that

speedy and unhampered prosecution of the measures instituted to relieve distress and provide employment might be carried out. The following statement shows the amounts loaned or advanced, the purpose for which loans or advances were made and the security taken therefor:—

## PROVINCE OF MANITOBA

Purpose for which loans or advances were made	Security taken	Amount loaned or advanced

## METHODS OF UNEMPLOYMENT RELIEF IN VARIOUS CITIES IN CANADA

UNDER the title "Canada Sees it Through", a useful survey of the methods followed by typical communities in Canada in meeting the difficulties caused by the present industrial depression is given in the current issue of *Child and Family Welfare*, the official publication of the Canadian Council on Child and Family Welfare. It is recalled that in June, 1929, four months before the first crisis in the stock markets, the Council published a pamphlet entitled "The Time to Plan is Now," which laid stress on the periodic upheavals in the economic system during the past half century, and that in Canada, even in normal years, a constant percentage of between 4 and 5 per cent of the work people are without employment. The extent of unemployment at the close of 1931 is discussed, the following conclusions being reached:—

"Our usual seasonal burden of 100,000 to 125,000 unemployed or underemployed is swollen to a load of 400,000 to 450,000, and all our business of trade and existence is convulsed with a simultaneous contraction, which means that all those resources of social assistance which may usually be developed for the relief of distress are equally restricted, and unusual means are required to cope with the situation. What is the usual problem of the private social agencies and the public relief authorities, generally carried through the interest of a too small proportion of the citizen body, and the routine of public relief, has suddenly become the major interest of the national life, and almost the chief responsibility and activity of government."

The present emergency is shown to have brought about co-operation to an extent before unknown, between private relief agencies, and governmental authorities, and also between the federal, provincial, and municipal governments. However, "while funds for relief works and for direct relief have been made available in recent months under the federal scheme, to a degree never before necessitated, the principle has been assiduously safeguarded, that responsibility rested primarily upon the local units of government for the administration of all measures of direct relief, the federal authority merely concurring in measures, and approving them, to the degree that they were contributing financially to the amelioration of a situation otherwise beyond the resources of local government. . . The federal government's attitude has consistently been one of supplementary assistance in an emergency situation."

Considering that unemployment is to some degree a permanent problem the Council re-

commends that the various social agencies should endeavour to reach a definite understanding as to their respective spheres of service, and of the responsibilities that might in future be assumed by the different units of government.

The report proceeds to describe the measures taken in the larger Canadian cities during the past two years to meet the strain of unemployment. "There is no marked uniformity of principle on programs in these efforts," it is stated, "beyond the degree to which they all depend upon federal financial participation. However from a résumé of them, one may gather much of valuable suggestion at this time, when the need of intensive study for fully adequate handling of the immediate future seems so strongly indicated." The following paragraphs are mostly taken from the report:

### Montreal

Two civic committees were appointed in Montreal in the autumn of 1930, one on Unemployment and Employment, and one on direct relief. The industrial Commission on Employment, as the first one was called, was composed of leading men in the business life of Montreal. This Committee was charged with all negotiations between the civic and provincial or federal authorities in respect to expenditure on the relief works program. Projects for relief works were discussed and advanced within this committee. It also reviewed all civic contracts, from the point of view of requiring the use of Canadian materials and local labour, unless some insurmountable difficulty existed. Its members maintained constant touch with local manufacturing and similar firms, suggesting special activities for the maintenance of staff during slack periods, and other possible lines of "evening out" production and labour employment.

The second committee dealt entirely with direct relief, under the chairmanship of the Director of Municipal Assistance. It included representation from the four great elements in Montreal's population,—Roman Catholics, French and English speaking, Protestants, and Jews. Through their discussions, arrangements were made for the apportionment of public money available for direct relief to these religious groups *pro rata* to population. (Roman Catholics 74 per cent; Protestants 19 per cent; Jews 7 per cent). The Montreal system faithfully reflects the traditional Quebec policy of public assistance to private philanthropy rather than direct administration of

public, social services. Relief to families in their own homes was arranged on behalf of the French-speaking Roman Catholic group through the conference of St. Vincent de Paul Societies. The Welfare needs of the English speaking group were served by the new Catholic Welfare Bureau. The Montreal Council of Social Agencies (Protestant and non-sectarian) formed their own special sub-committee on unemployment, which received the grants on behalf of this group for relief to Protestants only, and co-ordinated work and funds among the needs of the Family Welfare Association, the Emergency Unemployment Relief Committee (handling British Protestant families), the Homeless Men's and the Office Workers' Bureau. The unemployed foreign family was handled through special workers from the Family Welfare Association, and the Family Welfare Division of the Jewish Philanthropies acted on behalf of their co-religionists.

The report describes in full the methods that are followed in the granting of relief or providing work. At the beginning of December, 1931, the Emergency Unemployed Relief Committee was carrying 2,662 families as against 2,305 in October, with expenditures of \$35,438.26 for the month as against \$26,931.95 for the preceding month. Comparative figures for November 1930 were 422 families and expenditure of \$5,812.60.

The Family Welfare Association had a caseload of 3,264 families (794 in Verdun and 2,470 in Montreal) in 1931, with expenditure of \$183,265 as against 2,276, with expenditure of \$125,360 in 1930. Of the total of 3,264 families, 1,742 had never been known to the family agency before: 826 were families returning from previous years: while 696 were carried into 1931 from December, 1930.

The English Catholic Welfare Bureau, established in December, 1930, only, naturally lacks comparative statistics, but was carrying 750 families, solely on unemployment relief, at the middle of December, 1931.

The Baron de Hirsch Institute's load as December, 1931, opened was 380 relief cases, with expenditure of \$13,484.71 for direct relief, contrasted with corresponding figures of 207 families and \$6,926.49 expended in 1930. Month by month, the load and costs have climbed since the summer of 1931, whereas there was a marked decrease of expenditure for relief in October and November, 1930.

The inclusive figures of statistics supplied by the city for December, 1931, showed expenditures of \$230,266.43 for that month on 12,215 families, with 55,364 dependants; and night lodgings given amounting to \$3,944, with 420,469 meals. The November, 1931, totals

were \$150,539.22 expenditure on 8,931 families (39,772 dependants); 73,543 lodgings and 395,088 meals.

*Homeless Men.*—The Homeless man situation is an ever-present problem in Montreal, for handling which the Meurling Refuge is administered directly as a civic institution, from civic funds, the capital having been met in part by a bequest. It operates the year round, with accommodation for 708 men. In 1929 a special sub-committee of the Montreal Council of Social Agencies was formed, in co-operation with the English Catholic group, and obtaining the use of an old school building set up another hostel, which operated until April, providing 440,504 meals to 8,062 men, at an average cost of 8-6 cents a meal, including overhead. The catering was done by a commercial firm who donated everything but wages and materials. The hostel was closed in April, 1931, but the same service was developed again in another building in the early autumn of 1931, and is serving over 6,000 men daily. It is administered by a committee of citizens acting on behalf of civic authorities who have assumed entire responsibility for relief of the homeless man this winter.

In the autumn of 1931, the Montreal program for the care of the homeless man was expanded to include occupational and recreational activities. A day recreation shelter is operated by a special committee of the Montreal Council of Social Agencies. It receives men of all languages and creeds.

*"White-Collar Workers."*—The Council of Social Agencies Committee, through the assistance of the personnel department of the Sun Life Assurance Company, opened a special bureau for the registration of Unemployed Office Workers. Through a process of special interviewing when seeking employment, it was ascertained whether they were in other need, and if so, they were referred to a special division, where assistance was given, sometimes as a "loan". Very few women appeared in need of assistance, but 184 single men and 94 families were given help, in the 3,712 registrations for employment. A similar bureau is being operated this winter.

Homeless women who apply are referred to the Y.W.C.A. and are cared for by them. Homeless women manual workers are cared for by the Y.W.C.A. and in the Sheltering Home.

L'Assistance Publique, a private organization with a civic grant, has operated for several years, providing a limited amount of overnight care for women and children in need. The Sheltering Home, a member of

Financial Federation, gives temporary care and shelter to any woman or child in need. These agencies have continued their regular services.

### Toronto

In October, 1930, the Board of Control of Toronto appointed a Civic Relief Committee as the result of a series of conferences under the leadership of the Federation for Community Service. A relief works program of which the city assumed 50 per cent of the cost, was already under way. A Central Bureau was established with a reading and rest-room for the unemployed in the back, and registration offices in the front. The number of days work given during the months from November to April totalled 112,177 at a minimum rate of \$4.80 per day of 8 hours—a total wage bill of \$538,450. Handicapped men were used as watchmen, etc., being paid a total of \$22,068.

The Civic Committee enlisted the Service Clubs, and similar mens organizations in an effort to have citizens provide odd jobs, during the winter, to assist the hundreds unfit for heavy manual work. This was followed in May by a "Clean-Up, Paint-Up" Campaign which also provided very considerable employment of a varied nature.

*The Homeless Man.*—The Committee made a survey of services for the homeless man and decided that seven organizations were rendering service of a type that could be officially recognized—five providing food and shelter, and two others food once a day. Another agency was planning to open a Veterans' Hostel. "Bread-lines" and "bench warmers" were giving their evidence of the congregation of thousands of destitute men in the city. The Civic Committee decided to maintain the policy of extending provision for the homeless man through co-operation with the private agency rather than by the development of municipal accommodation. It decided that civic responsibility should involve rather administrative provisions to prevent overlapping and exploitation. The Central Bureau mentioned above was therefore opened under a special director for (a) the registration of all destitute, homeless men; (b) the co-ordination of civic and private agencies giving relief to homeless men; (c) the maintenance of information and statistics re the needs of this group.

From December to April, 172,772 nights' lodgings and 527,445 meals were provided, the daily average of the former being 899, with a peak load of 1,043, and of meals 2,511, with a peak load of 3,424. At the beginning of 1931,

the daily load was 1,391 men, and 5,753 meals. The total number of single men cared for in the Central Bureau in 1931 was 10,930, of whom 11.7 per cent were minors.

*Non-residents.*—Through co-operation with the Immigration Department 331 non-residents were placed on farms; 70 more were returned to other municipalities upon affidavit that they would there have means of support. The number of non-residents was so great that the Committee set under way energetic measures for the operation of work-camps or other federal-provincial measures to provide for some measure of assistance in their maintenance in 1931-32. These camps are now in full operation under a co-operative federal-provincial arrangement, men being assigned there pro-rata, from various communities.

*Family Welfare.*—The family welfare field had been well organized in Toronto for some years, the Neighbourhood Workers' Association for the Non-Roman Catholic group, the Catholic Welfare Bureau and the Jewish Family Welfare Bureau handling these services..

In Toronto, the private agencies restrict their funds to providing case working services and towards meeting rent, clothing and supplementary food needs. The Division of Social Welfare, with its own staff, but with relief provided through the House of Industry, was thus left with no funds for these special services for its families, but during the winter of 1930-31, the civic employees contributed one day's wages per month to provide a special fund for these supplementary purposes for the civic social welfare division. Late in 1931, the civic department gave notice to the House of Industry that it intended as soon as feasible to administer civic relief as well as service, to the families for which it assumed responsibility. The co-ordination of relief work with the family welfare services meant that the married man was able to pay rents with his earnings; food and fuel came from the city funds; and the private agencies assisted in boots, clothing and other necessities. Over 5,000 of the 9,000 given civic work were not known to any of the social agencies, and by this provision of work were saved the experience of being "on the city."

*Summary.*—In December, 1931, relief through civic sources was being provided roughly to 11,033 families in Toronto at a cost for December of \$222,909.64 as against 11,040 families for the whole twelve month period of April to March, 1931, and a peak-load in January, 1931, of 6,040 families at \$106,678.47 monthly expenditure, on direct unemployment relief. By January 27, 1932, the number of

families had passed 12,000. General indications were that all along the line the increased severity of this year's condition was comparable with these revelations in the family field.

The family agencies last year recorded an aggregate peak load of 4,340 families under care in January, 1931. In December, 1931, the Neighbourhood Workers alone reported 2,336 active cases at the end of November, as against comparable figures of 1,641 in 1930, and 1,198 in 1929. New cases in the month totalled 464 (as against 404 and 232 in other years). Of the total of 2,336, no less than 904 were unemployment cases, "taken on" in November. The number of active cases, new cases, and unemployment cases all showed a steadily mounting tide through the summer and autumn months. The December statistics, it is stated, will be "appalling" when available.

Rent payments, made available through an Emergency Loan Fund, indicate as nothing else the severity and persistency of the situation—these totalling \$102,434.22 in 1931, as against \$6,818.15 in 1930 and \$5,565.23 in 1929.

The number of families under care was not available from the Jewish Philanthropies or the Catholic Welfare Bureau but the latter's expenditures on relief in December, 1931, revealed an increase of nearly 25 per cent over December, 1930, and a mounting tide during the autumn months.

### Vancouver

"The coast city," it is stated, "has been faced with an exceedingly heavy load of dependency throughout 1930 and 1931, its problems being complicated by necessary reorganization of its whole relief machinery in 1930. Col H. W. Cooper, formerly warden of the Dominion Penitentiary, was named as city relief officer, and the city relief office took over direct responsibility for all relief services, adding a large staff of emergency investigators, entirely men, for this purpose. Registration of the unemployed and their allocation for employment were also handled directly within the relief division. Food and fuel orders were issued to married men, and when deemed necessary, rents and light bills were paid. Comparatively little work was available (though a special canvas for 'odd jobs' was organized) and over 6,000 married men required assistance during the fall and winter of 1930-31.

"Over 5,000 single men applied for relief. Here hostels were not operated, but meal tickets on specified restaurants were issued, negotiable first at the rate of 50 cents, and later 35 cents a day. Bed tickets on specified lodgings were also issued to the value of \$2

per week. This relief was, at first, generally available, but the load mounted so rapidly that it was restricted in the spring of 1931, to residents of a continuous twelve-month period in the city. Continuous investigation was required and numerous convictions obtained against "fraudulent beneficiaries."

"In the autumn of 1931, special lumber and construction camps were opened, together with a 'light work' camp for men of less robust health. These were organized under the provincial labour and health departments, and men assigned to them on a co-operative arrangement between the municipalities and governments. A system of registration introduced by the provincial government in the autumn of 1931 required that relief or relief work could be extended only to holders of registration cards. This has greatly reduced the influx of transients to the Province."

### Winnipeg

Winnipeg, it is stated, has suffered more than any other city from the dislocation of its industrial life, aggravated by the slackening of the wheat movement. No great voluntary agencies had existed such as the private agencies at Montreal, Toronto, Ottawa, Hamilton and Vancouver; and the problem in Winnipeg has been handled entirely by the public authorities, through an Unemployment Relief Committee consisting of six aldermen, and two representatives of the Provincial government one of whom also represented the Dominion authorities. In 1931, the Dominion government also appointed a special liaison officer for Winnipeg, and for St. Boniface. This committee meets weekly and reports to the City Council.

In 1930-31, in anticipation of the large number of applicants for unemployment relief, buildings were erected in the city woodyard and all the administration, registration and issuance of relief was carried on here, by a temporary staff numbering forty-five. The wood was brought from the city's own wood camps. Every unemployed man had to register at the city woodyard, and be a bona fide resident, which meant that if a married man, he must have resided in the city for the immediately preceding twelve months, and if a single man for twelve out of the preceding thirty-six months. During the winter married men were not required to work, but from April 15 they were required to do two days' free work, every eight weeks. They were given car tickets to and from work. Home investigation followed and relief was distributed according to a budget, but the relief permit was renewable every eight days.

Water, light, and even current rent were carried if the emergency in each case so demanded. Current rent was assumed only where rent was two months in arrears. Every married man was required to sign a statement to accept work offered at the current minimum wage. The relief order was in the form of an order for a specified amount for a list of specified items which would be honoured by any merchant in the city who had agreed to provide these items at a price set by public tender. Clothing was provided on order of a school board officer. A doctor was kept at the relief office and in case of sickness, drugs, medical and nursing service provided.

Winnipeg is described as the first large city in Canada to attempt to have men work out the value of relief given, but Saskatoon may also advance this claim.

The report describes work for single men was provided in 1930-31 on a drainage ditch in return for maintenance and also in the city woodyards, each man being required to put in ten days' work. They were given meal tickets for three meals daily at 20 cents a meal, at any restaurant they chose, and bed tickets at 25 cents a night. On April 13, 1931, the number of meals for single men was reduced to two per day, and those not in boarding houses were fed at two large special dining halls. Boots, mitts, underwear and other clothing were furnished as required. Sleeping accommodation for 300 men and recreation rooms were arranged at the Dominion Immigration halls. Here literature and writing materials were provided. Each man was required to report at the woodyard weekly for the following week's supply. Only the registered single men were used in the wood camps, where \$1.50 was paid per cord of wood cut.

From October 1, 1930, to July 31, 1931, under the Provincial Commission, no less than \$2,600,000 was spent on providing 356,342 man days' work, on special works (each man received an average of 10.68 days' work). Direct relief to 14,015 cases, involving 43,823 persons required \$1,573,933.66 in the same period. By December, 1931, relief expenditure in Winnipeg had mounted roughly to \$300,000 per month, with the load showing little diminution, but some anticipation that March would record a recession. The slightly higher price of wheat was making for a better spirit in the province.

In 1931 an interesting development was the founding of a branch of "Good Will Industries"—a type of service and salvage shop, known to United States agencies, by Grace

Church, Winnipeg. Here partial employment will be provided from private funds.

Voluntary effort became organized with the formation of the Greater Winnipeg Welfare Association, formed in October and November, 1931, with the purpose of co-ordinating the activities of agencies already in the field.

"There would seem," the report concludes, "to be reasonable evidence for anticipating that out of the cost and experience of this period, Winnipeg will emerge with the structure of her family welfare and relief services greatly strengthened."

### Other Cities

The report describes also the methods of relief that are being followed in the following cities: Ottawa, Hamilton, Quebec City, Regina, Saskatoon, Edmonton, Calgary, Medicine Hat, Lethbridge, Victoria, Sydney, Halifax, New Glasgow, Saint John, Moncton, Fredericton, Oshawa, Brantford, Kitchener, Sault Ste. Marie.

The Edmonton local unit of the Women's Canadian Labour Council adopted a resolution on February 15, in favour of the enactment by the Dominion Parliament of a measure providing for the adoption of a system of State medicine in Canada. The preamble to the resolution declares the present hospital system to be wasteful and inadequate; that it lacks proper organization and fails to provide proper services to all sections both of the urban and of the rural population; that the present depression has created a health problem unprecedented in the history of the country, with doctors and hospitals unable, under the existing system, to collect their fees; and that much suffering and death have resulted from delays, especially in maternity cases and surgical operations, owing to the patient's inability to pay.

A delegation from the United Farmers of Ontario recently called the attention of the provincial government to conditions in the milk industry in the Province. They stated that producers were asked to accept and consumers to pay prices in order to pay interest in capital that was not originally invested and was created for the purpose of exploiting the producer and consumers. The organization demanded that the government take immediate drastic action to protect the people by reducing the interest on mortgages and making it impossible for farmers to be driven from their farms by sheriffs.

## WISCONSIN ADOPTS FIRST UNEMPLOYMENT INSURANCE ACT IN UNITED STATES

THE State of Wisconsin recently adopted an Act relating to Unemployment Reserves and Compensation, which is stated to be the first act to be passed in the United States making provision for unemployment insurance. The Act provides that, with certain exceptions, employers of ten or more workers must build up unemployment reserves to be distributed to their employees when work fails. Reserves must be built up and payments made entirely by the employer. Workers may co-operate to increase unemployment benefits; but they are not obliged to meet any part of this basic payment.

Unemployment payments are made for not more than ten weeks in a year, and the highest payment is \$10 a week, and the lowest \$5. Between these figures, payments are made on the basis of 50 per cent of the wages earned by the laid-off worker. If the worker received wages of \$10 or less a week while working, his unemployment payments are \$5 a week; from that up to \$20 a week, he gets 50 per cent of his wage; but he cannot get more than \$10. The total benefit he receives from the present law ranges therefore between \$50 and \$100 a year. A worker is not paid unemployment benefits while on strike, but the law provides that no employee shall forfeit his right by refusing to act as a strikebreaker, or by refusing employment which tends "to depress wages and working conditions."

Employers may escape coming under the law by establishing satisfactory unemployment reserves and payments of their own. If by June 1, 1933, employers of 175,000 Wisconsin workers have adopted voluntary unemployment benefits as good as those provided in the law, the measure will not go into effect. Further, employers who guarantee 45 weeks' work a year and 26 hours a week are exempted from the compulsory provisions of the law. This provision is designed to encourage the stabilization of employment.

The preamble to the Act declares as follows:—

"(1) Unemployment in Wisconsin has become an urgent public problem, gravely affecting the health, morals and welfare of the people of this state. The burden of irregular employment now falls directly and with crushing force on the unemployed worker and his family, and results also in an excessive drain on agencies for private charity and for public relief. The decreased and irregular purchasing power of wage earners in turn vitally affects the livelihood of farmers, merchants and manufacturers, results in a decreased demand for

their products, and thus tends partially to paralyse the economic life of the entire state. In good times and in bad times unemployment is a heavy social cost, now paid mainly by wage earners. Industrial and business units in Wisconsin should pay at least a part of this social cost, caused by their own irregular operations. To assure somewhat steadier work and wages to its own employees, a company can reasonably be required to build up a limited reserve for unemployment, and out of this to pay unemployment benefits to its workers, based on their wages and lengths of service.

"(2) The economic burdens resulting from unemployment should not only be shared more fairly, but should also be decreased and prevented as far as possible. A sound system of unemployment reserves, contributions and benefits should induce and reward steady operations by each employer, since he is in a better position than any other agency to share in and to reduce the social costs of his own irregular employment. Employers and employees throughout the state should co-operate, in advisory committees under government supervision, to promote and encourage the steadiest possible employment. A more adequate system of free employment offices should be provided, at the expense of employers, to place workers more efficiently and to shorten the periods between jobs. Education and re-training of workers during their unemployment should be encouraged. Governmental construction providing emergency relief through work and wages should be stimulated.

"(3) A gradual and constructive solution of the unemployment problem along these lines has become an imperative public need."

### An Economic Council in Denmark

On January 7 the Danish Government decided to set up an Economic Council. This council, which is to work directly under the Prime Minister, can be convened to discuss any questions that may arise out of the prevailing economic situation, with special reference to matters that may affect the national currency. The membership of the Council will include representatives of employers, trade unions, co-operative organizations, economists, etc., as well as various high officials. Members of the Government will have the right to attend meetings of the Council with a view to laying questions before it and taking part in the discussions.

## EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN JANUARY, 1932

THE following information as to the employment situation in Canada is based upon reports from four sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting on February 1 was 7,766, the employees on their payrolls numbering 819,175 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for

January was 1,849, having an aggregate membership of 187,891 persons. It should be understood that the report on the number of unemployed workers refers only to organized labour, definite figures not being available as to the number of unorganized workers who were without employment during the period reviewed.

(3) The Department of Labour receives reports from the 68 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 61 cities throughout Canada, showing the value of permits granted during the period for various classes of building construction.

### (1) Employment Situation at the Beginning of February, 1932, as reported by Employers

Employment at the beginning of February, as on the same date in 1931, showed a decrease, according to data tabulated by the Dominion Bureau of Statistics from 7,766 firms whose payrolls aggregated 819,175 persons, compared with 837,312 on January 1. The index, based on the 1926 average as 100, declined from 91.6 in the preceding month to 89.7 on February 1, while on the same date in 1931, 1930, 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, it was 100.7, 111.6, 110.5, 102.0, 96.6, 91.8, 87.1, 91.7, 90.6, 79.9 and 91.2, respectively. Employment was thus at a lower level than at the beginning of February in most years of the record.

Important recovery was shown in manufacturing, especially of textile, iron and steel, leather, rubber and lumber products. On the other hand, decided declines (largely seasonal in character) were noted in construction, especially in highway work, and in trade, transportation and mining. The losses in construction were unusually large, as the 1931 unemployment relief programs in some provinces advanced towards their completion and in others were retarded by unfavourable weather conditions.

#### Employment by Economic Areas

Reductions were recorded in all provinces, those in the Maritime Provinces being most pronounced.

*Maritime Provinces.*—Construction reported especially heavy losses in the Maritime Provinces, but decreases were also indicated in

logging, mining, communications and trade; the reductions in bush operations were partly due to unfavourable weather conditions. On the other hand, improvement was shown in manufacturing, particularly in lumber and metal factories. Statistics were received from 563 firms, employing 68,655 workers, compared with 76,419 at the beginning of January. A rather smaller falling-off had been recorded on the same date in 1931, when the level of employment was higher.

*Quebec.*—Increases in manufacturing (notably of textile, rubber, leather, iron and steel and pulp and paper products), and in logging were offset by declines in mining, transportation, trade and construction. The working forces of the 1,833 cooperating employers aggregated 230,598 persons, as against 231,739 in their last report. A decrease had also been noted on February 1, 1931, but the index was then higher.

*Ontario.*—Considerable gains were made in manufacturing, chiefly in the iron and steel, textile, leather and lumber divisions; communications and logging also reported heightened activity, while there were large seasonal reductions in trade, transportation and construction, and mining was also slacker. According to data received from 3,511 firms, their staffs declined from 350,788 at the beginning of January, to 346,736 on the date under review. General improvement had been indicated on February 1, 1931, when the volume of employment was greater than at the beginning of February of the present year.

*Prairie Provinces.*—The decrease in personnel reported by the firms making returns at the beginning of February was on a much smaller scale than that noted on the same date last year, the workers released numbering less than a third of those laid off on February 1, 1931. The index was, however, lower than in the winter of last year. Statements were tabulated from 1,117 employers, whose staffs declined by 2,121 persons to 111,184 on the date under review. Logging was more active, and railway construction also showed some improvement; manufacturing reported little general change, while transportation and trade were seasonally inactive.

### Employment by Cities

The trend of employment was downward in Montreal, Toronto, Ottawa, Hamilton, Windsor and the adjacent Border Cities, Winnipeg and Vancouver, while in Quebec city a slightly favourable tendency was in evidence.

*Montreal.*—Manufactures showed considerable recovery, especially in the footwear, iron and steel and textile groups, but large seasonal losses were indicated in trade and building construction. On the whole, there was a small decrease in Montreal, according to the data received from 1,037 firms employing 127,877 workers. A gain had been recorded on February 1, 1931, when the index was higher.

### EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

*British Columbia.*—There was a contraction in employment on February 1; this took place mainly in construction, but manufacturing, logging, mining, communications, services and retail trade also showed a falling-off. The working forces of the 742 reporting firms aggregated 62,502, a decrease of 2,559 persons as compared with their staffs in the preceding month. A small reduction had been indicated on February 1, 1931, and the index was then many points higher.

Index numbers of employment by economic areas are given in Table I.

*Quebec.*—Returns tabulated from 134 employers in Quebec city showed that they had slightly increased their staffs to 12,075 persons at the beginning of February, the index rising from 100.8 on January 1 to 100.9 on the date under review. Manufacturers reported improvement, chiefly in boot and shoe factories, but trade was seasonally dull. The index was lower than on the corresponding date last year, although employment had then shown a reduction.

*Toronto.*—Heavy seasonal losses took place in trade, and transportation was also slackier,

but there were important gains in manufacturing, especially of textile and iron and steel products. The result was a decrease of 2,278 in the number employed by the 1,149 co-operating firms, who had 115,242 employees. A smaller decrease had been indicated on February 1 a year ago, and the level of employment was then higher than on the date under review.

*Ottawa.*—There were moderate declines in manufacturing, transportation, construction and trade in Ottawa; 161 employers had 13,221 workers, or 522 fewer than on January 1. Employment was in smaller volume than at the beginning of February, 1931, the tendency then having been favourable.

*Hamilton.*—Employment in Hamilton showed a decrease, mainly in construction and trade, in which the losses were of a seasonal character; manufacturing establishments reported no general change. Statistics were tabulated from 239 firms employing 28,579 persons, compared with 28,941 in the preceding month. The index was many points lower than on February 1 a year ago, when improvement had been reported.

*Windsor and the adjacent Border Cities.*—Considerable recovery was indicated in automobile factories, but the completion of certain construction works undertaken for the relief of unemployment resulted in the release of a large number of workers, so that, on the

NOTE.—The "Relative Weight" in Table I shows the proportion of employees in the indicated area to the total number of all employees reported in Canada on the date under review.

Relative weight of Employment by Districts as at Feb. 1, 1932.....	100.0	8.4	28.1	42.3	13.6	7.6

whole, there was a reduction in employment in the Border Cities. The 138 co-operating firms reported 10,458 workers, as against 10,668 on January 1. Activity was not so great as on the same date in 1931, when gains had been noted.

**Winnipeg.**—The number employed in Winnipeg showed a contraction, mainly in construction and transportation. Returns were compiled from 375 firms with 37,682 employees, compared with 38,420 in the preceding month. Employment was not so active as at the beginning of February last year, although curtailment had then also been indicated.

**Vancouver.**—The manufacturing, construction and trade groups reported reduced employment, but transportation was brisker.

NOTE.—The "Relative Weight" in Table 2 shows the proportion of employees in the indicated city to the total number of all employees reported in Canada on the date under review.

Feb. 1.....	87.4	100.9	97.8	104.5	90.2	81.4	89.6	90.1
Relative weight of employment by Cities as at Feb. 1, 1932...	15.6	1.5	14.1	1.6	3.5	1.3	4.6	3.4

The 318 reporting firms employed 27,797 persons, as against 28,254 on January 1. The index was lower than on the same date in 1931, when improvement had been reported.

Index numbers of employment by cities are given in Table II.

### Manufacturing

The revival in factory employment was not so marked as on February 1, 1931, when the index was higher than on the date under review. Statements were tabulated from 4,756 manufacturers employing 423,913 operatives, compared with 414,931 in the preceding month. The most noteworthy recovery took place in the iron and steel and textile industries; within the former group, the automobile, crude, rolled and forged, agricultural implement and

heating appliance divisions showed the largest advances, while in the latter, garment and personal furnishing, cotton, woollen and silk, knitting and headwear factories reported especially pronounced improvement. The lumber, leather and rubber divisions also registered important gains, while there were losses in food, pulp and paper, electric current and some other plants.

*Animal Products—Edible.*—There was a further decline in employment in this group at the beginning of February; the reduction involved more workers than that noted on the corresponding date last year, and the index was then slightly higher. Statements were tabulated from 195 firms employing 16,318

workers, as compared with 16,818 in the preceding month. Meat-preserving plants reported the greatest losses.

*Leather and Products.*—Employment in boot and shoe factories showed a large increase; the situation was more favourable than on the corresponding date of a year ago, when smaller gains had been noted. A combined working force of 17,309 persons reported by the 236 co-operating manufacturers, who had 15,782 employees at the beginning of January. Most of the advance took place in Quebec and Ontario.

*Lumber and Products.*—Improvement was indicated in sawmills and in furniture, container, vehicle and other lumber-using fac-

NOTE.—The "Relative Weight" in Table 3 shows the proportion of employees in the indicated industry to the total number of all employees reported in Canada on the date under review

tories; 976 workers were taken on by the 762 firms making returns, who had 30,147 on their staffs. This increase was smaller than that registered at the beginning of February, 1931, when employment was in greater volume. The gains in Ontario were most extensive.

*Musical Instruments.*—There was a further curtailment in employment in musical instrument works, 34 of which reduced their pay-rolls from 1,627 persons on January 1 to 1,583 on February 1. Larger contractions were

<sup>1</sup>The "Relative Weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

noted on February 1, 1931, and the index number then was lower.

*Plant Products, Edible.*—There was a considerable decline in the vegetable food group, according to the 394 reporting establishments, which employed 25,937 workers compared with 26,995 in the preceding month. Canneries showed further seasonal losses, and flour and cereal, sugar and syrup and chocolate and confectionery factories also released employees. Little general change had been reported on February 1 last year, and the index was then a few points higher.

*Pulp and Paper.*—Contractions were indicated in pulp and paper mills, while paper product factories were rather busier. The index was lower than on February 1, 1931, when losses had also been recorded. Data were received from 551 employers of 53,522 workers, as against 54,216 at the beginning of January. Most of the reduction took place in Ontario, while improvement was reported in Quebec.

*Rubber Products.*—A considerable increase was shown in rubber factories, 44 of which added 1,103 employees to their payrolls, bringing them to 11,579 at the beginning of February. Employment was not so brisk as on the same date in 1931, although the tendency was then downward.

*Textile Products.*—The advance in employment in the co-operating factories was slightly larger than on February 1, 1931, but general activity then was rather greater than on the date under review. Silk, woollen, cotton, headwear, garment and personal furnishing and hosiery and knitting establishments registered important increases in personnel. The working force of the 734 co-operating firms aggregated 80,537 persons, as compared with 75,678 in their last report. Ontario and Quebec showed noteworthy improvement.

*Tobacco, Distilled and Malt Liquors.*—Very little change, on the whole, was recorded in this division, in which employment was in rather greater volume than on February 1 of a year ago. Returns were tabulated from 152 manufacturers with 15,446 employees. Tobacco works reported improvement, but this was offset by losses in the beverage group.

*Chemicals and Allied Products.*—Statements were compiled from 143 firms in this group, whose staffs aggregated 8,162, as compared with 8,192 at the beginning of January. Employment was not quite so active as in the winter of 1931.

*Clay, Glass and Stone Products.*—There was a further seasonal decrease in this group on

the date under review, according to 172 manufacturers, whose labour forces included 8,079 workers, or 112 fewer than in the preceding month. Employment was slacker than on February 1, 1931, although larger losses were then indicated.

*Electric Current.*—Continued curtailment was reported in electric current plants at the beginning of February, when the 90 co-operating manufacturers reported 14,129 employees, compared with 14,490 at the beginning of January. Activity was less than on February 1 last year, when slightly greater declines had taken place.

*Electrical Appliances.*—Employment in electrical appliance works showed a recession, and the situation was not so good as on the same date a year ago. Data were received from 84 establishments, employing 13,876 operatives, as against 14,037 on January 1, 1932.

*Iron and Steel Products.*—There were large increases in employment in iron and steel factories, the recovery being most noteworthy in automobiles and rolling mills, while the agricultural implement, shipbuilding, heating appliance and some other groups were also busier. On the other hand, general plant machinery factories were slacker. The improvement in Ontario was most pronounced, but the trend was generally upward, except in the Prairie Provinces. Statistics were tabulated from 763 firms, whose staffs stood at 95,564, compared with 92,101 on January 1. The index was lower than on the corresponding date last year, when greater advances had been indicated.

*Non-ferrous Metal Products.*—Lead, tin, zinc, copper and precious metal works recorded heightened activity, but the smelting and refining group was slacker. The general gain was much less than on February 1, 1931, when the index was many points higher. The working forces of the 121 co-operating manufacturers included 14,394 employees, or 63 more than at the beginning of January. The increase took place largely in Ontario and the Maritime Provinces while in Quebec reductions were noted.

*Mineral Products.*—Eighty-six establishments in the mineral products group reported 11,251 workers, as compared with 11,428 in the preceding month. Activity on the whole, was less than in the winter of 1931, although greater curtailment had then been indicated.

### Logging

Very little general change was recorded in logging, in which employment was slacker

than in most years of the record. Statements were received from 231 operators employing 18,673 workers, as against 18,623 on January 1. The trend of employment was downward in the Maritime Provinces and British Columbia, while elsewhere movement was favourable.

### Mining

Coal and other non-metallic minerals afforded decreased employment, and metallic ore mines were also rather slacker. On the whole, there was a decline of 1,190 persons in the forces of the operators furnishing returns, who numbered 220. Their staffs aggregated 46,052 employees, of whom 25,932 were engaged in the mining of coal, 15,727 in metallic ores and 4,393 in non-metallic minerals, other than coal. A slightly greater loss had been indicated on February 1, 1931, when the index was several points higher than on the date under review.

### Communications

The working force of the companies and branches reporting stood at 25,257 persons, compared with 25,463 in the preceding month, most of the reduction taking place on telephones. The number employed was not so great as on the same date in 1931, although the losses then recorded had been very much larger.

### Transportation

*Street Railways and Cartage.*—There was a downward trend in employment in this division on February 1, and the index was lower than in the winter of 1931. The 165 co-operating employers had 22,723 persons on their payrolls, or 285 less than in the preceding month. Quebec and Ontario registered most of the decline.

*Steam Railway.*—Seasonal contractions involving a smaller number of workers than on February 1 a year ago, were noted in steam railway operation, in which employment was at a lower level than on the same date of last year. Returns were compiled from 100 companies and branches in this group, whose staffs aggregated 63,632 persons, as compared with 65,898 on January 1. There were large reductions in the Prairie Provinces and Ontario.

*Shipping and Stevedoring.*—Employment in water transportation showed a slight falling-off; 86 employers released 62 workers from their payrolls, bringing them to 11,791 on the date under review.

### Construction and Maintenance

*Building.*—Employment in building construction decreased on February 1, as is cus-

tomary on that date. The index was lower than at the beginning of February of 1931. Statistics were received from 664 contractors, with 23,292 persons in their employ, as against 25,525 on January 1. The greatest contractions were in Quebec and Ontario.

*Highway.*—The number of persons employed by 323 firms in the highway construction and maintenance group was 55,603, or 12,944 fewer than in the preceding month. The losses in the Maritime Provinces and Ontario were especially pronounced. Employment in this group was in greater volume than on February 1 of any previous year on record, due to the public unemployment relief works undertaken throughout the Dominion.

*Railway.*—Considerable curtailment was noted in railway construction and maintenance; improvement had been recorded on the same date in 1931, when the index was higher. Statements were tabulated from 35 employers in this group, with 23,660 persons on their payrolls, as compared with 25,032 in the last report. Decreases in personnel were registered in the Maritime Provinces, Quebec and Ontario; in British Columbia practically no general change was reported, while there were increases in the Prairie Provinces.

### Services

Employment in services was not so active as in the preceding month; 280 establishments had 20,672 employees, or 492 lower than on January 1. The index was lower than on February 1 of last year, when a smaller decline had been noted in this group.

### Trade

Following the usual activity at the Christmas and holiday season, there was a considerable falling-off in the number employed in trade on February 1. The losses were on a slightly smaller scale than those noted on the same date in 1931, but the index of employment was then higher than on the date under review. The 839 trading establishments furnishing data reduced their payrolls from 90,026 employees on January 1 to 83,907 at the beginning of February. There were general decreases, mainly in retail stores, but wholesalers were also slacker.

Index number of employment by tables, economic areas, leading cities and industries are given in the accompanying tables. The columns headed "Relative Weight" show the proportion that the number of employees reported in the indicated area, or industry, is of the total number of employees reported in Canada by the firms making returns on February 1, 1932.

(2) Unemployment in Trade Unions at the Close of January, 1932

Unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons who are engaged in work outside their own trades or who are idle due to illness are not considered as unemployed. Unions involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

ness in the building and construction trades of the province. In Manitoba and Alberta also employment declines on a moderate scale were noted, while recessions of lesser importance occurred among Ontario, Nova Scotia and British Columbia unions. On the other hand, Saskatchewan unions reported a slightly greater volume of activity than in December, and in Quebec the employment balance was favourable though the gain was nominal only, quietness in the building trades in a large way offsetting the improvement reported by garment workers. Saskatchewan unions alone

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

The situation for local trade unions at the close of January showed but slight change from December, 1931, conditions, the employment tendency however being in an unfavourable direction. This was manifest by the returns tabulated for January from a total of 1,849 labour organizations, comprising a membership of 187,891 persons, 41,330 of whom were without employment on the last day of the month, a percentage of 22.0, in comparison with 21.1 per cent of inactivity in December. Substantial increases in idleness were reported from January, 1931, when 16.0 per cent of unemployment was indicated. Curtailment of activity of noteworthy proportions from December were reported by New Brunswick unions, chiefly attributable to slack-

ness in the building and construction trades of the province. In Manitoba and Alberta also employment declines on a moderate scale were noted, while recessions of lesser importance occurred among Ontario, Nova Scotia and British Columbia unions. On the other hand, Saskatchewan unions reported a slightly greater volume of activity than in December, and in Quebec the employment balance was favourable though the gain was nominal only, quietness in the building trades in a large way offsetting the improvement reported by garment workers. Saskatchewan unions alone

reported employment advances from January, 1931, which were, however, but fractional. Decided curtailment of activity was noted in Quebec from January a year ago, manufacturing, notably the garment trades, and building and construction, being the chief factors in this adverse situation and reductions on a more moderate scale, though, noteworthy, were reported from the remaining provinces.

A separate compilation is made each month of unemployment in the largest city in each province, with the exception of Prince Edward Island. Of these Saint John unions reported a large drop in the volume of work available from December, and declines of much lesser magnitude occurred among Winnipeg, Halifax, Toronto and Vancouver unions.

On the other hand, Montreal, Regina and Edmonton unions reported somewhat heightened activity from December. Montreal unions suffered severe losses in employment from January, 1931, and Vancouver, Saint John, Toronto and Edmonton unions also reflected distinctly unfavourable conditions. In Winnipeg and Halifax the situation was also adverse, the contractions being of more moderate proportions. Regina unions alone reported a higher employment level from January a year ago, the improvement recorded being substantial.

The chart accompanying this article traces the curve of unemployment from January, 1926, to date, the projection in January was slightly upward from that of December, 1931, an evidence of a somewhat greater unemploy-

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

ment volume, and at the end of the month the curve rested at a point considerably above that indicated in January, 1931, when the situation was more favourable than in the month reviewed.

Manufacturing, particularly the garment trades, showed increased activity during January from the previous month, the percentage for the group, as a whole, standing at 21.4 in contrast with a percentage of 23.8 in December. The January percentage was based on the returns received from a total of 492 unions, with a membership aggregate of 51,874 persons, 11,118 of whom were without employment on the last day of the month. Garment workers, though continuing to work at greatly reduced time, were afforded much better employment than in December, and improvement was noted also, by metal polishers, hat and cap workers, pulp and paper makers, cigar makers, and bakers and confectioners. On the other hand, glass, wood and fur workers, and general labourers reported pronounced recessions of activity, with more moderate reductions among textile and carpet workers; while the situation for iron and steel workers, and printing tradesmen remained substantially the same as in the previous month. A large falling off in activity was manifest in the manufacturing industries from January, 1931, when 12.0 per cent of the members reported were idle, unemployment in the garment trades being the most important feature in this adverse situation. The contractions for these tradesmen, while heavy, were augmented by noteworthy increases in idleness among iron and steel, wood, fur, hat and cap workers, general labourers, metal polishers, and printing tradesmen. Employment for pulp and paper makers, on the contrary, showed marked improvement from January a year ago and noteworthy employment expansion was registered by glass, and textile and carpet workers.

Coal miners with 52 reporting unions in January, combining a membership of 19,577 persons, indicated 12.3 per cent of idleness at the end of the month contrasted with 10.0 per cent in December and with 5.5 per cent in January, 1931. Nova Scotia, Alberta and British Columbia unions all participated in the downward employment movement shown, both from December and January, 1931, Alberta unions in the former comparison reporting the most appreciable decline, while in the latter unemployment for Nova Scotia miners accounted largely for the change. Short time continued prevalent, however, in both the eastern and western coal fields.

The building and construction trades were quieter during January than in the previous month, and remained quite slack on the whole, the percentage of unemployment standing at 63.8 contrasted with 58.1 per cent of idleness in December. For January reports were received from 260 unions of building tradesmen with 25,906 members, 16,530 of whom were without work on the last day of the month. Tile layers and lathers reported a higher level of activity than in December, and minor gains were indicated by hod carriers and building labourers. In the remaining trades, however, less favourable conditions prevailed, carpenters and joiners particularly showing substantial employment curtailment, which was chiefly confined to the Provinces of Quebec and Ontario, the recessions in the other trades being on a somewhat smaller scale. Compared with the situation in the building trades during January, 1931, when 46.2 per cent of the members reported were idle, hod carriers and building labourers alone reported advances in employment during the month reviewed, while in the remaining trades the situation was decidedly unfavourable.

Activity in the transportation industries was slightly curtailed during January from the preceding month, according to the reports tabulated from 787 unions, covering a membership of 64,764 persons. Of these 8,537 or a percentage of 13.2 were idle on the last day of the month in contrast with 12.3 per cent in December. This employment decrease from December was totally accounted for by slackness among steam railway employees whose returns comprised over 81 per cent of the entire group membership reporting. Navigation workers were afforded a greater volume of employment than in December, and slight improvement was manifest by teamsters and chauffeurs, and street and electric railway employees. Steam railway employees and navigation workers both contributed a share to the unemployment increase shown from January, 1931, when 11.0 per cent of idleness was recorded in the transportation industries as a whole, while teamsters and chauffeurs, and street and electric railway employees reported fractional gains in activity.

The 4 unions of retail clerks making returns in January with a total of 1,212 members, indicated 4.5 per cent of idleness at the close of the month, contrasted with percentages of 0.3 in December and 3.4 in January, 1931.

Civic employees with 72 unions combining a membership of 8,410 persons, in January reported 174 out of work, a percentage of 2.1 contrasted with 2.3 per cent in December. No variation, however, was apparent from January, 1931, when the percentage of unemployment also stood at 2.1.

The situation in the miscellaneous group of trades changed but slightly during January from the previous month, the tendency, however, being unfavourable. For January reports were tabulated from 133 unions in the miscellaneous group of trades, with 5,807 members, 19.5 per cent of whom were idle on the last day of the month, as compared with 19.1 per cent in December. Unclassified workers reported contractions of activity of over 3 per cent from December, and barbers, and theatre and stage employees declines of lesser magnitude. Nominally improved conditions, however, were reported by hotel and restaurant employees, and stationary engineers and firemen. A lower level of activity was indicated in the miscellaneous group of trades from January, 1931, when 18.3 per cent of the members reported were idle, most of the decline occurring among stationary engineers and firemen, with minor contractions for theatre and stage employees and barbers. Unclassified workers and hotel and restaurant employees, however, were afforded a much better employment volume.

Less work was available to fishermen during January than in either the previous month or January, 1931, the change from December, however, being slight. For the month reviewed returns were tabulated from 2 unions of these workers, with 1,062 members, 230 or 21.7 per cent of whom were idle on the last day of the month, compared with percentages of 20.2 in December, 1931, and 11.0 in January, 1931.

Reports from 4 unions of lumber workers and loggers during January with a total of 775 members, indicated 24.0 per cent of unemployment, in contrast with 20.6 per cent in December. Employment was, however, in greater prevalence than in January, 1931, when 30.6 per cent of the members reported were idle.

Table I shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1931 inclusive, and also the percentage of unemployment by provinces for January of each year from 1919 to 1929 inclusive, and for each month from January, 1930, to date. Table II summarizes the returns in the various groups of industries for the same months as in Table I.

### (3) Employment Office Reports for January, 1932

The volume of business transacted by the offices of the Employment Service of Canada during the month of January, 1932, as indicated by average daily placements effected, showed a decline of over 10 per cent from the preceding month and of nearly 41 per cent when a comparison was made with the records of January a year ago. All groups, except logging and farming, showed losses in the first comparison, the largest decline being in construction and maintenance. This group was responsible also for the marked decrease from January, 1931, although all other industries,

the curve of vacancies and of placements in relation to applications registered a sharp decline during the first half of January, but rose over four points during the latter half of the month. At the close of the period, however, each curve was at a level considerably below that recorded at the end of January a year ago. The ratio of vacancies to each 100 applications was 52.6 and 56.9 during the first and the second half of January, 1932, in comparison with ratios of 61.7 and 66.2 during the same periods of 1931. The ratios of placements to each 100 applications during the

#### POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications ————— Vacancies - - - - - Placements o-o-o-o-o

except farming, also recorded fewer placements effected than in January a year ago. Reduction of placements under highway construction was due to the camps having obtained their full quota of men, while the gain in farming was mainly attributable to additional persons sent out under the Unemployment and Farm Relief Act.

The accompanying chart shows the trend of employment since January, 1930, as represented by the ratio of vacancies notified and of placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, computations being made semi-monthly. It will be noted that

periods under review were 51.0 and 55.6 as compared with 60.4 and 64.7 during the corresponding month of 1931.

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during January, 1932, was 1,262, as compared with 1,418 during the preceding month and with 2,123 in January a year ago.

The average number of applications for employment received daily by the offices during the month under review was 2,311 as compared with 2,073 in December and with 3,310 during January last year.

\*13 placements effected by offices since closed.

The average number of placements made daily by the offices of the Service during January, 1932, was 1,229, of which 483 were in regular employment and 746 in work of one week's duration or less, as compared with a total daily average of 1,375 during the preceding month. Placements in January a year ago averaged 2,076 daily, consisting of 536 in regular and 1,540 in casual employment.

During the month of January, 1932, the offices of the Service referred 32,206 persons to vacancies and effected a total of 30,721 placements. Of these, the placements in regular employment were 12,072, of which 9,124 were of men and 2,948 of women, while placements in casual work totalled 18,649. The number of vacancies reported by employers was 25,654 for men and 5,884 for women, a total of 31,538, while applications for work numbered 57,755, of which 46,420 were from men and 11,335 from women.

The following table gives the placements effected by the offices of the Employment Service of Canada, each year, from January, 1922, to date:—

Year	Placements		
	Regular	Casual	Totals
1922.....	297,827	95,695	393,522
1923.....	347,165	115,387	462,552

1932 (1 month).....	12,072	18,649	30,721

#### NOVA SCOTIA

There was a decline of over 32 per cent in the number of positions offered through employment offices in Nova Scotia during January when compared with the preceding month, but a gain of 1 per cent in comparison with the corresponding month of last year. Placements declined nearly 32 per cent from December, but were nearly 5 per cent in excess of January, 1931. Increased placements in construction and maintenance and transportation were responsible for the gain over January a year ago, offset in part by declines in all other groups. Of the latter, the only appreciable reduction in placements was in the services' division. Industrial divisions in which most of the placements were made during the month were: transportation, 30; construction and maintenance, 173; trade, 33; and services, 314, of which 224 were of household workers. During the month 152 men and 81 women were placed in regular employment.

#### NEW BRUNSWICK

The demand for workers, as indicated by orders received at employment offices in New Brunswick during January, was nearly 17 per cent less than in the preceding month and nearly 38 per cent below the corresponding month of last year. Placements also were over 16 per cent less than in December and over 37 per cent below January, 1931. The decline in placements from January of last year was almost entirely due to reduced placements in construction and maintenance and services, as the changes in other groups were nominal only. During the month, 166 placements were made under construction and maintenance, and 392 in services. Of the latter, 305 were of household workers. Regular employment was found for 177 men and 49 women during the month.

#### QUEBEC

During January, employment offices in the province of Quebec received orders for about 19 per cent less workers than both in the preceding month and in the corresponding month last year. Placements, however, were about 16 per cent less than in December and nearly 9 per cent below January, 1931. The adverse change in placements, when compared with January last year, was due to reductions under logging and construction and maintenance. The declines in these groups, however, were largely offset by increased placements in services, manufacturing and trade. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 74; construction and maintenance, 69; trade, 47; and services, 755, of which 642 were of household workers. There were 220 men and 613 women placed in regular employment during the month.

#### ONTARIO

Orders received at Ontario offices during January called for about 16 per cent less workers than in the preceding month and about 49 per cent less than during the corresponding month last year. There were corresponding declines in placements under both comparisons. A very large decrease in the number of placements under construction and maintenance, with smaller declines in services, trade, manufacturing and transportation accounted for the substantial decline from January a year ago. Last year placements on relief work were very heavy during January, whereas this winter, work of this kind was provided two or three months earlier. Placements by industrial divisions included: manu-

facturing, 531; logging, 524; farming, 241; transportation, 43; construction and maintenance, 12,303; trade, 255; and services, 2,715, of which 1,693 were of household workers. There were 3,155 men and 1,130 women placed in regular employment during the month.

#### MANITOBA

Opportunities for employment, as indicated by orders received at employment offices in Manitoba during January, were nearly 7 per cent less than in the preceding month and nearly 47 per cent below the corresponding month last year. There was a decline of nearly 3 per cent in placements when compared with December and of over 44 per cent in comparison with January a year ago. As in Ontario, largely reduced placements on relief work, due to the provision of this employment earlier in the winter this year than last, accounted for the decline in placements from January, 1931. Declines were also recorded in services and trade. These losses, however, were partly offset by gains in farming, logging and manufacturing. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 73; logging, 336; farming, 599; construction and maintenance, 2,269; trade, 56; and services, 824, of which 668 were of household workers. During the month 2,091 men and 341 women were placed in regular employment.

#### SASKATCHEWAN

There was a decline of over 25 per cent in the number of positions offered through employment offices in Saskatchewan during January, when compared with the preceding month, and of nearly 32 per cent when compared with the corresponding month of last year. Placements also were nearly 30 per cent lower than in December and nearly 41 per cent less than in January, 1931. Nearly all the reduction in placements from January of last year was due to relief work in highway construction being provided earlier during the present winter than last year. There was, however, a large decline in bush work, but this was offset by increased farm placements. Transportation and trade showed small gains, but in services and manufacturing fewer placements were recorded. Placements by industrial divisions included: logging, 49; farming, 598; transportation, 46; construction and maintenance, 491; trade, 68; and services, 605, of which 445 were of household workers. Regular placements numbered 851 of men and 342 of women.

#### ALBERTA

Employment opportunities, as indicated by orders received at employment offices in Alberta during January, were nearly 8 per cent better than in the preceding month, but over 25 per cent less favourable than during the corresponding month of last year. There was a gain of over 8 per cent in placements when compared with December, but a decline of 25 per cent in comparison with January, 1931. The decline in placements from January of last year was mainly attributable to fewer workers being placed on relief work, this employment being provided in earlier months this winter than last. There were also fewer placements in logging, mining and manufacturing, but these declines were largely offset by gains in services and farming. Placements by industrial groups included: logging, 139; farming, 194; construction and maintenance, 2,276; trade, 45; and services, 714, of which 352 were of household workers. There were 1,221 men and 238 women placed in regular employment during the month.

#### BRITISH COLUMBIA

During January, positions offered through employment offices in British Columbia were about 22 per cent less than in the preceding month and about 31 per cent below the corresponding month of last year. Similar reductions were recorded in placements under both comparisons. Fewer placements were made in all industrial divisions than during January, 1931. The only declines of importance, however, were in construction and maintenance, logging, and services, and accounted for over 90 per cent of the reduction for the province as a whole. Industrial divisions in which most of the placements were made during the month were: manufacturing, 43; farming, 28; construction and maintenance, 1,652; trade 30; and services, 516, of which 311 were of household workers. Regular employment was found for 1,257 men and 154 women.

#### Movement of Labour

During the month of January, 1932, the offices of the Employment Service of Canada effected 12,072 placements in regular employment, 3,726 of which were of persons for whom the employment found was outside the immediate vicinity of the offices at which they were registered. Of the latter 492 were granted the Employment Service reduced transportation rate, 295 going to points within the same province as the despatching office and 197 to other provinces. The reduced

transportation rate, which is 2.7 cents per mile with a minimum fare of \$4, is granted by the railway companies to bona fide applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

Ontario offices issued 173 reduced transportation rate certificates during January, 170 of which were to centres within the province. The majority of these were granted to bushmen, 142 proceeding to employment in the Fort William, Port Arthur, Sudbury, Timmins and Fort Frances zones on certificates received at offices in the first three cities named. From Sudbury in addition, 4 highway rockmen were transferred to Kingston and two highway construction teamsters within its own zone, while Port Arthur despatched one shoemaker to North Bay and 3 miners to employment in the territory covered by the Port Arthur office. Destined to the Fort William zone also were 2 fishermen travelling on certificates secured at that zone office. The movement from North Bay comprised the transfer of 9 highway construction station men to Kingston, one hotel chef to Timmins and 2 highway construction workers within the North Bay zone. The 4 remaining provincial transfers were of miners conveyed from Cobalt to Sault Ste. Marie. Of the workers going outside the province one, a silk finisher, and one a card gilder, travelled to Montreal on certificates issued at Toronto, while to Winnipeg one foreman was conveyed from Niagara Falls.

All transfers at the reduced rate in Manitoba during January were effected by the Winnipeg office and numbered 216, 22 of which were provincial and 194 interprovincial. Of the latter, 188 were to the Port Arthur zone, and included 184 bushmen, 2 farm hands, one hotel general and one truck driver and mechanic. The 6 remaining transfers outside the province were of farm labour for Saskatchewan rural areas. Provincially the Winnipeg office despatched one cook and one

waitress to Dauphin, one hotel cook and one farm housekeeper to Brandon, and 13 farm hands, one farm domestic and 4 bushmen to employment within the Winnipeg zone.

The movement of labour in Saskatchewan during January was entirely to provincial points and comprised the transfer of 19 workers. From Saskatoon 3 bushmen, one farm hand and one farm housekeeper travelled to North Battleford, one bushman and one lumber worker to Prince Albert, one farm hand to Regina and 4 farm hands within the Saskatoon zone. To a point within its own zone Regina despatched 4 school teachers. In addition Weyburn received one hospital attendant from North Battleford, Swift Current one farm hand from Prince Albert, and Moose Jaw one farm housekeeper from Weyburn.

Workers benefiting by the Employment Service reduced transportation rate in Alberta during January were 82 in number, all of whom went to employment within the province. The Edmonton office was responsible for the transfer of 80 persons to centres within its own zone, including 39 bushworkers, 17 farm hands, one farm domestic, 14 mine workers, 4 lumber workers, one highway construction foreman, 3 labourers, and one hotel waitress. The balance of this provincial movement originated at Calgary, from which centre one farm hand was transported to Medicine Hat and one farm hand to employment within the Calgary zone.

In British Columbia two persons took advantage of the Employment Service reduced transportation rate in January. These, a carpenter and a farm hand, secured certificates at Vancouver for transportation to Penticton.

Of the 492 persons who were carried at the Employment Service reduced transportation rate during January 310, travelled by the Canadian National Railways, 174 by the Canadian Pacific Railway, 5 by the Témiskaming and Northern Ontario Railway and 3 by the Northern Alberta Railway.

#### (4) Building Permits issued in Canada during January, 1932

There was a seasonal decline in the value of the building permits issued by 61 cities during January as compared with the preceding month, and the total was also lower than in January, 1931; the co-operating municipalities reported permits for buildings estimated to cost \$2,761,929, compared with \$7,895,106 in December, 1931, and \$8,401,456 in January of last year. There was, therefore, a reduction, of 65.0 per cent in the first and of 67.1 per cent in the second comparison.

Some 50 cities furnished detailed statements, showing that they had granted over 300 permits for dwellings valued at about \$1,200,000, and nearly 800 permits for other buildings estimated to cost approximately \$1,300,000, while an engineering project, valued at \$45,654, was reported in Brantford. In December, authority was granted for the erection of some 400 dwellings and 1,800 other buildings, estimated to cost approximately \$4,000,000 and \$3,000,000 respectively.

Nova Scotia, New Brunswick, Saskatchewan, Alberta and British Columbia reported increases in the value of the building authorized during January as compared with December, 1931, the gain of \$87,343 or 97.8 per cent, in Alberta and of \$95,603, or 34.1 per cent, in British Columbia being most noteworthy. Of the declines elsewhere recorded, that of \$2,813,551, or 72.8 per cent., in Ontario was greatest.

As compared with January, 1931, there were increases of 55.3 per cent and 4.3 per cent in Nova Scotia and Alberta, respectively. Reductions were reported in the remaining provinces, that of \$2,942,421 or 73.6 per cent in Ontario being most pronounced.

In Montreal and Toronto, there were decreases in the value of the building permits granted as compared with both the preceding month and the same month of last year, while in Winnipeg and Vancouver, the January total was higher than in December, but lower than in January, 1931. The following cities reported increases in both comparisons—Sydney, Belleville, Port Arthur, St. Thomas and Lethbridge.

*Record for January in the Years 1920-1932.*—The following table gives the value of the building authorized by 61 cities during January of each year since 1920. Index numbers of wholesale prices of building materials in January of the same years are also given (1926 = 100).

Year	Value of permits issued in January	Indexes of value of permits issued in January (1926=100)	Indexes of wholesale prices of building materials in January (1926 average = 100)
	\$		
1932.....	2,761,929	58.5	79.5
1931.....	8,401,456	178.0	84.1
1930.....	7,217,397	152.9	97.3
1929.....	8,416,880	178.3	93.0
1928.....	7,716,587	163.5	95.2
1927.....	5,676,537	120.3	96.3
1926.....	4,719,534	100.0	102.3
1925.....	5,447,270	115.4	101.9
1924.....	4,460,579	94.5	112.4
1923.....	4,139,498	87.7	109.8
1922.....	3,326,537	70.5	109.3
1921.....	2,593,564	53.0	143.0
1920.....	4,017,024	85.1	134.5

The 1932 figure for January was lower than in most years of this record, but it should also be noted that the wholesale costs of building materials were lower in January than in the winter of any other year since 1920.

The accompanying table gives the value of the building permits issued by 61 cities in

January, 1932, and December and January, 1931. The 35 cities for which statistics are available since 1910 are indicated by asterisks.

1 Report not received.

## EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

**D**ETAILED reports and tables showing the employment conditions in Great Britain and Northern Ireland are given in the *British Ministry of Labour Gazette* from month to month, a monthly summary of this information also being published. This summary showing the employment situation during January, is reproduced below. The following report on unemployment conditions in the United States is based on the statistics published by the United States Department of Labour, showing the recent trend of employment throughout the country.

### Great Britain

The increase in unemployment which normally occurs after Christmas was experienced in January, but a decline in employment also occurred in a number of industries not directly affected by the Christmas activity.

Employment declined in building and contracting and in brick, tile and pipe manufacture, in coal mining, in iron and steel and metal goods manufacture, in general and electrical engineering, in the cotton, wool, hosiery and leather industries, in tailoring and dress-making, in the woodworking, printing, paper and distributive trades, and in road transport and shipping services. On the other hand there was a reduction in the numbers recorded as unemployed in the pottery, tinplate, boot and shoe, and hat and cap industries.

The decline in employment was experienced in all divisions of the country, the heaviest decline occurring in Wales and the South of England. Employment was very slack in the latter area and very bad in all other areas, though in the North-Western Division and in Northern Ireland it was substantially better than at the corresponding time last year.

Among the workpeople, numbering approximately 12,770,000, insured against unemployment in Great Britain and Northern Ireland, and working in practically every industry except agriculture and private domestic service, the percentage unemployed at January 25, 1932 (including those temporarily stopped as well as those wholly unemployed), was 22·4, as compared with 20·9 at December 21, 1931, and with 21·5 at January 26, 1931. The percentage wholly unemployed at January 25, 1932, was 18·4, as compared with 17·7 at December 21, 1931, while the percentage temporarily stopped was 4·0, as compared with 3·2. For males alone, the percentage at January 25, 1932, was 25·1, and for females 15·4; at

December 21, 1931, the corresponding percentages were 23·2 and 15·0.

At January 25, 1932, the number of persons on the Registers of Employment Exchanges in Great Britain was 2,131,298 wholly unemployed, 496,408 temporarily stopped, and 100,705 normally in casual employment, making a total of 2,728,411. This was 218,490 more than a month before, and 135,761 more than a year before. The total included 2,152,008 men, 76,510 boys, 440,927 women and 58,966 girls.

The 2,131,298 wholly unemployed included approximately 964,741 insured persons with claims for insurance benefits (consisting of those who (a) had paid at least 30 contributions during the preceding two years, (b) had received less than 156 days' benefit in their current benefit years, and (c) if 156 days' benefit had become payable in a previous benefit year ending on or after November 12, 1931, had paid at least 10 contributions since the 156th day of benefit); 834,256 insured persons with applications for transitional payments; 201,871 insured persons not in receipt of insurance benefit or transitional payments, and 130,430 uninsured persons.

In Great Britain and Northern Ireland, the total number of persons on the Registers of Employment Exchanges at January 25, 1932, was 2,793,676.

### United States

The Bureau of Labor Statistics of the U.S. Department of Labor reports the changes in employment and pay-roll totals in January, 1932, as compared with December, 1931, based on returns made by 49,251 establishments in 15 major industrial groups, having in January 4,362,503 employees, whose combined earnings in one week were \$93,573,892. The combined totals of these 15 groups show a decrease of 3·9 per cent in employment and a decrease of 7·5 per cent in pay-roll totals.

Fourteen of these industrial groups reported losses over the month interval in both employment and earnings. In employment the decreases ranged from 0·1 per cent in the telephone and telegraph group to 20·6 per cent in the retail trade group. In pay-roll totals the losses ranged from 1·3 per cent in laundries to 21·6 per cent in anthracite mining. The remaining group, hotels, reported an increase in employment of 0·1 per cent and a decrease in earnings of 2·0 per cent.

In a statement issued on February 19 in its official publication, the *Monthly Survey of*

*Business*, the American Federation of Labor presents the following summary of unemployment conditions in the United States:—

"Our own figures show that about 8,300,000 persons were out of work at the first of January; counting their families and those suffering from part-time work and low wages, we estimate that well over 40,000,000 American citizens are living below minimum standards for health to-day. Some 3,000,000 families (12,000,000 persons) are in immediate need of

relief. Only 1 to 1.5 million families are receiving help from either public or private agencies (estimate of Family Welfare Association) and the relief given averages only \$4 to \$5 a week for a family of five—not even enough to buy adequate food. Welfare agencies are overwhelmed and admit that adequate relief is totally impossible. The majority of the unemployed are being supported by relatives, friends, neighbours, dragging down the standards of the poor."

## FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding the contracts executed by various departments of the Government of Canada which include among their provisions fair wages conditions for the protection of the labour to be employed.

Reference was made in the *LABOUR GAZETTE*, June, 1930, page 652, to the Fair Wages and Eight-Hour Day Act of Parliament which was adopted on May 30, 1930. The text of this measure appeared in the April, 1930, issue page 383. This Act provides as follows:—

3. (1) Every contract made hereafter with the Government of Canada for construction, remodelling, repair or demolition of any work shall be subject to the following conditions respecting wages and hours:—

(a) All persons in the employ of the contractor, sub-contractor, or of any other person doing or contracting to do the whole or any part of the work contemplated by the contract shall be paid such wages as are generally accepted as current from time to time for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged; provided that wages shall in all cases be such as are fair and reasonable;

(b) The working hours of persons while so employed shall not exceed eight hours per day except in such special cases as the Governor in Council may otherwise provide, or except in cases of emergency, as may be approved by the Minister.

(2) The provisions of this section shall not apply to persons employed in the fabrication or manufacture of materials, supplies or equipment for use in the work contemplated where such fabrication or manufacture is carried on in any established plant or factory other than a plant or factory established for the purposes of the work contemplated.

The Act was put into effect at once as respects contracts for construction, remodelling, repair or demolition, both as to its provisions as to current and fair and reasonable rates of wages and as to the application of the eight-hour day.

With respect to contracts for other classes of work, the Fair Wages Policy of the Government of Canada, (which has been in effect since 1900 and was expressed in an Order in Council adopted June 7, 1922, and amended April 9, 1924) requires that they must contain either a fair wage schedule based on the current wages rates and working hours in the district, or a general fair wage clause requiring adherence to the current wage rates and working hours in the district for the different classes of labour employed or, in the absence of such standard conditions, fair and reasonable rates and hours. The conditions above-mentioned are referred to in the Order in Council as "A" conditions. Following is the text of the General Fair Wage Clause referred to:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade in the district where the work is carried on or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, unless for the protection of life and property or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of

three months immediately preceding the date thereof.

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may in the manner and subject to the provisions hereinabove set forth, decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any service performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

It is further provided in the Order in Council that "all contracts for the manufacture and supply to the Government of Canada of fittings for public buildings, harness, saddlery, clothing and other outfit for the military and naval forces, Royal Canadian Mounted Police, letter carriers, and other Government offices and employees, mail bags, letter boxes, and other postal stores, and any other articles and things hereafter designated by the Governor in Council" must contain provisions for the observance of the current wages rates and working hours in the district, or, in the absence of any such current standards, fair and reasonable rates and working hours. These conditions are referred to in the Order in Council as "B" conditions, and include the following Fair Wages Clause:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work such hours as those fixed by the custom of the trade as respects hours in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, except for the protection of life and property, or on due cause shown to

the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the Contractor until the Minister of Labour's decision has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

In both the "A" and "B" conditions of the Fair Wages Order in Council the Minister of Labour is empowered to determine questions which may arise as to what are the current or fair and reasonable wage rates and working hours. The contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and addresses of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government any time it may be expedient to the Minister to have the same inspected.

It is declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wage rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payment remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workman employed claim therefor may be filed with the Minister of the department with which the contract has been made and payment of such claim may be made by the latter. (Under the "A" conditions these rights extend to moneys payable for the use or hire of horses or teams.)

All workmen employed in the execution of the contract shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which

render it contrary to the public interest to enforce this provision.

Under the "A" conditions clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contract are specially instructed to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

The "B" conditions provide that the contractor's premises and the work being performed under contract shall be open for inspection at any reasonable time by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

During the past month statements were received in the Department of Labour showing that the following contracts were recently executed by the Government of Canada, those included under the "A" groups containing either fair wages schedules as shown below, or the General Fair Wages Clause above mentioned, and those coming under the "B" group containing the Fair Wages Clause specified in the "B" Conditions as given above:—

#### DEPARTMENT OF PUBLIC WORKS

##### *Contracts in Group "A" (Construction, etc.)*

Construction of repairs, renewals, and chipping, scraping and painting the hull and hoisting of Tug *J. G. Witherbee*, Government Champlain Dry Dock, Lauzon, P.Q. Name of contractors, George T. Davie & Sons, Lauzon, P.Q. Date of contract, February 23, 1932. Amount of contract, \$5,829. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Platers.....	\$0 60	8

## RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received in the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both the employers and the employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

### Construction: Buildings and Structures

TORONTO, ONTARIO.—CERTAIN CONTRACTORS AND THE WOOD, WIRE AND METAL LATHERS' INTERNATIONAL UNION, LOCAL No. 97.

This agreement was made to be in effect from May 1, 1929, to May 1, 1932, but was amended to change the wage rate December 11, 1931, the agreement as amended to continue in effect to the same date as originally provided.

Contractors will not advertise for help in the daily papers without first notifying the secretary or business agent of the union.

Hours: 8 per day, 5 days per week, a 40-hour week. No work on Saturday except after 5 p.m.

For works on any legal holidays, double time.

Wages on metal lath: from May 1, 1929, to April 30, 1930, \$1.32½; from May 1, 1930, wages to be \$1.37½ per hour. This clause was amended December 11, 1931, to provide for a rate of \$1.12½ from that date to May 1, 1932.

Wages on wood lath: from May 1, 1929, to April 30, 1930, 95 cents; from May 1, 1930, \$1 per hour "providing should a higher rate prevail outside of this union the pay be raised accordingly". Wages on second-class wood lathing 87½ cents. The wages on wood lath were not amended as in the case of metal lath.

Transportation and travelling time for all out-of-town work to be paid by contractors.

Foremen to be employed on each job where five lathers are employed, such foremen to hire, discharge and place men.

From November 15 to April 1, all buildings will be properly enclosed before lathing is started.

TORONTO, ONTARIO.—TORONTO SOCIETY OF DOMESTIC, SANITARY AND HEATING ENGINEERS AND THE UNITED ASSOCIATION OF PLUMBERS AND STEAMFITTERS, LOCAL No. 46.

Agreement to be in effect from February 2, 1932, to April 30, 1933, and from year to year thereafter unless either party gives notice sixty days before April 30 of any year.

Only union members to be employed if available. Any men employed in connection with sanitation or the city water system must have a city licence. Only union members and duly indentured apprentices will handle any tools of the trade.

Hours: 8 per day, 5 days per week, a 40-hour week. In case of night work or shift work 7 hours will be worked with pay for 8 hours.

Overtime: all overtime, time and one-half. For work on Saturdays, Sundays and holidays, double time. In finishing up a repair job on regular working days if it will not take more than one hour to finish, regular rate of wages will be paid. In case of certain emergency work on Saturday morning, the regular rate will be paid.

Wages for journeymen plumbers and steamfitters: \$1 per hour, except that when it can be established and confirmed by the Joint Conference Board that 75 per cent of the members of the local union are employed full time, the wage rate will be raised to \$1.10 per hour until the expiration of the agreement. (The wage rate provided for in the previous agreement was \$1.25.)

Apprentices will be employed in accordance with the Ontario Provincial Apprenticeship Act.

One junior mechanic on any job to each branch of the trade, except where there are more than five journeymen plumbers or five journeymen steamfitters employed when the following ratio will be allowed: two to six journeymen, three to eleven and four to sixteen journeymen.

Wages for 5th year junior mechanics 65 cents per hour which may be raised proportionately under the same conditions providing for a wage increase for journeymen noted above.

For work out of the city where workmen cannot return daily, fare and travelling time will be paid and for such work 8 hours may be worked on Saturday at the regular rate; foremen will have their board paid in addition. For work out of the city where workmen can return home daily, transportation outside the city limits of greater Toronto will be provided and travelling time be paid for.

A joint conference board will be formed consisting of five employers and five members of the local union who shall adjust trade disputes or grievances which cannot be settled between the parties. If this board is unable to settle any dispute or in case of violation of the agreement, no strike or lockout will occur until an officer of the General Office of the United Association has investigated the matter and rendered a decision.

**HAMILTON, ONTARIO AND DISTRICT.—THE CANADIAN CONSTRUCTION ASSOCIATION, HAMILTON BRANCH, AND THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS OF AMERICA, HAMILTON DISTRICT COUNCIL.**

Agreement to be in effect from December 1, 1931, to May 1, 1933.

Only local union members to be employed if available. Business agents may visit the jobs.

Hours: 8 per day, 4 on Saturdays, a 44-hour week. On shift work, the second and third shift will work 7 hours and be paid for 8 hours.

Overtime: time and one-half. Sundays and holidays, double time.

Wages for journeymen carpenters: 90 cents per hour. This rate may be changed by mutual agreement from September 1, 1932. (The rate previously in effect was \$1 per hour.)

One apprentice allowed for every four journeymen employed. The wages of apprentices will be determined by the apprentice council.

For work out of the city, extra fare and travelling time one way to be paid by employer.

In case of any dispute which cannot be settled between the parties, or in case of any violation of the agreement, the dispute will be referred to a conciliation board consisting of three members of each party, for a decision. No strike or lockout to take place until an International Officer of the union and the chairman of the Contractors' Association have investigated the matter and given a decision.

**HAMILTON, ONTARIO.—THE HAMILTON CONTRACTING PLASTERERS' ASSOCIATION, AND THE EMPLOYING PLASTERERS OF HAMILTON AND THE OPERATIVE PLASTERERS AND CEMENT FINISHERS INTERNATIONAL ASSOCIATION, LOCAL NO. 298.**

Agreement to be in effect from January 1, 1932, to April 30, 1933. Ninety days before expiration, a committee will be appointed by both parties to meet and decide on a renewal or a new agreement.

Any authorized agent of the union may visit the jobs and employers agree to honour all money orders placed on members or non-members by the union. Foremen must be union members.

Hours: 8 per day, 4 on Saturdays, a 44-hour week.

Overtime: from 6 p.m. to 10 p.m., time and one-half; after 10 p.m. and all work on legal holidays, double time.

Wages for journeymen plasterers: from January 1, 1932, to April 30, 1932, \$1.12½ per hour; from May 1, 1932, to April 30, 1933, \$1.

Any firm in business for four years and employing two plasterers will be allowed one apprentice; firms employing an average of eight plasterers will be allowed two apprentices. All apprentices must be 17 years and under and will be indentured for four years.

For work out of city limits, employers will pay carfare and travelling time one way.

A committee of three members of each party will constitute an arbitration board to whom all disputes will be referred and there will be no cessation of work while a dispute is before them.

**VANCOUVER, B.C.—GENERAL CONTRACTORS ASSOCIATION OF VANCOUVER AND THE BRICKLAYERS AND MASONS INTERNATIONAL UNION NO. 1, BRITISH COLUMBIA.**

Agreement (made following strike reported on page 287 of this issue) to be in effect from February 1, 1932, to March 31, 1933.

Hours: 8 per day, 5 days per week, a 40-hour week.

Wages for journeymen bricklayers and masons \$1.22½ per hour.

### Transportation and Public Utilities— Electricity and Gas

**WINNIPEG, MANITOBA.—WINNIPEG ELECTRIC COMPANY AND THE INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS, LOCALS NOS. 1037 AND 435.**

This agreement was reached following the application for a board under the Industrial Disputes Investigation Act, which application

was subsequently withdrawn and an agreement reached by direct negotiations following conciliation by the Chief Conciliation Officer of the Department of Labour, as reported in the *LABOUR GAZETTE*, February 1932, page 123.

Agreement to be in effect from February 1, 1932, to January 31, 1935.

In engaging new employees, members of the union will be given preference. No discrimination to be shown to any employee for being or not being a union member.

Hours: 8 per day, 4 on Saturdays, a 44-hour week.

Overtime: time and one-half to midnight; after midnight and all work on Sundays and holidays, double time. On shift work, overtime for first four hours time and one-half and double time thereafter. Any employee called out in case of emergency after 9 p.m. will be paid at least for four hours at the regular rate.

The following wage scale is in effect subject to the clauses quoted immediately below:

Wages per hour for linemen: foremen 98½ cents; troublemen and linemen on emergency truck and sub-foremen 94½ cents; linemen journeymen 92½ cents; linemen's apprentices from 63 cents in first year to 87 cents in fourth year; meter shop foremen 90½ cents; meter installers and meter repairers 85½ cents; helper apprentices from 40 cents in first year to 68½ cents in fourth year; cable splicers (when working in this capacity) 98 cents; linemen hired to do out of town work 92½ cents or 80½ cents with board; foremen hired to do out of town work 98½ cents or 86½ cents with board; lamp trimmers 73½ cents; station maintenance men (journeymen) 89 cents; helpers from 40 cents in the first year to 68½ cents in the fourth year.

"To men, the nature of whose employment is such that it will likely be continuous, providing employment from which they are not likely to be laid off from time to time, a 10 per cent reduction in wage rate effective February 1, 1932. In this class are men in the Meter Department.

"To men, the nature of whose employment is such that it is not continuous and is subject to lay off from time to time, 7 per cent effective February 1, 1932.

"The understanding being that at the first of February, 1933, one-half of this reduction in wage rate shall be restored for the year commencing February 1, 1933, and on February 1, 1934, the other one-half will be restored, *provided*, however, that if during January 1933 or January 1934 general conditions are such that in the opinion of the Company this restoration is not warranted, the company may notify the organization that such restoration will not be made; whereupon the wage scale for the ensuing year shall be determined by conference and mutual agreement or otherwise."

Except where journeymen linemen are not obtainable, the ratio of apprentices to journeymen shall not exceed one in four.

No man will be entitled to a journeyman's rating until he has had four or more years' experience in the branch of the trade in which his classification falls in the wage schedule. (This clause is not retroactive.) Apprentices will work only under the supervision of a journeyman except for the last six months of their apprenticeship.

For out of town work lasting a month or less, transportation and board to be paid if

they cannot return home daily, but if they can, transportation only will be paid by employer.

Certain conditions are made for work on high voltage wires.

Seniority with efficiency to be considered in all departments.

Any employee who believes himself unjustly dealt with or that any of the provisions of the agreement have been violated will make a statement to the Grievance Committee, who if they consider it justifiable will take the matter up with the proper authorities and endeavour to settle it.

#### WINNIPEG, MANITOBA.—WINNIPEG ELECTRIC COMPANY AND THEIR EMPLOYEES, MEMBERS OF THE GAS WORKERS' UNION OF WINNIPEG.

Agreement to be in effect from February 1, 1932 to January 31, 1933 and thereafter from month to month until either party gives thirty days notice of change.

Union officers will be granted leave of absence for the purpose of union business.

Hours: 8 per day (a 48-hour week) for men on the battery and steam boilers, and 9 hours (a 54-hour week) for yard men, labourers and other like employees.

Overtime: time and one half, except that employees working on Sundays, legal holidays, etc., when such time comes in their regular shift will not be paid overtime rates.

Wages per hour: heaters, producer operators and pusher operators 57½ cents; door lifter operators and quenching car operators 56 cents; handyman, pipe fitter and tinsmith 54 cents; boilermen 49½ cents; boiler washer 48½ cents; yard men and labour employed in coal cars and purifying house or any part of the gas works 40½ cents.

When vacancies occur, seniority will be considered with due regard to efficiency.

Employees covered by the agreement will have free transportation.

The company through its representatives will meet and confer with the representatives of the employees on all questions which may arise between the parties.

Secretary A. J. Morrison, of District 18, United Mine Workers of America, stated on his return from the recent Convention of the International union at Indianapolis, that the U.M.W. of A. is now definitely committed to the advocacy of unemployment insurance in both the United States and Canada.

A total of 21,392 persons became naturalized Canadian citizens during the fiscal year which ended March 31, 1931. Of these the largest individual national group was from Russia, with 4,069. Poles were second with 2,522. The third largest national group was comprised of Americans, of whom 2,339 were naturalized. Others were: Italians, 2,067; Austrians, 2,008; Serbians, 929; Germans, 743, and Norwegians, 669. Certificates issued numbered 10,897, covering the whole number of naturalizations and embracing the names of wives and minor children. During the year 27 certificates of naturalization were revoked.

## PRICES, RETAIL AND WHOLESALE, IN CANADA, FEBRUARY, 1932

### Cost of Living, Prices of Staple Articles and Index Numbers

**T**HE movement in prices during the month was again downward, both the weekly family budget in terms of retail prices and the Dominion Bureau of Statistics index number of wholesale prices being lower.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average prices in sixty-nine cities was lower at \$7.34 for February, as compared with \$7.68 for January; \$9.44 for February, 1931; \$11.83 for February, 1930; \$11.15 for February, 1929; \$10.61 for February, 1922; \$16.92 for June, 1920 (the peak); \$15.77 for February, 1920; and \$7.75 for February, 1914. The decline was due mainly to a substantial seasonal fall in the price of eggs, although the prices of pork, bacon, lard, milk, butter, cheese, beans and prunes were also lower. Including the cost of fuel and rent with that of foods the total budget averaged \$17.25 for February, as compared with \$17.59 for January; \$19.78 for February, 1931; \$22.12 for February, 1930; \$21.41 for February, 1929; \$21.07 for February, 1922; \$26.92 for July, 1920 (the peak); \$24.71 for February, 1920; and \$14.54 for February, 1914. Fuel and rent were practically unchanged.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was slightly lower at 69.2 for February as compared with 69.4 for January; 76.0 for February, 1931; 93.9 for February, 1930; 95.0 for February, 1929; 98.3 for February, 1922; 164.3 for May, 1920 (the peak); and 64.8 for February, 1914. One hundred and three prices quotations declined, fifty-five advanced and three hundred and forty-four were unchanged.

In the classification according to chief component materials six of the eight main groups were lower, one was higher and one was unchanged. The groups which declined were: the Animals and their Products group, because of lower quotations for steers, hogs, hides, fresh meats, milk and butter, which more than offset advances in the prices of calves, lambs, and smoked ham; the Fibres, Textiles and Textile Products group, mainly because of lower prices for raw silk; the Iron and its products group, due to declines in the prices of steel tank plates and automobile body plates; the Non-Ferrous Metals and their Products group, due mainly to reduced quotations for lead, silver, tin, zinc and copper; the Non-Metallic Minerals and their

Products group, because of lower prices for coal oil and sulphur; and the Chemicals and Allied Products group, because of lower quotations for sodium bichromate and certain other chemicals. The Vegetables and Vegetable Products group was slightly higher, increased prices for barley, flax, rye, wheat and flour more than offsetting lower prices for bran, shorts, raw rubber, gluten meal and potatoes. The Wood, Wood Products and Paper group was unchanged.

In the grouping according to purpose both consumers' goods and producers' goods were slightly lower, the former because of lower quotations for potatoes, turnips, fresh beets, poultry, butter and milk, which more than offset advances in the prices of flour, onions, smoked ham, eggs, and glass tumblers, and the latter because of lower prices for raw silk, bran, shorts, hides, beaver and mink skins, hogs, copper and tin, which more than offset higher prices for wheat, flax, barley, lambs and fir lumber.

In the grouping according to origin raw and partly manufactured goods were fractionally lower, due to declines in the prices of raw rubber, raw silk, potatoes, hogs, copper and tin, which more than offset higher prices for wheat, rye, barley, calves, lumber and eggs. Fully and chiefly manufactured goods also were lower, mainly because of decreased prices for bran, shorts, bacon, butter, cheese, canned salmon and dye stuffs. Canadian farm products and articles of forest origin were slightly higher, while articles of marine origin and articles of mineral origin declined.

### EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of February, of seventy-one staple foodstuffs, groceries, coal, wood, and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quantity for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city except milk and bread are the average of quotations reported to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of milk, bread and fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

(Continued on page 358)

**COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL, AND LIGHTING, AND RENT IN TERMS OF THE AVERAGE PRICES IN SIXTY-NINE CITIES IN CANADA**

The budget is intended to show the changes in the cost of the items included, not to show the minimum cost for an average family

\*Prior to 1926 number of commodities was 236.

(Continued from page 350)

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located,

but still fairly central, without modern conveniences.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises or falls (abnormally) the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and

soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climate conditions, nor for the differences in the heating value of the various fuels. It was estimated when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

## Index Numbers of Changes in the Cost of Living

In March, 1921, the Department published in the LABOUR GAZETTE a table of percentages of changes in the cost of living since 1913 as a tentative cost of living index number, using the figures of the above-mentioned budget for the calculation for food, fuel and rent, with preliminary figures for clothing and sundries added and this table has been brought down to date at intervals since. The calculation of a comprehensive cost of living index number covering all items of workingmen's family expenditure in progress since 1918 had been sufficiently advanced to enable the publication of preliminary figures by groups in a supplement to the LABOUR GAZETTE, January, 1926, on Prices in Canada and in Other Countries, page 9. This table gave figures for June and December each year from 1914 to 1926, inclusive. Figures have since been given for March and September each year since 1917 and the accompanying table gives figures for December each year from 1914 to 1920, quarterly from 1921 to 1930 and monthly since January, 1931. As stated in the above-mentioned supplement, the figures in the food group in the family budget are still used to show the changes in food prices but in the other groups the percentage changes in the prices of each article have been weighted according to workingmen's average family consumption, and in the fuel and light groups gas and electricity have been included.

\*The figures for "all items" were calculated by giving the following weights to each group: Food, 35%; Fuel, 8%; Rent, 18%; Clothing, 18%; Sundries, 20%.

### Cost of Electric Current and Gas for Householders

With rates in 1913 as 100, index numbers of electric light rates were 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.3; 1916, 86.3; 1917, 84.6; 1918, 82.9; 1919, 81.6; 1920, 81.1; 1921, 81.4; 1922, 80.1; 1923, 77.7; 1924, 76.5; 1925, 73.8; 1926, 73.2; 1927, 70.9; 1928, 69.3; 1929, 67.4; 1930, 64.7; 1931, 64.1.

The above figures were arrived at by converting to the base of 1913 as 100, an index number of electric current costs from 1900 to 1913 constructed for the Board of Inquiry into the cost of living in Canada, 1913-15 (Report Vol. 2, page 318), and bringing the figures down to 1931. The figures are unweighted. The Dominion Bureau of Statistics has issued an index number of electric current rates for household consumption on the basis of figures in 1926 as 100, as follows: 1923, 108.3; 1924, 105.1; 1925, 101.7; 1926, 100.0; 1927, 99.0; 1928, 97.1; 1929, 94.6; 1930, 92.3.

The following are index numbers of rates for manufactured and natural gas for the years 1913 to 1928 issued by the Dominion Bureau of Statistics: Manufactured gas, 1913, 100; 1914, 98.3; 1915, 98.1; 1916, 96.3; 1917, 100.7; 1918, 107.4; 1919, 111.1; 1920, 125.4; 1921, 143.6; 1922, 140.6; 1923, 135.7; 1924, 134.6; 1925, 131.6; 1926, 131.1; 1927, 128.9; 1928, 128.5; 1929, 128.0; 1930, 127.6. Natural gas, 1913, 100; 1914, 107.0; 1915, 112.5; 1916, 112.5; 1917, 113.9; 1918, 114.0; 1919, 116.1; 1920, 125.1; 1921, 137.6; 1922, 163.2; 1923, 163.0; 1924, 162.2; 1925, 179.3; 1926, 172.4; 1927, 166.9; 1928, 158.9; 1929, 159.1; 1930, 158.8. For the years 1900 to 1913 two index numbers of gas costs calculated for the Cost of Living Inquiry in 1914-15, have been averaged and converted to the base of 1913 as 100, as follows: 1900, 125.8; 1901, 125.8; 1902, 125.8; 1903, 125.2; 1904, 123.9; 1905, 120.1; 1906, 107.5; 1907, 108.8; 1908, 106.9; 1909, 105.7; 1910, 103.8; 1911, 99.4; 1912, 106.6; 1913, 100.0.

### Retail Prices

Beef prices showed little change during the month, sirloin steak averaging 25.2 cents per pound in February as compared with 25.1 cents in January, and rib roast averaging 18.8 cents per pound in February and 19 cents in January. These prices compare with 31.2 cents per pound for sirloin steak in February, 1931, and 24.4 cents for rib roast. Prices in the prairie provinces were considerably lower than elsewhere in Canada. Veal was slightly higher at an average price of 15.7 cents per

pound in February as compared with 15.4 cents in January. Fresh pork showed little change from the previous month, the price averaging 15.8 cents per pound. This is substantially lower than the average price of 25.2 cents per pound a year ago. Breakfast bacon averaged 22.8 cents per pound in February as compared with 24.5 cents in January and 41.4 cents in February, 1931. Lard was down in the average from 12.8 cents per pound in January to 12.5 cents in February, as compared with 20.1 cents per pound in February, 1931.

Eggs showed a substantial seasonal fall, fresh being down from an average price of 41.8 cents per dozen in January to 29.7 cents in February, and cooking from 32.6 cents per dozen to 22.7 cents. Milk was again slightly lower at an average price of 10.3 cents per quart. Declines were reported from Belleville, Peterborough, Oshawa, Toronto, Hamilton, Woodstock, Chatham, Cobalt and Moose Jaw. Butter was also lower in most localities, dairy averaging 22.3 cents per pound as compared with 24.4 cents in January, and creamery averaging 25.9 cents per pound as compared with 27.5 cents in January. Corresponding prices in 1931 were 33.5 cents per pound for dairy and 37.7 cents for creamery. Cheese also averaged lower at 21.5 cents per pound in February as compared with 22.2 cents in January.

Bread was unchanged at an average price of 6 cents per pound. Beans were down from an average price of 4.8 cents per pound in January to 4.6 cents in February. The price in February, 1931, was 7.1 cents per pound. Potatoes were again slightly lower at an average of 71.8 cents per bag of ninety pounds as compared with 72.6 cents in January and \$1.24 in February, 1931. Prunes fell from an average price of 11.7 cents per pound in January to 11.4 cents in February. Anthracite coal was unchanged at an average price of \$16.19 per ton. No changes were reported in rent.

### Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

In grain prices No. 1 Manitoba northern cash wheat, Port Arthur and Fort William basis, advanced from an average price of 60 cents per bushel in January to 63.2 cents in February. The low price for the month was 60½ cents per bushel reached near the beginning, and the high 67½ cents toward the end. The advance was said to be due mainly to the upward revision of foreign wheat quotas by France and Italy, together with the reports

of unfavourable weather in India. Other grains also were higher, western barley advancing from an average of 37.7 cents per bushel to 38.4 cents, flax from 98.5 cents per bushel to \$1.02, and rye from 43.6 cents per bushel to 44.1 cents. Flour prices at Toronto advanced slightly in sympathy with the movement in wheat, the price per barrel being up from \$5.03 in January to \$5.10 in February. Raw sugar at New York was substantially lower at \$1.15 per cwt as compared with \$1.35. Granulated at Montreal was unchanged at \$4.56 per cwt. The price of raw rubber was substantially lower at an average of 4.6 cents per pound as compared with 5.6 cents in January. The low price for the month was 3.57 cents per pound reached toward the end. In live stock good steers at Toronto advanced from \$5.89 per hundred pounds to \$5.95 but declined at Winnipeg from \$5.21 per hundred pounds to \$4.92. Veal calves at Toronto rose from \$7.81 per hundred pounds to \$8.13 and at Winnipeg from \$6.86 per hundred pounds to \$7.16. The price of bacon hogs at Toronto declined from \$5.14 per hundred pounds to \$4.94 and at Montreal from \$5.11 per hundred pounds to \$5.02, but was unchanged at Winnipeg at \$4.05 per hundred pounds. Lambs at Toronto were up from \$7.07 per hundred pounds to \$7.19, while the

price at Montreal was slightly lower at \$6.65 per hundred pounds. Creamery butter at Montreal was down from a price of 23.7 cents per pound to 21.4 cents, at Toronto from 23.9 cents per pound to 20.9 cents and at Winnipeg from 24 cents per pound to 20 cents. Fresh eggs showed little change, the price at Montreal averaging 31.3 cents per dozen and at Toronto 28.8 cents. The price of raw furs was substantially lower, ermine being down 20 per cent, beaver 10 per cent and mink 10 per cent, as compared with September quotations. Marten, however, showed substantial increases of 25 per cent. Raw cotton at New York was unchanged at an average price of 7.8 cents per pound. Raw silk at New York continued to decline, being down from \$2.90 per pound to \$2.58. Fir lumber advanced \$2 per thousand board feet to \$20. Steel tank plates declined from \$1.78-\$1.90 to \$1.72 per hundred pounds, and automobile body plates from \$3.44 per hundred pounds to \$3.21-\$3.32, these prices in Canadian funds. In non-ferrous metals copper declined from \$9.75 per hundred pounds to \$8.45, copper wire bars from \$8.89 per hundred pounds to \$7.16 (Canadian funds), and tin from 30 cents per pound to 29.8 cents. Coal oil was down at Montreal from 19.5 cents per gallon to 17.5 cents, and at Toronto from 18.5 cents per gallon to 17.5 cents.

## PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes give the latest information available as to the movements of prices in Great Britain and certain other countries. The index numbers of the cost of living are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases. The latest table showing cost of living and wholesale prices index numbers for various countries appeared in "Prices in Canada and Other Countries, 1931", issued as a supplement to the LABOUR GAZETTE, January, 1932.

### Great Britain

WHOLESALE PRICES.—The Board of Trade index number, on the base 1924=100, was 88.6 for January, showing no change from the December figure. Foods as a whole were 1.3 per cent higher, although one of the sub-groups, cereals, declined 1.1 per cent. Non-foods as a whole declined one per cent due to declines in wool, "other textiles" and miscellaneous commodities, which was partly counteracted by advances in metals and minerals and cotton.

The *Statist* index number on the base 1867-1877=100, was 84.7 at the end of January showing a decline of 0.8 per cent for the

month. The only groups showing advances were minerals and textiles, while all other groups showed declines.

COST OF LIVING.—The index number of the *Ministry of Labour Gazette*, on the base July, 1914=100, was 147 at February 1, which is the same as at January 1. There was no change in the index number for any of the groups. In the food group there were increases in the prices of potatoes and decreases in the prices of eggs and butter.

### Belgium

WHOLESALE PRICES.—The index number of the *Ministry of Industry, Labour and Social Welfare*, on the base April, 1914=100 (gold index) was 84.65 for November, a decline of 1.9 per cent for the month. Since March, 1929, there have been small increases recorded only in five months; in all other months there have been declines, which up to November, 1931, have amounted to 33 per cent.

### Germany

WHOLESALE PRICES.—The index number of the Federal Statistical Office on the base 1913=100, was 100 for January, a decline of 3.6 per cent for the month. Of the 16 groups,

only three showed advances; all other groups declined, the greatest fall in any one group was one of 9.8 per cent in coal.

**COST OF LIVING.**—The official index number, on the base 1913-1914=100, was 124.5 for January, a decline of 4.5 per cent for the month. Substantial declines were recorded in all groups, the greatest being one of 7.7 per cent in rent.

### South Africa

**COST OF LIVING.**—The index number of retail prices of the Census and Statistics Office, on the base 1910=1000 was 1152 for December, a fall of 1.8 per cent for the month. All groups were included in the decline.

### United States

**WHOLESALE PRICES.**—The Bureau of Labour Statistics index number, on the base 1926=100, was 67.3 for January, a fall of 1.9 per cent for the month. Every one of the ten main groups were included in the downward movement. As compared with January, 1931, there has been a fall of 14 per cent.

*Bradstreet's* index number, which is the sums total of the prices per pound of 96 com-

modities of common consumption was \$7.3186 at March 1, a fall of 2.7 per cent for the month. This is the lowest recorded since August, 1899. As compared with the previous month, the level of prices at March 1, showed slight advances in the hides and leather group, building materials and naval stores, while oils, chemicals and drugs were unchanged. The other eight groups were included in the general decline for the month.

**COST OF LIVING.**—The index number of the Bureau of Labour Statistics, on the base 1913=100, was 145.8 for December, a decline of 3.0 per cent from the June level. In this period, foods declined 3.4 per cent, clothing 7.2 per cent, rent 4.1 per cent, house-furnishing goods 5.6 per cent and miscellaneous items 0.6 per cent. The fuel and light group advanced 1.6 per cent due to seasonal changes, principally in the price of coal.

The index number of the Department of Labour and Industries, Massachusetts, on the base 1913=100, was 134.0 for January, a fall of 1.3 per cent for the month. Decreases were noted in food, clothing and fuel and light, while shelter and sundries were unchanged.

## FATAL INDUSTRIAL ACCIDENTS IN CANADA IN 1931

THE accompanying tables provide an analysis of the fatal accidents to workpeople in Canada in the course of their employment during the calendar year 1931, according to causes, provinces and months, as well as by industries. Quarterly statements giving a list of the accidents occurring during the period covered and certain particulars as to each, appeared in the LABOUR GAZETTE, May, August and November, 1931, and February, 1932. The tables include such fatalities from industrial diseases as are listed with fatal accidents by workmen's compensation boards.

The record is compiled from reports from the following governmental authorities: the Board of Railway Commissioners; the Explosives Division of the Department of Mines, Ottawa; the Workmen's Compensation Boards of Nova Scotia, New Brunswick, Quebec, Ontario, Manitoba, Saskatchewan, Alberta and British Columbia; the Ontario Factory Inspector; the Ontario Railway and Municipal Board; and the British Columbia Department of Mines. Reports were also received from the correspondents of the LABOUR GAZETTE, resident in the principal industrial centres throughout Canada.

Industrial accidents reported in the press are also included in the record after inquiry has been made to avoid duplication. Most of the

accidents in agriculture are recorded from press reports, and while it is not known to what extent the accidents in this industry are covered, it is believed that in this respect the record is fairly complete. On the whole, however, the information obtained from press reports is used merely to supplement information received from official sources.

The tables also include summary figures for 1930, being a final revision of the figures published in the LABOUR GAZETTE, March, 1931, by the inclusion of accidents occurring in 1930 which were reported too late for incorporation into the annual statement. These accidents were shown in detail in the supplementary lists in the LABOUR GAZETTE, May, August and November, 1931, and February, 1932. The figures for 1931, being still incomplete, are accordingly to some extent not comparable with the completed figures for 1930.

### Fatalities by Industries

The total number of fatalities recorded for the year was 1,135, the fatalities being attributed to the various industries in the following proportions: construction, 206, or 18.15 per cent of the total; transportation and public utilities, 199, or 17.53 per cent; agriculture, 162, or 14.27 per cent; mining, non-ferrous smelting and quarrying, 154, or 13.57 per cent;

manufacturing, 129, or 11·37 per cent; service, 91, or 8·02 per cent; logging, 73, or 6·43 per cent; electric light and power, 44, or 3·88 per cent; trade, 41, or 3·61 per cent; fishing and trapping, 33, or 2·91 per cent; and finance, 3, or 0·26 per cent.

In some industries where considerable changes in figures from year to year appear, these may be attributed to changes in industrial conditions or to particular occurrences; for example, in logging, mining, manufacturing, construction, transportation, trade and service, the decrease in the number of fatalities may be largely due to there being a reduction in the number of men engaged in these industries, while the increase in fatalities in the agriculture group is partly explained by extreme heat waves during the summer of 1931 which caused several deaths to men engaged in this industry. There was no serious disaster resulting in the loss of a large number of lives during the year. On May 11, six coal miners were killed at River Hebert, N.S., by an explosion in a mine. Four men employed in the mixing house of an explosives plant at Nobel, Ontario, lost their lives on June 26, in an explosion while mixing nitro-glycerine. On June 8, the commander of a government steamer and two other members of the crew were drowned from a canoe in the Metagaion river, Quebec. On August 18, four men engaged in forestry patrol were drowned in Rainy lake, Ontario, when their plane crashed into the lake. Five labourers engaged in highway and bridge construction near Pierreville, Quebec, were buried under a landslide at an excavation on November 9.

#### Fatalities by Causes

The classification of fatal accidents according to causes shows that the largest number, 292, came under the category "by moving trains, vehicles, etc." This includes all accidents due to cars or engines, including mine and quarry cars, and to automobiles and other power vehicles and horse-drawn vehicles, as well as accidents caused by moving implements (both those impelled by power and those drawn by horses), by moving watercraft and by aircraft. The largest number of accidents thus caused, 92, appear under the heading covering persons being struck or run over by, or crushed by or between cars and engines, 52 of these being engaged on steam railways. Also, 88 were caused by automobiles and other power vehicles and implements, 49 were in connection with watercraft (21 being in fishing and trapping and 13 in water transportation); 23 were caused by animal-drawn vehicles and implements (13 of which were in agriculture, accidents primarily caused by ani-

mals being classified elsewhere); 16 were caused by mine and quarry cars, 11 by aircraft, 8 by persons falling from or in cars or engines and 5 were due to derailments and collisions (4 in steam railways).

Next in order as a cause came "falls of persons," 231 in number, including 70 falls from elevations, 60 into pits, shafts, harbours, rivers, etc. (some of which resulted in drowning), 31 due to collapse of support, 28 falls from loads, etc., 13 into holds of vessels, 7 due to falls on the level, 6 from ladders, 6 on sharp objects, 6 down stairs and inclines and 4 into tanks, vats, kilns, etc.

"Dangerous substances" caused 165 fatalities, of which 54 were due to electric current, 32 to explosive substances, 27 to hot and inflammable substances and flames, 25 to gas fumes, etc., 12 to steam escapes, boiler explosions, compressed air, 9 to mine explosions from gas, coal dust, etc., and 6 to conflagrations.

Fatalities numbering 145 were caused by "falling objects" of which 63 were due to objects falling in mines and quarries, 35 to falling trees and limbs, 26 to objects falling from elevations, loads, piles, 12 to collapse of structure, 8 to breaking or loosening of straps, cables, etc., and 1 to other falling objects.

Animals caused 43 fatalities, including 29 caused by horses. There were 29 fatalities caused by handling of heavy or sharp objects, and 28 were caused by striking against or being struck by objects of which 23 were due to being struck by objects and 5 to striking against objects. There were 27 fatalities caused by prime movers, 21 by working machines, 13 by hoisting apparatus, and 5 by tools.

The category "other causes" includes 136 fatalities, of which 6 were deaths following infection not elsewhere specified, 27 due to industrial diseases, strains, etc., 3 to drownings of which no particulars were available, 20 to shooting and violence, 42 to cave-ins, landslides, ice-jams, etc., 36 to lightning, frost, storms, sunstroke, and 2 accidents of which no particulars were available.

#### Fatalities by Provinces

The classification of fatal accidents according to provinces shows that the largest number, 393, occurred in Ontario. There were 268 in Quebec, 156 in British Columbia, 88 in Nova Scotia, 76 in Manitoba, 68 in Alberta, 55 in Saskatchewan, 26 in New Brunswick and 5 in Prince Edward Island. In Ontario the largest proportion of fatalities occurred in the construction group, where there were 70, with 67 in transportation and public utilities, 61 in agriculture, 60 in manufacturing, 51 in mining,

(Continued from page 363)

non-ferrous smelting and quarrying, 33 in service, 18 in electric light and power, 15 in logging, 15 in trade, 3 in fishing and trapping, and 1 in finance. In Quebec, the largest number, 81, was also in the construction group, with 40 in transportation and public utilities, 39 in manufacturing, 32 in service, 18 in agriculture, 18 in electric light and power, 12 in logging, 12 in trade, 11 in mining, non-ferrous smelting and quarrying, and 4 in fishing and trapping. In Nova Scotia and Alberta there were respectively 39 and 20 mining fatalities, and no other industry suffered so many fatalities in Nova Scotia, while in Alberta there

were also 20 fatalities in agriculture. In Manitoba and Saskatchewan the largest number of fatalities was in agriculture, there being respectively 20 and 29 in this industry. In British Columbia there were 38 fatalities in logging, 36 in transportation and public utilities, 19 in construction and 18 in mining.

#### Accident Frequency in Certain Industries

The table of fatalities by months shows the highest point to have been in July, when there were 112, with 110 in May and also in June, the average per month being 94.58. The low point for the year, 62, was reached in December. This table gives estimates of the

number of employees in certain industries, the latest figures available being given in each case. The frequency rate of fatalities for the industries for which estimates were available was highest in electric light and power, being 2.72 per thousand persons employed during the year, and second for logging, being 1.83 per thousand. In mining, non-ferrous smelting and quarrying, the frequency rate was 1.73 per thousand, construction, 1.11 per thousand, manufacturing 0.21 per thousand. The total number of employees in the group transportation and public utilities, is not available; by sub-groups the frequency rates were: steam railways, 0.49, street and electric railways, 0.27, water transportation, 2.32, local transportation,

0.77, and telegraphs, and telephones, 0.27. In trade the frequency rate of 0.13.

Similar figures for 1930 are given in the table. It should be noted that in making these calculations the number of employees by industries used is the same for 1931 as for 1930, no later figures being available. It is known from employment statistics that the numbers of employees decreased in 1931, and if an allowance for the reduction were made the ratio of fatalities to numbers employed in 1931 would be somewhat higher than the figures given. As statistics are not available for making exact calculations in each case, the figures for 1931 are not comparable with those for 1930 except in a general way.

## Fatal and Non-Fatal Accidents in Canada Recorded by Provincial Workmen's Compensation Boards

The Labour Department's records of industrial accidents include only fatal accidents and fatalities arising out of employment, that is from industrial diseases, etc. The only information of a comprehensive nature as to non-fatal accidents is from the records of the Workmen's Compensation Boards in the various provinces, except that in manufacturing, mining and steam and electric railway operation accidents are dealt with by various governmental departments and commissions,

and these are also covered by the Workmen's Compensation Boards.

The annual reports of the Workmen's Compensation Boards are reviewed from time to time in the LABOUR GAZETTE, information being given as to accidents, amounts paid in compensation, etc. The annual reports of the several provincial Workmen's Compensation Boards for 1930 were summarized in the following issues: Quebec and New Brunswick, March 1931, pp. 312-314; Manitoba, April 1931,

(a) Accidents requiring medical treatment but not causing disability for a sufficient period to qualify for this compensation: The period varies in the several provinces; figures not reported by some Boards.

(b) Quebec from Sept. 1, 1928.

(c) Figures not yet tabulated; only total number reported to Board given.

(d) Saskatchewan from July 1, 1930.

(e) The province of New Brunswick Board reports 1,037 minor accidents in 1928 and 1,774 in 1929, involving no compensation or medical aid.

(f) including 833 claims partially disposed of.

pp. 436-437; Nova Scotia, May 1931, pp. 559-560; British Columbia and Saskatchewan, June 1931, pp. 654-657; Alberta, December 1931, pp. 1307-1308.

None of the provincial Boards have jurisdiction over all industries so that the accidents recorded are those in certain industries only. Most of the Boards deal with accidents in logging, mining, manufacturing, construction, transportation and public utilities, excluding agriculture, trapping, finance, domestic service, etc., but including to some extent fishing, trade, and governmental service.

The accompanying table summarizes the figures as to fatal and non-fatal accidents recorded by the several Provincial Workmen's Compensation Boards for 1928, 1929, 1930 and 1931. The figures not yet published by the

Boards in their annual reports have been secured as far as available. It may be observed that the Department of Labour figures show 1,766 fatal industrial accidents as occurring during the year 1929, while the total number of fatal accidents which were included by the provincial Workmen's Compensation Boards for that year was 963, this figure including none for Saskatchewan or Prince Edward Island. This difference is largely accounted for by the fact that the provincial Boards do not include accidents in all industries. In addition, however, the Boards' records include only accidents to employees, while the Labour Department's records include accidents to all persons when occupied in industry, including employers and workmen carrying on their own business, and there are many such, particularly in trucking, trade, etc., as well as in agriculture.

### Registered Trade Unions in Great Britain

The Chief Registrar of Friendly Societies has issued, as Part 4 of his annual report for the year 1930, a report on registered trade unions in Great Britain during the past ten years. A summary table is given, which shows that in 1929, 557 unions were on the register, with 3,326,838 members at the end of the year. (These figures include 85 employers' associations with 47,993 members). The largest industrial group of unions is the "Metals, machines, implements and conveyances," followed by "Mining and Quarrying," "Transport," and "Building." The income of these unions for 1929 included £7,209,454 received from members, £1,876,405 received as allowances from the Ministry of Labour for unemployment insurance and administration expenses; and £739,618 received from other sources.

Expenditures for the same year included £2,852,568 for unemployment, etc.; £398,283 for dispute benefits; £799,329 for Sick and Accident Benefit; £372,238 for funeral benefit; £1,184,848 for other benefits (including superannuation and grants to members); £179,675 for political fund; and £298,968 for grants, etc., to federations and other bodies.

At the end of the year funds to the amount of £11,590,446 were standing to the credit of the unions.

Three employers at Moose Jaw were recently fined \$10 each for having paid certain of their employees at rates lower than the minimum wages fixed by the act governing female employees. They claimed that they had made an agreement with the

employees that the latter should work at the lower rate, but the magistrate pointed out that the Act declared such agreements to be null and void.

### Tenant Farming in the Ontario Tobacco Industry

A system of tenant farming for the production of tobacco has recently been established in Norfolk County, Ontario. Most of the farm owners are companies, which began operations with hired labour, but have gradually adopted the tenant system. There are twelve such undertakings in Norfolk County owning 22,150 acres, of which 6,405 are used for tobacco growing by 172 tenants. The tenants, who have come from Belgium and the Southern United States, are provided with holdings varying between 30 and 40 acres, together with kilns, green-houses and other equipment. The companies supply the land, buildings, horses and machinery and pay the taxes, and the tenants supply the labour. The companies retain control of methods of production; they provide the seed and also undertake the curing of the crop, which is carried out by workers brought from the Southern United States. Half the wages of the curers are paid by the companies and half by the tenants; the companies pay their travelling expenses and the tenants provide them with board and lodging. Each tenant is supplied with a team of horses, and tractors are provided at cost prices. The profits are divided equally between owner and tenant. This method of exploitation is stated to have proved satisfactory so far.

## IMMIGRATION INTO CANADA DURING THE CALENDAR YEAR, 1931

A MARKED decrease in the number of immigrants admitted to Canada during the calendar year 1931 as compared with 1930 is shown in returns recently made by the Department of Immigration and Colonization. This decrease, which amounted to 74 per cent of the total for 1930, was in conformity with the policy of the governments as regards immigration, as set forth in Order in Council P.C. 1957, dated August 14, 1930

(LABOUR GAZETTE, August, 1930, page 1144). The following tables show the extent of the immigration of each racial group; the sex and occupations of the immigrants; the destination of the immigrants according to provinces; and the number of Canadians returning from the United States. In the latter table the largest groups of returning Canadians came from the States of Michigan, New York and Massachusetts.

## RECENT LEGAL DECISIONS AFFECTING LABOUR

### Mechanics Lien Act Designed for Protection of Workmen's Wages

An engineering firm (Rodenhiser) was engaged by the owners of a mine in Nova Scotia to look after the power plant in the mine, and they continued to carry out this duty until the mine was closed, when another firm (Typert) was engaged as caretaker, to keep the plant intact and the machinery oiled. The question of the payment of two months' wages having arisen after the closing of the mine, both firms claimed a lien upon the property and mining area, and they obtained from the County Court Judge a decision declaring their title to the lien.

An appeal against this judgment was made by one of the defendants in the Nova Scotia Supreme Court, on the ground chiefly that the Mechanic's Lien Act did not apply to the case as the services rendered by the plaintiff were not "work or labour performed at a mine or in connection with mining operation," the mine in question not having been in actual operation during the period in respect to which the claim was made. The appeal was dismissed with costs, Chief Justice Chisholm stating the purposes of the Act to be as follows:—

"The statute is a remedial statute and is designed to protect a class of men who are often the victims of imposition; it is designed to give the workman, in addition to personal recourse against his employer, the right to look to the property which he has improved by his labour, as some security for his pay. I think, therefore, one is justified in giving the statute an interpretation favourable to the claims of the workman, if the language fairly warrants it. A mine, equipped with machinery underground and on the surface, is a mine, whether minerals are or are not being brought to the surface. The work done by the Typerts was work and labour performed at a mine; as was in my opinion the work done by the Rodenhisers, although the latter were working some miles away. The phrase 'in connection with' is one in frequent use; it is not precise, but it is sufficiently wide to enable a generous application. If one can find a direct connection between the work done and the mining undertaking one is justified in considering it work in connection with a mining operation. The work of all the plaintiffs was so essential to the preservation of the mine and so closely connected with the continued existence of the property as a mine that I am led to the con-

clusion that section 32 (1) was intended to be and is wide enough to cover such work."

*Rodenhiser and Typert versus Nova Mac Mining and Power Corporation et al.*  
(Nova Scotia) 1932, *Dominion Law Reports*, vol. 1, page 548.

### Interpretation of Contributory Negligence

A workman who was engaged along with others in operating a steam shovel on a railway in Saskatchewan, was caught and drawn into the coils of a steel cable about a revolving drum, and seriously injured. He brought action against the railway company for damages, alleging negligence in the following particulars: (1) failure of the defendants to employ a safe system for the operation of the machinery; (2) failure of the defendants to furnish the plaintiff a safe place in which to work; (3) in having a cable in a state of disrepair, there being short ends of the strands of wire protruding, which caught the plaintiff's hands and drew them in between the cable and the revolving drum; (4) in putting the drum in motion without receiving instructions that it was in order to do so; (5) in putting the drum in motion without first warning or instructing the plaintiff to stand clear.

The defendants denied negligence and pleaded that the plaintiff himself was guilty of negligence in placing his hand, or hands, on the cable when the drum was revolving, in not remaining in the safe and proper place in which he was required to be for the proper fulfilment of his duties, and in being in an improper place and position contrary to his instructions and the requirements of his duties as an employee of the defendants.

The jury found that the railway company was guilty of the negligence "that caused the accident," which negligence it described as lack of protection at the niggerhead, and absence of proper signalling when about to start operation of the shovel; the jury also found that the plaintiff was guilty of negligence that caused the accident in that he approached too close to the niggerhead when the latter was in motion.

The trial judge interpreted the jury's verdict as a dismissal of the plaintiff's claim and gave judgment accordingly. On appeal by the plaintiff the Saskatchewan Court of Appeal sustained this decision, holding that the workman's conduct was the proximate cause of the accident; which was however due to

the negligence of both parties, and that neither had a chance, after the negligence of the other, of avoiding it by reasonable care.

*Cherbon versus Canadian Pacific Railway Company (Saskatchewan), 1932, Western Weekly Reports, vol. 1, page 513.*

A workman was injured while he was engaged, with other workmen, in laying a new railway track in Saskatchewan. His foot was caught between a rail and a tie, and a wheel of the worktrain which was proceeding slowly behind the workman struck and crushed his leg before he could be released. The wheel which struck him was the front wheel of the "pioneer," the car which carries the track-laying machinery at the head of the train. Action for damages was brought by the workman against the railway company on the ground of negligence, and the jury found the company responsible for the injury because of the fault of the brakeman on the "pioneer" car in not having applied the emergency air-brake quickly enough after he had sensed the danger. The jury found that no contributory negligence had been shown by the plaintiff, and awarded him damages to the amount of \$3,039. On appeal by the railway company the Saskatchewan Court of Appeal sustained the judgment of the lower court, stating that the jury's verdict might be in accordance with the evidence which appeared to show that, if the brakeman did apply the brake, he had not applied it so quickly as he should have done. Mr. Justice Martin dissented, holding that the evidence did not support the finding that the defendant was negligent as alleged.

*Klapischuk versus Canadian Pacific Railway Company (Saskatchewan), 1932, Western Weekly Reports, vol. 1, page 528.*

### Families' Compensation for Fatality due to Negligence

The question of the applicability of the Contributory Negligence Act (Statutes of British Columbia, 1925, chapter 8) to an action brought under the Families' Compensation Act (Revised Statutes of British Columbia, 1924, chapter 85) was the subject of a recent decision by Chief Justice Morrison in the British Columbia Supreme Court. The Chief Justice explained the abuses formerly existing under common law, which the Families' Compensation Act was designed to remedy.

"At common law," he said, "the cause of action which a person had against another for injuries received through the negligence of that other, being an action of tort, was

extinguished by his or her death. So unjust was this condition of affairs considered that the Legislature enacted the Families' Compensation Act. By this Act certain persons, as set forth therein, are given a cause of action against the person through whose negligence the injuries resulting in death were caused to the deceased. This cause of action is not a revival of that cause of action enuring to the deceased had he lived but a wholly new and statutory one. The statute sets forth, in sec. 3 thereof, the cause of action which these statutory representatives of the deceased shall have, and it is in the following words:

Whenever the death of a person shall be caused by wrongful act, neglect, or default, and the act, neglect or default is such as would (if death had not ensued) have entitled the party injured to maintain an action and recover damages in respect thereof . . .

"It will be seen from this enactment that the cause of action which the statute gives, while not the same, is yet entirely dependent upon the cause of action which the deceased had.

"Originally at common law a party who was suing another for damages for injuries suffered and occasioned by the negligence of that other could be met by two defences which are the usual ones pleaded in this type of action: firstly, to deny and negative any negligence on the part of the defendant; and, secondly, to allege and prove that if the defendant was guilty of negligence materially contributing to the accident so also was the plaintiff, no matter to what degree the plaintiff's negligence extended—this is the doctrine of contributory negligence. Later the doctrine of ultimate negligence appeared, which however does not arise for consideration in this case.

"It is thus seen that a defence of contributory negligence was a good defence and disentitled the plaintiff to recover anything. And, under the Families' Compensation Act, the said representatives of the deceased could be met with the same defence and with the same results.

"This, then, was the state of the law when the Contributory Negligence Act was passed in this province. That statute abrogates the old common-law doctrine of contributory negligence except in so far as the doctrine of ultimate negligence can be said to arise therefrom. At the present time it is as if this old doctrine of contributory negligence had never been evolved. Now, where both plaintiff and defendant have been guilty of negligence materially contributing to the accident, each is assessed in damages according to the degree in which he or she was in fault, the question

of the degree of fault being a question of fact and for the determination of a judge or a jury, as the case may be.

"Thus it is perfectly clear that a plaintiff can now recover damages, where formerly he or she was unable so to do. As was stated by Orde, J.A., in *Stark v. Batchelor* (1928) in dealing with the Contributory Negligence Act of Ontario:—

The Act is not designed for the protection of defendants. It is intended to give a plaintiff, guilty of contributory negligence, some relief where formerly his action would have been dismissed. It entitles him to recover his damages, but to the extent to which he was to blame he must suffer the loss himself.

Instead of giving any rights to a defendant, the Act has cut down the complete defence formerly available to him and has made him liable for a proportionate part of the plaintiff's damages.

"Turning again to sec. 3 of the Families' Compensation Act quoted above, it follows that the said representatives of the deceased also are able to maintain an action where formerly they could not do so; and this because the Legislature has thought fit to replace the old doctrine of contributory negligence, except as stated above, by the Contributory Negligence Act."

In the present case the Chief Justice held that the plaintiff was entitled to recover that proportion of the verdict of the jury representing the degree of fault in which the defendant had been found to be.

*Hunter versus Clarke* (British Columbia) 1932, *Western Weekly Reports*, vol. 1, page 466.

#### Advances paid to Agent on Commission not Recoverable

The interpretation of an agreement by which the services of an employee were hired on the commission basis, where the employee had failed to earn the full amount of an advance which was made to him each week under the terms of the agreement, was discussed recently in the Superior Court at Montreal in the case of *Joyce versus Lucerne-in-Quebec Community Association*. The agreement provided that the agent was to receive a commission of 10 per cent of the membership sales which he effected, and that, further, he was to receive \$75 each week as an advance against such commissions, regardless of whether or not the commissions earned up to the time of payment were in excess of the full amount due for commissions. The agent having earned less than the amount of the

advances made to him by the company, the company made certain deductions from his cheques, and the agent thereupon brought action for the full amount, the company making a counter-claim for the repayment of unearned commissions. The Court dismissed the counter-claim with costs. On the point at issue several decisions of New York Courts were cited, one of which (*Peace Piano Company versus Taylor*) was as follows:—

"The action was brought to recover from a salesman the difference between the amount paid him on a drawing account and the amount of commissions earned and credited to him on such account. The plaintiff does not allege an agreement to repay any excess of advances over commissions earned. The appellate division held that, without an agreement expressed or implied to repay the excess of a drawing account over and above commissions earned, the employer cannot recover such excess from the employee."

#### Section of Juvenile Delinquents Act declared to be Invalid

In the Alberta Supreme Court during February, Mr. Justice Ives declared Section 20, subsection 2 of the Juvenile Delinquents Act (Revised Statutes of Canada, 1927, chapter 46) to be *ultra vires* of the Parliament of the Dominion. Subsection (2) is as follows:—

(2) In every such case (i.e., of a child, adjudged to be a juvenile delinquent) it shall be within the power of the court to make an order upon the parent or parents of the child, or upon the municipality to which it belongs, to contribute to its support such sum as the court may determine: Provided that where such order is made upon the municipality, the municipality may from time to time recover from the parent or parents any sum or sums paid by it pursuant to such order.

The point arose in connection with the appeal of the municipal district of Hazelwood from the judgment of Rev. Father Carleton, sitting as a judge in Juvenile Court. Father Carleton found a certain child in the Hazelwood municipality to be delinquent, and ordered the municipal district to contribute \$1 per day to her support for an indefinite period. From this judgment the municipality appealed on two grounds: First, that the child in question was not a resident of the municipality, but rather of the city of Edmonton, and second, that the Federal Act empowering the court judge to make a municipality pay was *ultra vires* of the Dominion Parliament.

[NUMBER 4

## NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

### Monthly Summary

**L**ARGELY owing to seasonal curtailment in the outdoor industries, employment in Canada at the beginning of March showed a decrease, according to returns received by the Dominion Bureau of Statistics from 7,709 employers of labour, each with a minimum of fifteen employees, and representing all industries except agriculture, fishing, hunting and highly specialized business. The working forces of these firms aggregated 809,704 persons, as compared with 819,736 in the preceding month. This reduction caused the index number (based on the 1926 average as 100) to decline from 89.7 on February 1, to 88.7 at the beginning of March, as compared with 100.2, 110.2, 111.4, 102.6, 97.5, 92.6, 88.1, 91.8, 91.0, 82.9 and 89.1 on March 1, 1931, 1930, 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively.

At the beginning of March, 1932, the unemployment percentage reported to the Department of Labour by local trade unions was 20.6, compared with 22.0 per cent at the beginning of February, 1932, and 15.6 per cent at the beginning of March, 1931. The percentage for March was based on the returns tabulated by the Department of Labour from a total of 1,819 labour organizations, representing 183,159 members.

Reports received from the offices of the Employment Service of Canada indicated an increase during February in the average daily placements in employment, as compared with those of the previous month, but a decline in comparison with February last year, the major change under each comparison taking place in the construction and maintenance group. Vacancies in February, 1932, numbered 33,426, applications 55,558, and placements in regular and casual employment 32,633.

The average cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in sixty-nine cities was again slightly lower at \$7.27 for the beginning of March, as compared with \$7.34 for February; \$9.14 for March, 1931; \$11.67 for March, 1930; \$11.23 for March, 1929; \$10.54 for March,

1922; \$16.92 for June, 1920 (the peak); and \$7.68 for March, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics based upon prices in 1926 as 100 showed little change at 69.1 for March, as compared with 69.2 for February; 75.1 for March, 1931; 91.8 for March, 1930; 95.6 for March, 1929; 98.3 for March, 1922; 164.3 for May, 1920 (the peak); and 64.7 for March, 1914.

The loss in working time caused by industrial disputes in Canada during March was almost double that recorded for the previous month, the increase being caused by strikes of coal miners in the Prairie Provinces. In March, 1931, the time loss was about equal, owing to a strike last year in the women's clothing industry at Toronto. Eleven disputes were in progress at some time during the month, involving 1,501 workers and resulting in the loss of 26,410 working days. Corresponding figures for February, 1932 were: 17 disputes, 3,611 workers and 14,679 working days, and for March, 1931, 6 disputes, 1,635 workers and 25,026 working days.

### Industrial Disputes Investigation Act.

During the past month the Department of Labour received a report from the Board of Conciliation and Investigation established in connection with the dispute between the Hull Electric Company and their motormen, conductors and other employees. Five new applications were received, and were under consideration when the month closed. Particulars of the recent proceedings under the Act, together with the text of the report, will be found on page 390 of this issue.

### Senator Robertson President of International Conference.

At the opening session of the International Labour Conference (League of Nations) on April 12, the Hon. Senator G. D. Robertson, late Minister of Labour of Canada who is one of the Canadian Government delegates, was elected President of the Conference. The new President stated that he regarded his election as a tribute to the

Dominion of Canada, and to the constant support that had been given by Canada to the work of the Organization; and also as showing that the Conference recognized the importance of the countries of the New World, and particularly North America. The task of the Conference in the present time of economic stress was, he suggested, to maintain the workers' conditions of employment and standards of life.

Senator Robertson was one of the Canadian Government delegates to the first International Labour Conference, held at Washington in 1919, and took an active part in the founding of the organization. He has also closely followed the proceedings of the successive conferences since the establishment of the Organization in that year.

#### **New Workmen's Compensation Act in New Brunswick.**

New workmen's compensation legislation was enacted by the New Brunswick legislature at the session just concluded, its intention being as Premier Richards pointed out, to simplify the actual operation of the existing act rather than to introduce any new principles. The new Act is largely based upon the recommendations that were contained in the report of the Royal Commission, composed of Mr. Justice Grimmer and Mr. George A. Stone (LABOUR GAZETTE, March, 1931, page 267), which was presented to the Legislature together with the text of the Bill. In conformity with the wishes of organized labour the Workmen's Compensation Board, as reconstituted, will include a labour representative, the premier expressing the hope that as a result "there would be less cause for complaint in regard to applicants for compensation not having their cases reconsidered." A summary of the new Act will be given in a future issue in an outline of the legislation of 1932.

#### **Work of St. John Ambulance Association in 1931.**

The important public service rendered by the Canadian Branch of the St. John Ambulance is described in the Annual Report for 1931, recently published. "Many cases have been reported during the year," it is stated, "of outstanding instances of First Aid rendered by the Association's graduates, of whom there are now some 170,000 in the Dominion. A splendid contribution is annually made to the welfare of the country by this army of voluntary workers in the saving of human life and suffering; and the economic value of this service in lessening lost-time and disability as

a result of accidents and sickness cannot be overestimated."

An ever-increasing interest in the teaching of First Aid is reported, particularly among industrial concerns, which recognize the humanitarian and economic value of such training. The number of persons who received instruction in First Aid, home nursing and home hygiene during 1931 was 22,488, 12,037 certificates of proficiency being issued. The total number of certificates and awards issued in Canada up to December, 1931, was 219,825.

The report gives particulars of the work in the various provinces, and refers to the co-operation given to the movement by the Canadian National and Canadian Pacific Railways, the Bell Telephone Company, the Northern Electric Company, Canadian Industries Limited, the Steel Company of Canada, and the Royal Canadian Mounted Police and Department of National Defence. It is pointed out that "the local centre is an indispensable part of the organization of Provincial Councils. Without such centres the Association cannot get local effort and Community interest behind its work, which is so necessary to lasting success. First Aid is community work of a most useful order."

#### **Dominion and Provincial governments confer on unemployment**

The Prime Minister announced in the House of Commons on March 23, that on the expiration of the Unemployment and Farm Relief Act, 1931, on May 1, the premiers of all the provinces would be invited to come to Ottawa to confer with the federal Government for the purpose of ascertaining what measures might be found necessary to enable the Dominion to discharge its duty in assisting the provinces to meet their constitutional obligation. "The constitutional obligation" Mr. Bennett said, "being that of the provinces, we are giving them assistance because of the general economic conditions that obtain throughout the world, and we believe we should confer with them as to how the situation might be best met."

In accordance with this announcement a conference was held at Ottawa on April 9, when Mr. Bennett, with other members of the Dominion cabinet, met the following representatives of the provinces:—

Prince Edward Island.—Hon. J. D. Stewart, Premier.

Nova Scotia.—Hon. Gordon S. Harrington, Premier; Hon. J. F. Fraser, Provincial Secretary; Hon. Percy C. Black, Minister of Highways.

New Brunswick.—Hon. C. D. Richards, Premier; Hon. D. A. Stewart, Minister of Public Works; Hon. A. J. Leger, Provincial Treasurer.

Quebec.—Hon. L. A. Taschereau, Premier.

Ontario.—Hon. W. H. Price, Attorney General; Hon. W. Finlayson, Minister of Lands and Forests; Hon. J. D. Monteith, Minister of Public Works and Labour; Hon. E. A. Dunlop, Provincial Treasurer.

Manitoba.—Hon. W. R. Clubb, Minister of Public Works.

Saskatchewan.—Hon. W. C. Buckle, Minister of Agriculture.

Alberta.—Hon. J. E. Brownlee, Premier.

British Columbia.—Hon. Ralph W. Bruhn, Minister of Public Works.

Mr. Bennett intimated in the House of Commons on April 11 that a statement in regard to the conference would be made later in the session in connection with additional legislation, based on the conclusions that had been reached, which it was proposed to introduce.

### **Proposed compulsory works councils in England**

A Bill has been introduced in the Parliament of Great Britain to require the establishment of a "works council" in every industrial establishment which employs fifty workers or more. The form of the Council may vary, and individual industries may submit plans of their own for approval, but every scheme must provide for the representation of "the several grades of persons participating in the concerns or undertaking, whether as managers, in supervisory, administrative or technical capacities, as foreman, or as weekly wage-earners." The Councils would be called on to formulate, in consultation with the management, agreed works rules in respect to the following subjects:—hours of work; overtime; period of notice of dismissal; methods of calculating and paying wages; holidays; absences caused by sickness, etc.; dismissals for inefficiency, or for shortage of work (this and other matters to be subject to discussion by the Council); and short working time.

Periodic discussions would be held by the proposed Councils on a wide range of subjects, including works organization and conditions of employment, meals, selection of personnel, apprenticeship, welfare, engagement and dismissal of employees, holidays, pensions and benevolent schemes (sickness, unemployment, etc.), profit-sharing and co-partnership schemes, continuation schools, health, trading prospects and policy, etc.

The Bill would further provide for the appointment by the Minister of Labour of a

"Works Councils Advisory Committee" to assist in the preparation of draft schemes for the various industries. In this work the Minister would invite the co-operation of the General Council of the Trade Union Congress, the National Confederation of Employers' Organizations, and the Association of Joint Industrial Councils and Interim Reconstruction Committees.

### **Proposed enlargement of British Unemployment Insurance Act**

At the close of 1930 the Labour Government of Great Britain appointed a Royal Commission, with Judge Holman Gregory as chairman, to investigate workmen's compensation with a view to making the system self-supporting, and to relieving it from the exceptional burdens that had been laid upon it during the industrial depression (LABOUR GAZETTE, January, 1931, page 4). An interim report by the Commission was outlined in the LABOUR GAZETTE, July, 1931, page 781. That report contained certain proposals by which expenditures on unemployment benefits might be reduced.

According to a report in the *Daily Herald* (London) of March 7, the Commission had then ready a report containing further proposals which, if adopted, would have the effect of greatly enlarging the Act by the inclusion of large classes of employees who are now outside its scope. This extension, it was stated, would affect 1,250,000 domestic servants, 500,000 railwaymen, 700,000 farm workers, and 200,000 professional workers. Farm workers would have a special system of payment, with lower rates and contributions. The railwaymen proposed for inclusion are members of the permanent staff excluded under the present Acts. Their inclusion has been opposed by the trade unions. If the Commission's report should be adopted, it is stated that the present wage or salary limit of £250 a year, above which the scheme does not apply, will be raised to £500, thus bringing the salaried workers between those figures.

Careful examination was given by the Commission to the working of the means test imposed last November, and to the operation of the Anomalies Act, under which large numbers of married women have been disqualified. The Commission, in its interim report, advised a means test to be applied to persons who have drawn a certain amount of benefit.

### **Unemployment compensation in Wisconsin**

The provisions of the Wisconsin Act providing for unemployment reserves and compensation were outlined briefly in the last issue (page 323). Prominence is given to this legis-

lation—the first law of the kind in the United States—in the current issue of the *American Labour Legislation Review*. The Act is shown to involve a departure from the English or European plan by which the employers' contributions are turned into a common fund. The Wisconsin law on the other hand, seeks to make each employer responsible for his own unemployed workers. The new statute is to take compulsory effect on July 1, 1933—unless the employers of at least 175,000 eligible persons have by June 1, 1933, actually established fair voluntary plans. These plans must have been previously approved by the State Industrial Commission as meeting certain minimum standards, and must thereafter continue under the Commission's supervision. In case the 175,000 quota is not reached the compulsory act will apply, but approved voluntary plans will be exempted from some of its requirements.

After July 1, 1933, each employer subject to the law must normally contribute 2 per cent on his payroll, to build up an unemployment reserve for his workers. Such contributions are made deductible under the Wisconsin income tax law. Unless permitted by "exemption" to make other arrangements, each company pays its 2 per cent contribution into a central state depository—thus making enforcement possible and assuring availability of the money.

"The Wisconsin statute," it is stated, "takes the position that much of the present irregularity of jobs should prove preventable. It holds that this country should not passively accept and 'insure' existing fluctuations in employment, without first making strenuous and sustained efforts to reduce them to a minimum. The Act provides machinery for encouraging employer co-operation within the state on every promising front; but it definitely holds that the responsibility for steady-going work can and should be focussed on each individual employer—by penalizing his failure and rewarding his success. As against the various suggested schemes for insurance, or the pooling of reserve funds by industries and prevention, the Wisconsin statute prefers to try 'plant reserves and prevention' . . . Not 'industries' but individual enterprises hire workers, employ business brains, and keep books. Those brains should devote themselves to this problem. . . . At all events somewhat steadier work, or compensation in its absence, must become a recognized charge against business, prior even to interest and dividends."

#### **United States Governors' Commission recommends unemployment reserves**

The principle of unemployment reserves by employers or groups of employers, as embodied in the Wisconsin legislation, is also included among the recommendations of the Interstate Commission on

Unemployment Insurance which resulted from the Governors' Conference last year (LABOUR GAZETTE, February, 1931, page 120). These recommendations are as follows:—(1) The compulsory establishment of state-wide systems of unemployment reserves; (2) The payment by each employer of a contribution amounting to two per cent of his payroll; (3) The payments made by each employer shall constitute the unemployment reserve of his firm and shall be so treated in the accounts; (4) The maximum rate of benefit shall be 50 per cent of an employee's wage or \$10 a week, whichever is lower; and the maximum period of benefit shall be 10 weeks within any twelve months. Employees who suffer unemployment by reason of short time employment shall be eligible for benefits whenever their week's wages are less than 60 per cent of their average weekly wage, but the benefit for partial unemployment shall not exceed the difference between the wage actually received and 60 per cent of the employee's average weekly wage. In no case, however, shall the benefit of a part-time employee exceed \$10 a week; (5) The financial responsibility of an employer shall be strictly limited by the amount of his unemployment reserve; (6) When the accumulated reserve per employee shall exceed \$50 the employer's contribution shall be reduced to 1 per cent of his payroll; and when the reserve has reached \$75, he shall make no further contributions to the fund until the reserve again falls below \$75 per employee.

"At the best," the report concludes, "there will for some time remain a residuum of unemployed who must continue to look for assistance to the agencies of private and public charity. With the establishment and extension of unemployment compensation plans, however, we should be taking the first steps in reducing the wastes and damage to self-respect which characterize our present disorderly methods of handling the unemployed; and we should have put ourselves in the position of applying more scientific methods to the treatment of the total problem of unemployment."

### Proposal for medical examination and relief by Dominion

The following resolution, moved by Mr. J. P. Howden, of St. Boniface (Manitoba) was debated in the House of Commons on March 21:—

That, in the opinion of this house, the government should take into immediate consideration steps which would: (a) provide for periodic medical examination of the Canadian people; (b) afford medical relief for those suffering from disease.

The Hon. Murray MacLaren, Minister of Pensions and National Health, stated that subjects of the kind mentioned in the motion lay within provincial rather than federal jurisdiction. He pointed out that "two years ago medical examinations were suggested by the Canadian Medical Association, and as a result four life insurance companies adopted the suggestion. They were assisted by the Canadian Medical Association, and the federal Department of Pensions and National Health provided literature. The result was that the Canada Life, the Sun Life, the London Life and the Confederation Life are now carrying out at their own expense periodic medical examination on their risks. However," the Minister added, "that is a very long way from the country at large accepting such a program." Dr. MacLaren pointed out finally that enormous organization, effort and expense would be required to give effect to the proposed scheme.

It will be recalled that the House last year adopted a resolution asking the government to consider the possibility of a federal grant to the provinces "equal to one-third of the cost of establishing, and to cover permanently, such full-time health units as may be organized" (LABOUR GAZETTE, June, 1931, page 628). On that occasion the Prime Minister undertook that that subject would be brought before a future conference of the governments concerned: health units throughout Canada being possible only through the joint action of the federal and provincial authorities.

### Workmen's Compensation Act for Prince Edward Island

A bill to provide for the establishment of a system of workmen's compensation is under consideration by the Legislature of Prince Edward Island. A Railway Employees' Compensation Act has been in existence in the Province since 1926 (LABOUR GAZETTE, June, 1926, page 546), but no board has yet been appointed to administer this Act, which therefore remains inoperative. Under the provisions of section 4 of the Government Employees' Compensation Act (Revised Statutes

of Canada, 1927, chapter 30) employees of the Dominion Government in Prince Edward Island receive accident compensation in accordance with the scale of benefits provided under the Workmen's Compensation Act of the adjoining Province of New Brunswick.

With the adoption of the new legislation in Prince Edward Island, all the provinces of Canada will have in effect Workmen's Compensation Acts on the employers' joint liability and accident fund principle.

### Function of pension reserves in Workmen's Compensation

The Nova Scotia Accident Prevention Association, in the March issue of their publication *Industrial Safety News*, corrects a common misapprehension as to the purpose of the pension fund accumulated by the Workmen's Compensation Board. "From time to time," it is stated, "the statement is made, presumably by persons misinformed as to the insurance principles governing workmen's compensation enactments, that the Board has established excessive reserves. It would appear that such persons confuse the pension reserve fund which at the end of the year 1930 amounted to \$5,113,916.69, with a general surplus fund. In this connection a brief explanation as to how this pension fund has accumulated and is functioning may be of interest.

"When an accident occurs involving the payment of compensation or pension during following years, the present value of the amount of money that will be needed to pay the benefits over the estimated period of years, is ascertained from actuarial tables. In some exceptional cases such compensation payments may continue for a period of fifty years. As the Board is operating on what is known as the capitalized reserve plan, the present value of such payments is set aside in a lump sum out of the assessments for the year in which the accident occurs and is known as a reserve; this money is invested. In some cases the persons for whom reserves have been set aside may die before these monies are exhausted, but on the other hand some beneficiaries may live beyond the estimated period or after all the reserves set aside have been exhausted. The reserves remaining in the first mentioned cases are utilized in paying further benefits to those who live beyond the estimated period. So for all accidents happening in any particular year, monies are provided out of the assessments for that year to take care of the dependents entitled to compensation benefits.

"This system not only insures future payments to all persons entitled to them, but is also fair to industry in that it prevents the

unloading of pension burdens by employers who may have serious and costly accidents and a few years hence may leave the province or retire from business, leaving the remaining employers and others who may start operations in the future to carry the burden."

**Back-to-the-Land Movement in Ontario.**

The Agriculture and Colonization Committee of the Ontario Legislature submitted during March the following recommendations designed to encourage the settlement of vacant farm lands in the Province: (1) Bonusing of settlers for acreage cleared and seeded; (2) Immediate survey of vacant farms in Ontario; (3) Publication of the results of the survey in Canada and Great Britain; (4) Eventual establishment of a distinct department of Colonization under a deputy minister; (5) Establishment of "shacks" in farming districts where prospective settlers would live while preparing the land; (6) The doubling of Ontario's cultivated acreage by a concentrated back-to-the-land movement.

Evidence was presented to the committee showing that in the northern sections of the province many farms had been abandoned, and the former holders were anxious to return, but had not means to resume possession; and that throughout Ontario there were hundreds of improved or partly improved farms which could be obtained at a low price. It was pointed out that at present information as to vacant farms was difficult for the average person to obtain.

**Revival of Canadian handicrafts in the home.**

Reference was made in the last issue (page 248) to the work of recolonization and land settlement that has been carried on during the past two years by the Dominion Government, and by several of the Provincial Governments, chiefly in connection with the relief of unemployment. In connection with this movement the government of the Province of Quebec has taken measures to revive the traditional French-Canadian handicrafts that were formerly practised in the rural districts of the Province, but had fallen into disuse. It is hoped that these industries will enable the new settlers, as well as the families already on the land, to maintain themselves by supplementing their incomes as agriculturists. A provincial school of weaving has been established in the City of Quebec, where the old patterns and dyeing systems will be used, and instruction will be given in weaving, rug making, the making of dyes, and the fashioning by hand of artistic articles for use or ornament.

It may be noted that a similar effort to encourage home industries throughout Canada has been carried on for several years by the Canadian Handicrafts Guild (with headquarters at 1240 St. Catherine Street West, Montreal). The Guild is an incorporate association organized "to encourage, retain, revive and develop handicrafts and home art industries throughout the Dominion; to prevent the loss and deterioration of these crafts; to preserve knowledge and skill possessed by new settlers and to aid new-comers during the trying early days of their settlement in a new country, by providing them with a market for good hand-work; to encourage industry and thrift in the homes of the people, making their work profitable and honourable by means of exhibitions of the products of their skill, thereby increasing contentment in their homes and augmenting the assets of the Dominion; to educate the public to the value of good hand-work by holding and taking part in exhibitions at home and abroad, and by other means thought desirable, to send out teachers and supervisors among the workers, to keep up the standard of excellence; to keep records in order to prevent the extinction of any arts or crafts."

**Unemployment Statistics throughout the World.**

Reference was made in the February issue of the LABOUR GAZETTE, page 111, to statistics of unemployment in various countries which had been compiled in the International Labour Office at the beginning of the present year. In view of the increasing interest in unemployment the statistics which had previously been compiled in the International Labour Office dealing with the general levels of unemployment have now been supplemented by tables showing the movements of employment and unemployment in certain important industries or occupations during the five-year period 1927-31. These latter appeared for the first time in the March issue of the *International Labour Review* published by the International Labour Office in Geneva. The data given are for the percentages unemployed or index numbers of employment; where series of both kinds exist for a given country, preference has in most cases been given to unemployment statistics. The information in question is not generally comparable internationally, the primary object of the tables being to show the movements of unemployment and employment within each country.

Unemployment statistics are published quarterly in *Industrial and Labour Information*, also issued from Geneva, the last report bringing the information up to March, 1932. In practically every country, it is stated, unemployment has increased since corresponding figures were published three months ago, while the increase in comparison with last year is just as universal and is proportionately greater. Only Australia and New Zealand show a smaller number of unemployed than were recorded three months ago. Everywhere else unemployment is on the increase, though to a varying extent. The increase is low in Great Britain, being in part due to recent administrative changes in unemployment insurance. In Germany the total unemployed now exceeds six million persons. In France the number is estimated as being over a million, while for Italy it now exceeds a million persons for the first time.

The *Monthly Labour Review* (Washington) March, 1932, gives particulars in regard to employment in the executive Civil Service of the United States. At the end of January, 1932, there were 609,283 employees on the payrolls, of whom 581,131 were permanent, and 28,152 were temporary employees. This number represented a gain of 10,663, or 1.78 per cent during the past twelve months. During January 12,119 employees were separated from their jobs because of resignations, termination of appointments, death, or other causes, and 15,034 new employees were hired, the net turnover rate indicated by these figures being 1.99 per hundred employees.

The Superintendent of Penitentiaries, in his report for the fiscal year ended March 31, 1931, makes the following statement as to the principal cause of the criminal tendencies which result in terms in the various penitentiaries in Canada:—"Many of the young men coming to the various penitentiaries are Canadian born. Their downfall is directly traceable to the lack of proper home training and influence. The percentage to whom this will apply is estimated at about 85. The judge of the Juvenile Court of Calgary, Alta., stated that 95 per cent of those who came before him did so because of lack of proper home influence and training. The Judge of the Juvenile Court of the city of Detroit places the percentage of those who come before him because of lack of proper home training and influence at 99. The statements of both of the above judges have been published during the past year."

The Hon. C. D. Richards, premier of New Brunswick, stated in the Legislature on March 3 that a policy of land clearing had been put into effect in the province during the past year. The sum of \$36,000, he said, would be necessary to provide for this service, and under the arrangements with Ottawa in connection with the relief fund, 50 per cent of that amount would be refunded. "This means an increase of something like 10,000 acres cleared and brought into cultivation during the past year, not to mention the encouragement and stimulation of agriculture. It is a new service and something that if continued may mean from year to year quite a large expenditure of public money."

The general level of farm wages in the United States on January 1, 1932, according to tables given in the *Monthly Labour Review*, March, 1932, was 13 per cent lower than in October, 1931, and 2 per cent below the 1910-1914 average. The decline in the wage index was accompanied by a further increase in the supply of farm labour and a decline in demand. The supply on January 1, was 120.9 per cent of normal and the demand 60.5 per cent of normal; the corresponding figures for October, 1931, were 113.4 and 68.9, respectively. Supply expressed as per cent of demand on January 1, was 199.8, which is the highest ratio recorded by the Department of Agriculture since the beginning of its record in 1918. Reports received by that department, particularly from the North Central States, cite numerous instances of farm labourers working for board and lodging alone.

The Hon. John Bracken, Premier of Manitoba, speaking in the Provincial Legislature on March 21 on the financial problem involved in the relief of unemployment, claimed that the municipalities and provinces of western Canada, with their limited resources, ought not to be required to bear the major cost of this relief in the future. "If no other policy", he continued, "is acceptable to the Dominion, we consider that steps should be taken immediately to work out a contributory unemployment insurance scheme on a national basis under Federal auspices, the cost to be placed jointly upon industry, the state and those who are in employment. As to the cost of relief, if the Dominion will not assume the whole cost, the province will continue to share any necessary part that the Dominion requires in its general policies. The money, however, should be raised by the Dominion, since the Dominion can borrow it at lower rates of interest than the provinces and there is no reason why this saving should not be passed on to the provinces and the municipalities."

## GENERAL REVIEW OF THE INDUSTRIAL SITUATION

### Employment

THE employment situation at the end of March was reported by the superintendents of the Employment Service of Canada to be as follows:—

In Nova Scotia, farmers were busy hauling logs, firewood and hay. Due to favourable weather, farm products were plentiful. Lumber operations remained quiet. Fair catches of fish were reported along the Coast. Mines in the New Glasgow zone operated from two to four days per week, while in Cape Breton and vicinity, the days worked averaged from one to three. All manufacturers of food stuffs and confectionery reported improved business owing to Easter week. Foundries and machine shops at New Glasgow were very quiet, also the steel plant at Trenton, and little improvement was noted in the iron and steel group at Sydney. There was slight activity noted in the building trades, although, at Halifax, many small buildings were under way, with some skilled and unskilled workers employed. This city also had about 50 men engaged on sewers and street work. Railway and steamship transportation of passengers was heavy over the holidays, with freight traffic fair. Trade also was more brisk, owing to the Easter season. There was a slight change for the better in the Women's Domestic Section, and a number of placements were made.

Farming, other than routine work, was quiet in New Brunswick. Owing to continued cold weather, little work had been done in the sugar woods. There was no fishing except at Saint John, due to the ice running in the Gulf and along the Straits. Logging also was at a standstill. In the manufacturing group, pulp and paper and box mills, alone, showed any pronounced activity. At Saint John, building construction was fairly active, with a large number of skilled mechanics employed. Elsewhere, conditions were not so favourable, but assistance was given by means of relief work on streets and sewers. Passenger traffic was brisk over the holidays. Waterfront work at Saint John was fair, but the movement of freight was somewhat slow. Trade also was slightly better in preparation for Easter. There was little change noted in the Women's Section.

Only a few farm placements were made in the province of Quebec, and these were in the territory covered by the Montreal office. Elsewhere no action was noted. Very little activity was also reported in the logging industry, with the exception of Hull, where a

small number of applicants were placed as log drivers. Mining showed no improvement. Manufacturing also registered little change. At Hull, orders were listed from toy manufactures and sewing establishments. In Montreal, quietness prevailed, particularly in the boot and shoe, textile, clothing, tobacco, rubber, and metal trades. Quebec city, however, reported the boot and shoe industry as active, but other lines worked on reduced time. Conditions at Sherbrooke seemed to improve, as factories were working every day, but at Three Rivers, except for boots and shoes and cottons, which were busy, all other manufactures, with paper in particular, displayed no activity. Sherbrooke alone reported building construction as active; in other cities, many building labourers were idle; the city of Montreal, however, employed a large number of men on relief work and snow removal. Freight transportation at Three Rivers was slightly improved. Commercial conditions were not bright, except at Sherbrooke, where they were stated as satisfactory. Placements in personal services had increased by ten per cent in Hull, but in Montreal, vacancies for women domestics were scarce and applicants sought work in large numbers.

A fair number of inquiries for farm help in the province of Ontario was in evidence, though few placements were being made as yet. Indications pointed to low wages both for single and married men for the coming summer. As bush camps are now completing winter operations, the demands and placements in this group were materially reduced. This condition was likely to prevail until the spring drives opened, when some men for this kind of work would be required. Only an occasional applicant was being taken on at the mines. Slightly more activity in industrial conditions was noted at Toronto, and at Windsor there was a good demand for skilled workers in the auto plants. Brantford, also, reported that the total number of hands employed in the textile industry compared very favourably with the staff level of 1929, but slackness continued among iron and steel manufacturers. One of the encouraging features was the resuming of operations at the steel works at Sault Ste. Marie. The paper mill there was also running steadily. Conditions at Chatham, likewise, indicated better things in sight, particularly in the auto industry, but few other than former employees were being taken back. Slackness prevailed in the building industry, and little employ-

ment offered, except that provided by the municipality as a relief measure. The demand for women domestic workers was fairly good, with no difficulty experienced in filling all requirements.

Little change was noted in the demand for farm help in Manitoba. Some applicants preferred to wait for the spring wage and were reluctant to go out under the Farm Relief plan, as the season was so far advanced. Con-

MONTHLY STATISTICS REFLECTING INDUSTRIAL CONDITIONS IN CANADA  
(Official Statistics except where noted)

	1932			1931

(4) Figures for end of previous months.

(5) Figures for four weeks ending March 26, 1932, and corresponding previous periods

(6) Sugar production given in periods of four weeks ending January 30, 1932, March 28, February 28 and January 31, 1931

(15) The index of the physical volume of business includes forestry, mining, construction, manufacturing, trade, imports, exports, car loadings, shares traded and bank debits. Industrial commodity production includes forestry, mining, manufacturing and construction. Manufacturing includes production of flour, sugar, newsprint, pig iron, steel and automobiles; imports cotton, rubber, wool and petroleum; slaughtering of cattle, sheep and hogs; storage holdings of butter and cheese.

sidering the more than normal movement of men to farms during the winter months, it was uncertain as to whether the usual seasonal increase in orders for spring help would be in evidence. There was no demand for loggers or miners. Manufacturing also was quiet. Not much action was taking place in building construction, but a number of applications for permits was expected when the weather was more favourable. A further reduction also occurred in orders for skilled and unskilled labour. Relief undertakings still provided the main channel of employment for those seeking work. Retail trade showed little improvement, and except for an increased number of applicants in the Women's Domestic Section, conditions in that department remained unchanged.

Placements in farming in the province of Saskatchewan were somewhat better, with prospects for a fair number of experienced men. Mines at Estevan were not working so steadily, some closing for two days a week. Thus, for lack of orders a number of miners were thrown out of work, and forced to register as general labourers. Building construction was extremely quiet. Relief work continued to furnish employment for a certain number. Country calls for domestics in the Women's Section were hard to fill, but applicants for city orders were easily available.

Though wages for farm help in the province of Alberta still continued low, many applicants were anxious to work at anything offered. It was not expected, however, that the demand for spring help would be as great as in former years, even though crop conditions appeared favourable. Coal orders showed a decline, as the season was practically over, so that mines were running part time only. Manufacturing showed no improvement, all industries continuing very slack. Quietness also prevailed in building and railway construction. Numbers still sought relief, but in some districts the relief programs had been somewhat curtailed. Wholesale and retail trade was quiet, with collections difficult. Applicants in the Women's Domestic Section were greatly in excess of orders.

Cold, unsettled weather had somewhat retarded spring work on farms in British Columbia, so that there was only a fair demand for workers in that industry. Logging was largely confined to the operation of tie cutting mills, but at Revelstoke, conditions in this industry appeared on the up-grade, due to a contract for several thousand feet of logs and the demand for cordwood. No new developments took place in mining and short time continued, with a surplus of labour available. Manufacturing was very quiet, also trade. There was little doing in building con-

struction, as only a few repair jobs were available. Relief work on highways provided the chief means of assistance for those requiring help, other than direct relief given, in some centres, through the office of the provincial government. At Kamloops, however, employment for a limited time was afforded to all available trainmen due to a thousand cars of grain being sent to the Coast. Construction work on the C.P.R. at Walachine also continued. Revelstoke, likewise, reported employment in the various branches of railway service as satisfactory. A few extra men were taken on for a short period of overhaul work at the drydock and shipyard at Prince Rupert. Longshoring was fairly active at New Westminster, but quiet at Vancouver. Little domestic work was offered in the Women's Section, with a surplus of workers registered.

#### EMPLOYERS' REPORTS.

Largely owing to seasonal losses in the out-of-door industries, there was a decline in employment at the beginning of March, according to monthly statements furnished to the Dominion Bureau of Statistics by 7,709 of the larger employers of labour throughout Canada. The working forces of these firms aggregated 809,704 persons, as compared with 819,736 in the preceding month. This decrease caused the index number (based on the average for 1926 as 100), to decline from 89.7 on February 1, to 88.7 at the beginning of March, as compared with 100.2, 110.2, 111.4, 102.6, 97.5, 92.6, 88.1, 91.8, 91.0, 82.9 and 89.1 on March, 1931, 1930, 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively.

The trend was downward in the Maritime and Prairie Provinces and Ontario, but favourable in Quebec and British Columbia. In the Maritime Provinces, the largest losses were in highway construction, but logging, transportation and trade were also slacker. On the other hand, gains were registered in railway construction and manufacturing. In Quebec, important increases took place in manufacturing, particularly in the iron and steel, textile and leather groups, and construction was also more active; logging, however, was seasonally quiet, and trade and transportation also afforded less employment. In Ontario, iron and steel and textiles recorded considerable recovery, while highway construction, logging, trade, transportation and building were seasonally slack. In the Prairie Provinces, coal mining, transportation, construction and trade reported reduced activity, but manufacturing and logging recorded moderate increases. In British Columbia, transportation, trade and mining showed decreases, while

manufacturing, logging and highway construction registered improvement.

Employment declined in Ottawa, Windsor and the adjacent Border Cities, Winnipeg and Vancouver; the trend was favourable in Montreal, Quebec City and Hamilton, while in Toronto practically no change was indicated. In Montreal, there were additions to staffs, chiefly in manufacturing, transportation and construction, but trade was not so brisk. In Quebec, manufacturing and transportation afforded more employment, while other industries reported only minor fluctuations. In Toronto, the food, leather, textile, lumber and construction groups showed heightened activity, but there was a considerable decrease in printing and publishing, and in trade, so that there was no general change in the city as a whole. In Ottawa, curtailment was indicated, chiefly in construction, although manufacturing was also quieter. In Hamilton, slight improvement was reported, especially in manufacturing and construction. In the Border Cities, a small decline was noted, almost entirely in construction owing to the completion of certain unemployment relief works; manufacturing, however, was decidedly more active, especially automobile works. In Winnipeg, the decrease was largely in construction and trade, while manufacturing was brisker. In Vancouver, manufactures recorded a small gain on the whole, but trade, construction and transportation reported curtailment.

A review of the returns by industries shows improvement in manufactures, notably in textiles and iron and steel, while leather, lumber, food, non-ferrous metal and beverage factories were also more active. On the other hand, operations in logging, construction, mining, transportation, communications and trade were seasonally curtailed.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of March, 1932.

#### TRADE UNION REPORTS.

Contrary to the consistently downward movement that employment for local trade union members has experienced since the beginning of

September last year the trend of activity in February was more favourable, though the change from the previous month was slight. This was manifest by the returns tabulated for February from an aggregate of 1,819 labour organizations representing 183,159 members, 37,754 of whom, or a percentage of 20.6 were without employment on the last day of the month, contrasted with 22.0 per cent of inactivity in January. Slacker conditions, however, prevailed than in February, 1931, when

15.6 per cent of the members involved were idle. Pronounced improvement for Quebec and Nova Scotia unions was chiefly responsible for the better situation shown from January, renewed activity in garment establishments in Quebec affecting the percentage for that province favourably, while in Nova Scotia better employment for coal miners accounted largely for the change. In the garment trades, however, short time work continued prevalent. In New Brunswick and British Columbia unions minor gains in activity occurred. On the other hand, Ontario, Manitoba, Saskatchewan and Alberta unions reported slight employment recessions. Greater depression was indicated in all provinces than in February a year ago, Quebec and Ontario unions showing most pronounced curtailment of activity, though in New Brunswick also employment declined substantially.

On another page of this issue appears a more detailed article with tabular statements on unemployment at the close of February, 1932.

#### EMPLOYMENT OFFICE REPORTS.

During the month of February, 1932, the offices of the Employment Service of Canada effected a total of 32,633 placements, of which 9,849

were in regular employment and 22,784 in casual work. Of the placements in regular employment, 7,149 were of men and 2,700 of women. Applications for work were received from 55,558 workers, of whom 46,084 were men and 9,474 were women, while employers notified the Service of opportunities for 27,740 men and 5,686 women, a total of 33,426 vacancies. A gain was shown in vacancies listed and placements effected and a decrease in applicants registered, when a comparison was made with the reports of the previous month, but in comparison with February, 1931, all groups registered declines. Reports for January, 1932, showed 31,538 vacancies offered, 57,755 applications made, and 30,721 placements effected, while in February, 1931, there were recorded 51,809 positions available, 73,240 applications for work, and 50,874 placements in regular and casual employment. A report in detail of the work of the offices for the month of February, 1932, will be found elsewhere in this issue.

#### BUILDING PERMITS AND CONTRACTS AWARDED.

According to a report prepared by the Dominion Bureau of Statistics, the value of permits issued in 61 cities in Canada during February, 1932

was \$2,578,597 as compared with \$2,761,929 in the preceding month and with \$6,395,659 in February, 1931.

The *MacLean Building Review* states that while awards in the engineering contracts were down for March, contracts for building work went ahead of those for February, the March total being \$10,766,700 as compared with \$14,802,600 in the preceding month. Western Canada showed the largest increase. The immediate outlook for increased building was better than for several months. According to MacLean Building Reports, Limited, most of the estimated value of March contracts awarded are shown for the Province of Ontario, which took care of 42.6 per cent of all contracts and which had a value of \$4,579,400. In Quebec the awards amounted to \$3,297,400, or 30.6 per cent. The Prairie Provinces took care of 18.6 per cent, the value being \$2,500,700. British Columbia followed with 5.3 per cent, or a valuation of \$573,200, and the Maritimes have \$312,000, or 2.9 per cent.

By groups, 39 per cent of the contracts during March applied to engineering work, the value being \$4,196,900. Business buildings picked up, accounting for 38.4 per cent, or \$4,137,400. 18 per cent related to residential work, the value being \$1,931,700. Industrial building showed \$500,700, or 4.6 per cent of the total for the month.

#### Production and Trade

##### INDUSTRIAL PRODUCTION.

Figures showing the volume of production in certain industries during recent months and also in the corresponding months last year are shown in the table on page 385.

The *Monthly Review of Business Statistics*, published by the Dominion Bureau of Statistics, gives the following summary of the business situation in Canada:—

"Industrial operations, measured by production indexes, showed moderate improvement in February compared with the preceding month. The index of manufacturing showed a gain of two points, each of the sixteen component factors being adjusted for seasonal tendencies. The output of pig iron and steel ingots was greater in February than in the preceding month, indicating slight betterment in the primary iron and steel industry. The production of automobiles showed a gain in February greater than normal for the season, and further expansion is expected in coming months. The moderate betterment in the steel and motor car industries during February was a constructive development. The imports of crude rubber, after seasonal adjustment, showed a slight gain suggestive of preparations for enlarged operations in tire factories. The imports of crude petroleum at 48,600,000 gallons indicated curtailment from the level of January. Exports of planks and

boards were 60,445,000 feet in February compared with 53,847,000 feet in the preceding month, indicating a strengthening of demand in external markets for Canadian lumber. The output of newsprint was down in the second month of the year, even after adjustment for seasonal tendencies. Imports of raw cotton were 7,074,000 pounds in February compared with 6,527,000 in the preceding month, a marked gain being shown after seasonal adjustment. The slaughtering of live stock indicate increased activity in meat packing establishments, after the elimination of the seasonal factor. Exports of nickel were 4,351,000 pounds compared with 3,145,000 pounds in the preceding month, representing a sharp gain. The exports and receipts of gold at the Mint were more than maintained after seasonal adjustment. Mining operations, despite curtailment in some departments, were on the whole not greatly changed from the level of the preceding month. The new business obtained by the construction industry measured by contract awards and building permits indicated quiet conditions characteristic of the winter months. The railway freight movement showed acceleration in February, loadings amounting to 174,106 cars compared with 165,838 in January.

"A more confident attitude regarding the future trend of business was in evidence during the latter part of the month owing to reassuring financial developments. These included the gain of \$3,200,000 in notice deposits on January 31. The gain in high grade bond prices was probably the most constructive development, gaining added significance in view of the pronounced decline in short term interest rates in the chief external money markets. The decline in bond yields and interest rates is a clear indication of an improved credit situation, a prerequisite of business recovery."

*Coal.*—Canadian coal producers reported an output of 1,188,349 tons of coal during February; an increase of 23.4 per cent over the February, 1931, production of 962,710 tons, but a decline of 9.9 per cent from the average for the month during the past five years. The February output included 720,431 tons of bituminous coal, 47,718 tons of sub-bituminous coal and 420,200 tons of lignite coal. Alberta's production reached a total of 537,025 tons as against 503,159 tons produced in the preceding month, and 336,502 tons in February, 1931. Nova Scotia's output was 349,830 tons, a decline of 13.4 per cent from the total for the corresponding month of last year. Compared with February a year ago the British Columbia's production of 174,027 tons showed an increase of 18.8 per cent;

Saskatchewan's output of 108,435 tons recorded a 99.1 per cent advance; on the other hand, the New Brunswick production of 19,032 tons was 10.3 per cent lower.

#### EXTERNAL TRADE.

A summary of Canadian trade in February, 1932, prepared by the Department of National Revenue, shows that the merchandise entering Canada for consumption amounted to \$35,586,085, as compared with \$34,114,507 for the preceding month and with \$50,994,084 in February, 1931. The chief imports in February, 1932, were fibres, textiles and textile products, \$6,601,827; iron and its products, \$6,009,004; non-metallic minerals and products, \$5,438,047.

The merchandise exported from Canada during February, 1932, amounted to \$37,018,792 as compared with \$38,366,699 in the preceding month, and with \$44,913,979 in February, 1931. The chief exports in February, 1932, were wood, wood products and paper, \$11,180,802 agriculture and vegetable products, mainly foods, \$9,817,866; animal and animal products, \$5,008,682.

#### Strikes and Lockouts

The time loss due to industrial disputes in March, 1932, was almost twice as great as that recorded for the previous month, owing to protracted strikes of coal miners in western Canada. In comparison with the figures for March, 1931, almost twice as many strikes and lockouts were recorded. The number of workers involved, however, was slightly less than in the same month last year, while the time loss incurred showed little change, as during March last year some 1,500 women's clothing factory workers were involved in a dispute at Toronto. There were in existence during the month eleven disputes, involving 1,501 workers, and resulting in a time loss of 26,410 working days, as compared with seventeen disputes, involving 3,611 workers, and resulting in a time loss of 14,679 working days in February, 1932. In March, 1931, there were on record six disputes, involving 1,635 workers and resulting in a time loss of 25,026 working days. At the end of the month there were on record nine disputes involving approximately 1,400 workers. These figures do not include those strikes and lockouts in which employment conditions were no longer affected but which had not been formally called off by the union.

#### Prices

The average cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in sixty-nine cities was again slightly lower at

\$7.27 for the beginning of March, as compared with \$7.34 for February; \$9.14 for March, 1931; \$11.67 for March, 1930; \$11.23 for March, 1929; \$10.54 for March, 1922; \$16.92 for June, 1920 (the peak); and \$7.68 for March, 1914. The decline was due mainly to lower prices for salt pork, bacon, lard, milk, butter, flour, tea and potatoes. The price of eggs was considerably higher. Including the cost of fuel and rent with that of foods the total budget averaged \$17.16 at the beginning of March, as compared with \$17.25 for February; \$19.47 for March, 1931; \$21.96 for March, 1930; \$21.52 for March, 1929; \$20.96 for March, 1922; \$26.92 for July, 1920 (the peak); and \$14.35 for March, 1914. Fuel was slightly lower, due to decreases in the prices of anthracite coal and wood. No changes were reported in rent.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics based upon prices in 1926 as 100 showed little change at 69.1 for March, as compared with 69.2 for February; 75.1 for March, 1931; 91.8 for March, 1930; 95.6 for March, 1929; 98.3 for March, 1922; 164.3 for May, 1920 (the peak); and 64.7 for March, 1914. In the classification according to chief component materials two of the eight main groups were higher and six were lower. The Vegetables and Vegetable Products group showed a slight advance, higher prices for barley, flax, oats, peas, rye, bran and shorts more than offsetting declines in the prices of flour, rubber, sugar, molasses, potatoes and hay. The Animals and their Products group showed a substantial advance, the first which has occurred in this group since July, 1931, and was due to higher prices for lambs, butter, cheese, lard and canned salmon which more than offset lower prices for leather, calves, steers, eggs and meats. The groups which declined were: the Fibres, Textiles and Textile Products group, mainly because of lower prices for raw cotton, raw silk and raw wool; the Wood, Wood Products and Paper Group, due to lower quotations for lumber and pulp; the Iron and its Products group, due to declines in the prices of certain rolling mill products; the Non-Ferrous Metals and their Products group, because of decreased prices for aluminium, antimony, copper, tin, lead, silver and zinc; the Non-Metallic Minerals and their Products group, due to lower prices for anthracite and domestic coal; and the Chemicals and Allied Products group, due to declines in the prices of copper sulphate, zinc oxide, red lead and dyeing materials.

## RECENT PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

**D**URING the month of March the Department received the report of a Board of Conciliation and Investigation established under the Industrial Disputes Investigation Act to enquire into a dispute between the Hull Electric Company and certain of its employees being motormen, conductors, trackmen, etc., members of Division No. 591, Amalgamated Association of Street and Electric Railway Employees of America. A 10 per cent wage reduction proposed by the company and directly affecting 82 employees was the cause of the dispute. The personnel of the Board was as follows:—His Honour Judge J. H. Scott, of Perth, Ontario, chairman, appointed by the Minister in the absence of a joint recommendation from the other Board members; Messrs. H. P. Hill, K.C., of Ottawa, and W. F. O'Connor, K.C., of Toronto, nominees of the company and employees, respectively. The report was signed by all three members, Mr. Hill dissenting, however, regarding a certain point. The text of the report is given below.

### Applications Received

Five applications for the establishment of Boards of Conciliation and Investigation under the provisions of the Industrial Disputes Investigation Act were received in the Department of Labour during March. Three of the applications were submitted by employees of the Corporation of the City of Winnipeg, as follows: (1) by teamsters and helpers and employees of the incinerator, being members of the General Workers' Unit of Civic Employees of the One Big Union; (2) by electricians, drivers, chauffeurs, labourers, electric operators, apprentices, meter readers, instructors, trimmers, and fuel plant operators, members of the Civic Federation of Employees of the City of Winnipeg, and (3) by cable splicers, troublemen, linemen and foremen employed in the city's Hydro Electric Utility and being members of the International Brotherhood of Electrical Workers. A 10 per cent wage reduction which had been put into effect by the civic authorities was the cause of the dispute in each instance. The applications were under consideration when the month closed.

The two other applications which reached the Department during March were received from coal operators and miners, respectively, in the Drumheller district, Alberta. The operators concerned include the Jewel Collieries,

Ltd., Midland Coal Mining Co., Ltd., Rose-dale Coal Co., Ltd., Western Gem Coal Co., Ltd., Thomas Coal Co., Ltd., Newcastle Coal Co., Ltd., Alberta Block Coal Co., Great West Coal Co., Ltd., and the Star Coal Mines Ltd., while the employees, numbering approximately 1,400, are members of District 18, United Mine Workers of America. The dispute arose in connection with negotiations looking to a new working agreement, the coal operators pressing for a reduction of 20 per cent in all contract rates and \$1 a day in the case of datal labour, while the employees on the other hand request an increase of 10 per cent in day wages and contract rates. In addition both parties demand an adjustment of certain alleged inequalities. Early in April a Board was established by the Minister of Labour and members thereof were appointed as follows: on the companies' recommendation, Mr. W. C. Robertson, K.C., of Calgary, Alberta; on the employees' recommendation, Mr. A. J. Morrison, also of Calgary. A chairman had not been named at the time of going to press.

### Prosecutions

Information was laid on February 23 by Mr. W. L. Hamilton, President and Manager of the Crescent Collieries, Ltd., near Bienfait, Saskatchewan, against five coal miners employed in the collieries, alleging that they had violated the provisions of the Industrial Disputes Investigation Act by going on strike on February 22 without first making application for the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act to inquire into the dispute. The charges were heard by Police Magistrate J. C. Martin, K.C., of Weyburn, Saskatchewan, who found the five miners guilty of an unlawful strike, and imposed a fine in each case of \$20 and costs, or 21 days in gaol. The miners immediately filed notice of appeal.

Word has also reached the Department of a prosecution for alleged infringement of the terms of the Industrial Disputes Investigation Act which took place before Police Magistrate Martin in October last. Information was laid by Constable H. W. Taylor against James Bryson, of Lethbridge, Alberta, charging him with inciting employees in the Estevan coal fields to continue on strike. The Magistrate dismissed the case.

## Report of Board in dispute between the Hull Electric Railway and Motormen, Conductors, Trackmen, etc.

*In the matter of The Industrial Disputes Investigation of a Dispute Between Hull Electric Railway (Employer) and certain of its Employees, being motormen, conductors, trackmen, etc., members of Division No. 591, Amalgamated Association of Street and Electric Employees of America (Employees).*

The Honourable WESLEY A. GORDON, K.C.,  
M.P.,  
Minister of Labour, Ottawa.

SIR,—The Board of Conciliation, consisting of Judge J. H. Scott (Perth), Chairman, and Messrs. H. P. Hill, K.C. (Ottawa) and W. F. O'Connor, K.C. (Toronto), members, appointed by you to consider the foregoing dispute, beg to report that sittings were held at Ottawa at places convenient and agreeable to all concerned on the 10th, 17th, 23rd, 24th and 26th days of March ult., and on the 2nd, 6th and 7th days of April instant, which were attended by the disputants, their representatives and witnesses.

The duty of the Board was to investigate and adjust a proposal by the Hull Electric Railway to reduce by ten per cent the scale of wages now existing and which has prevailed since 1923 so far as affects the operatives of the company.

The Board cannot refrain from commending the intelligence, moderation and fine feeling which characterized the presentation of the respective view points of the parties, while equally commending the steadfastness of each in seeking to protect their material interests. Every facility was accorded both sides to place before the Board evidence, data and argument to support their several contentions, and in this respect nothing was left unsaid or unsubmitted which would in any way help the Board in its deliberations.

During the interval between the 26th March and the resumption of the sittings on the 2nd April, the parties were directed to confer with a view to a mutual settlement and, failing this result, it has become the duty of the Board to reach a conclusion as to a reasonable adjustment of the present dispute.

The Board have very carefully surveyed the whole situation, considered the serious falling off in the revenues of the Company and its prospective continuance, analysed the reduced living expenses now enjoyed by the Em-

ployees as compared with those which prevailed at the time the present wage schedule was established and which then constituted an important element in fixing that schedule, and have come to the conclusion that, in view of the economies determined upon otherwise by the company in their controllable expenditures, the employees affected by this inquiry can, without substantial sacrifice, and may reasonably be asked to, accept, for a time, a lowered rate of wages, in order to assist in restoring the financial balance of this enterprise, in which, after all, they have a common interest.

The Board therefore recommend that, commencing on the 1st day of April instant, and in effect for one year thereafter, the wages of the employees who are concerned in the company's application, be reduced eight per centum on the schedule heretofore paid.

The fixation of the date, April first, for the commencement of the reduction is not intended as a pronouncement by the Board that the contention by the employees that an agreement as to wages, not terminable until June 30 next, exists, is not well founded. The Board is advising merely, by way of conciliation, and is not pronouncing upon that matter.

Mr. Hill concurs in the foregoing report and recommendation except that portion thereof which recommends that the amended scale of wages shall remain in effect for one year. Having regard to economic conditions, not only of the company but of Canada, it would be, in his judgment, unfair to expect either the company or the employees to be bound to any scale of wages for such period. He is of opinion that the company, as well as the employees, should be untrammelled in their respective rights to take the necessary proceedings to alter the wage scale during the coming year as they themselves may at any time decide.

Respectfully submitted.

Ottawa, April 7, 1932.

(Sgd.) J. H. SCOTT,  
Chairman.

(Sgd.) H. P. HILL,  
Board Member.

(Sgd.) W. F. O'CONNOR,  
Board Member.

## PROCEEDINGS FOLLOWING THE REPORT OF THE ROYAL COMMISSION ON COAL MINING IN NOVA SCOTIA.

THE LABOUR GAZETTE for March contained the text of the report of the Royal Commission appointed by the Provincial Government to investigate and report upon conditions in the coal mining industry in the province, including the wages and working conditions and changes which should be made, costs of production, marketing, etc. As stated in the same issue, the miners voted on March 14 against accepting the recommendation contained in the report for a reduction in wages of ten per cent for datal workers, and twelve and one-half per cent for contract miners, no adults to be paid less than \$3.25 per day; the miners, however, continued to work under the reduced scale which was put in force on March 15. The Executive Board of the union, the United Mine Workers of America, District 26, decided to call a district convention at New Glasgow on April 18 to determine further action.

In the meantime, on March 5, the Executive Board had made representations to the provincial government in regard to other recommendations of the Commission, especially with regard to the closing down of certain mines employing over two thousand men, on account of the excessive cost of their operation.

The delegation requested further examination of this proposal, and also of other proposals for certain changes in methods that had been approved by the Commission, claiming that these proposals were not practicable or economic, and that no mines should be closed until provision had been made for the displaced employees.

On the previous day the provincial government had introduced legislation to establish a Board for the settlement on farms of miners and other unemployed persons.

On March 12, the Hon. Gordon S. Harrington, Premier of Nova Scotia, with members of his cabinet, attended a conference with the Federal Government at Ottawa, when measures for increasing the market for Nova Scotia coal in Quebec and Ontario were discussed. Premier Harrington afterwards stated that in his opinion certain proposed measures then referred to the Dominion Fuel Board for report would increase the market for Nova Scotia coal by one million tons per annum. The report of the Royal Commission indicated that in 1931 shipments to St. Lawrence River ports were 1,855,524 tons out of a total of 4,315,429 tons shipped.

## ALBERTA LABOUR DISPUTES ACT, 1926

### Report of Board in Dispute between the City of Calgary and its Firefighters

THE Board of Conciliation appointed under the Labour Disputes Act, to consider a dispute between the City of Calgary and Local Union No. 255, International Association of Fire-Fighters, Calgary, held sessions March 7, 8 and 9.

After reviewing the whole situation, the Board failed to reach an unanimous agreement, and majority and minority reports were made. The majority report reviews the whole proceedings of the Board, and states that in the opinion of the members signing same, the agreement reached between the City and Local Union No. 255 in the year 1929, was made after giving due consideration to costs of living; and that the evidence considered by the Board at this session demonstrated that a definite reduction had taken place in the said cost of living since that date. The two members, therefore, recommended that a re-

duction of four per cent be made in the wages of all members of the organization. The report was signed by Judge A. A. McGillivray and R. H. Weir.

The minority report, which was signed by A. Farmilo, representative of the employees, disagrees with the findings of the majority members, and states that due consideration has not been given to the hazardous nature of the occupation of the employees, hours of labour they are called upon to work, or to the relative rates paid to firemen in the City of Calgary and other cities in the Dominion. The report states that the member entirely disagrees that the actual living cost should be the system on which remuneration for firemen should be paid, and further states that the member is of opinion that there should be no reduction in the present rate of pay.

## CANADIAN RAILWAY BOARD OF ADJUSTMENT No. 1

### Summary of Recent Decisions

**F**IVE new decisions were given recently by the Canadian Railway Board of Adjustment No. 1. Earlier decisions were outlined in the *LABOUR GAZETTE*, September, 1931, page 973, and in previous issues; and the fourth report of the proceedings of the Board, covering the period from October, 1927, to September 30, 1930, was issued as a supplement to the issue of December, 1930.

The Board was established under a voluntary agreement concluded in 1918 between the various railway companies and certain of the railway organizations, its original purpose being to secure uninterrupted service on the railways during the continuance of the war. The Board consists of six representatives of labour, one for each of the following railway brotherhoods; the Brotherhood of Locomotive Engineers; the Brotherhood of Locomotive Firemen and Enginemen; the Order of Railway Conductors; the Brotherhood of Railway Trainmen; the Order of Railroad Telegraphers; and the Brotherhood of Maintenance of Way Employees and Railway Shop Labourers.

#### **Case No. 385—Canadian National Railways (Central Region) and Order of Railway Conductors and Brotherhood of Railroad Trainmen.**

Article 32 of the Trainmen's schedule provides that trainmen handling trains which are annulled or tied up between terminal points of order of the Railway shall be paid on the basis of actual miles run or hours worked up to the place and time of the tie-up, and thereafter hour for hour on the basis of one-eighth of the daily rate for the first eight hours out of each twenty-four hours during which the train is held. On January 4, 1931, a conductor and crew were ordered for an extra train leaving Ottawa to Alice Pit and returning to Pembroke, to "tie-up" there until January 5, then returning to Ottawa. Claiming that Pembroke was not a recognized terminal for unassigned crews the employees contended that, in accordance with Article 32, the crew should be paid for 100 miles on account of having been tied up at that point for ten hours and five minutes. "Terminal" is defined in Article 32 as the regular points between which crews run regularly. The Company contended that Pembroke was the final terminal for which this crew were ordered from Ottawa, and that they were automatically released at that point; when they came on

duty at Pembroke, it was claimed further, the crew started an entirely new trip. Moreover the company maintained the train in question was not annulled or tied up between terminals, and the usual understanding of Articles 32 and 33 was that unassigned crews could be ordered into terminal points for assigned crews, whether or not unassigned crews are regularly operated between such points.

The Board sustained the claim of the employees.

#### **Case No. 386—Canadian National Railways (Central Region) and Brotherhood of Railroad Trainmen.**

A yard man claimed that he should have been permitted to exercise his seniority to a position as yard helper at St. Clair tunnel. Some time previously he had been assigned to a position as foreman in the tunnel, but had later been displaced by a foreman who was his senior. In the opinion of the employees he should then have been allowed to displace any helper who was his junior either in Sarnia Tunnels or Sarnia yard; but instead, after being allowed to exercise his seniority for four days he had been displaced by a junior yardman. The Company explained that an error had been made in the assignment of the claimant to the position of foreman in the tunnel, and that the claim was due to his failure to indicate his choice of jobs as helper in the event that he should not be successful in obtaining a position as foreman.

The Board denied the claim of the employees.

#### **Case No. 387—Canadian National Railways (Central Region) and Brotherhood of Railroad Trainmen.**

A question arose as to the placing on the seniority list of two former Express company employees whom the company appointed as passenger trainmen in advance of certain other employees in the passenger service, the latter having, in the employees' opinion, a prior claim. The Company stated that the two men were regarded as in passenger service from the time they began to handle express baggage on passenger trains. The Company explained further that a separate seniority group was maintained for passenger trainmen, and that men transferring from freight or yard service to positions as passenger trainmen were only

allowed seniority as passenger trainmen from the date of their transferring to passenger service.

The Board found that the seniority of the two men, as established on the consolidated seniority lists under an agreement effective June 1, 1929, appeared to be in accordance with their proper status; and therefore denied the claim of the employees.

**Case No. 388—Canadian National Railways (Central Region) and Brotherhood of Railroad Trainmen.**

A brakeman claimed that the amount of the earnings of a relief man for "dead heading" (or returning to his home station) had been used to make up the monthly guarantee as to wages payable which is provided for under Article 7, rule (a) of the Schedule. This article enumerates the payments that may or may not be included to make up the amount of wages guaranteed, and specifies that "extra service to make up guarantee relates to passenger service." The employees contended that the Article did not justify the company in charging against the guarantee of the man who was relieved (the claimant in the present case) the mileage made by the man who was called by the company to relieve him; and that the company was responsible for "dead-head" mileage in furnishing the relief.

The Board sustained the claim of the employees.

**Case No. 389—The Temiskaming and Northern Ontario Railway Commission and Brotherhood of Locomotive Firemen and Enginemen.**

A controversy arose as to the manner of assigning certain enginemen in yard service at North Bay Junction, where there were five yard engine shifts to which four engineers and five firemen were usually assigned. The firemen claimed that men on the engineers' list were being used to displace firemen, contrary to the condition set forth in Local Rule No. 23 of the joint schedule. They alleged that the rule was violated by the assignment of four men to five shifts, and that the men were required to work a second shift in a 24-hour period at straight time rate, instead of at the rate of time and one half, as provided in the contract. As a result it was claimed that one more engineer was used firing than was necessary, while one fireman remained out of work. They asked that five engineers be placed on these five assignments at once, and that one fireman be returned to work.

The railway contended that the assignments in question were set up some time ago when the Railways were busy and a number of enginemen were in construction service; the firemen, they stated, had known of that arrangement and had entered a protest, but they had subsequently withdrawn their protest and concurred.

This case was removed from the docket of the Board, in the hope that following its discussion before the Board it might be possible to have it settled by local arrangement.

**A. F. of L. and International Co-operation**

Reference was made in the LABOUR GAZETTE, January, 1932, Page 45, to an invitation from the International Federation of Trade Unions to the American Federation, to participate in an effort to promote the unity of labour with the object of surmounting the economic crisis throughout the world. At a meeting of the Executive Council of the American Federation of Labour held at Washington on February 6, 1932, it was decided that world conditions made it inadvisable for the Federation to participate in a special international conference of labour organizations which had been proposed by the International Federation of Trade Unions. President, William Green, subsequently made the following statement:—"While sympathetic with the economic problems of Europe and the rest of the world, and while the American Federation of Labour desires to be serviceable and helpful in every

way possible through the extension of international co-operation, the Executive Council is of the opinion that it would be a most inopportune time to hold an international labour conference. In making this decision the Executive Council kept steadily in mind the political and economic situation in Europe, the disturbed condition in Asia, and the widespread unemployment situation which prevails throughout the United States. An appropriate and detailed reply to the invitation extended is being sent the officers of the International Federation of Trade Unions at Berlin".

The coal production from the mines of the Acadia Coal Co., New Glasgow, N.S. for the month of March, 1932, was 41,098 tons, and that from the mines of the Intercolonial Coal Co., was 11,738 tons.

## STRIKES AND LOCKOUTS IN CANADA DURING MARCH, 1932

THE number of strikes and lockouts in existence in Canada during March was eleven, as compared with seventeen in the preceding month. The figures recorded as to numbers of workers involved showed a similar decline, but owing to the existence of several strikes of coal miners in western Canada involving some 1,200 workers, the time loss recorded was almost twice as great as during the preceding month. In comparison with figures for March, 1931, almost twice as many strikes and lockouts were recorded. The number of workers involved, however, was slightly less than in the same month last year, while the time loss incurred showed little change, as during March last year some 1,500 women's clothing factory workers were involved in a dispute at Toronto.

Date	Number of disputes	Number of employees involved	Time loss in working days
*Mar., 1932 . . .	11	1,501	26,410
*Feb., 1932 . . .	17	3,611	14,679
Mar., 1931 . . .	6	1,635	25,026

\* Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration, and disputes involving less than six employees, are included in the published record only when ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes."

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Eight disputes, involving approximately 850 workers, were carried over from February, and three disputes commenced during March. Of the eleven disputes in progress during the month, two were recorded as terminated, both being in favour of the employer concerned. At the end of March, therefore, there were nine disputes recorded as strikes or lockouts in progress, namely: coal miners, Robb, Alta., coal miners, Blairmore, Alta., coal miners, Bellevue, Alta., two disputes of coal miners at Coleman, Alta., lumber workers, Campbell

River, B.C., compositors, Saskatoon, Sask., motion picture projectionists, Winnipeg, Man., and bowling alley pin boys, Vancouver, B.C.

The record does not include minor disputes such as are defined in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected, but which the unions concerned have not yet declared terminated. Information is available as to seven such disputes, namely: motion picture projectionists, Ottawa, Ont., February 23, 1931, one employer; photo engravers, Toronto, Ont., March 23, 1931, one employer; photo engravers, Toronto and London, Ont., Montreal and Quebec, P.Q., and Winnipeg, Man., May 4, 1931, one employer; motion picture projectionists, Montreal, P.Q., August 27, 1931, one employer; sawmill workers, Barnet, B.C., September 23, 1931, one employer; cooks and waiters, Edmonton, Alta., September 29, 1931, one employer; and lumber workers, Campbell River, B.C., December 3, 1931, one employer.

A minor dispute involving six pin boys in a bowling alley in Prince Albert on March 3, 1932, was reported in the press. Information secured by the Department is to the effect that the boys were discharged for refusing to shovel snow without remuneration.

Employees, twenty-nine in number, engaged in wrecking buildings in St. Catharines, Ont., ceased work on March 3, 1932, from 10 a.m. until noon, demanding an increase in wages above the twenty cents offered. As a result of the intervention of the Mayor of the city the employer raised the rate to thirty cents and work was resumed, the dispute being recorded as a minor strike.

In connection with the strike of coal miners in the Estevan district in Saskatchewan from September 8 to October 8, 1931, a number of strikers and others were charged with riot, unlawful assembly, etc., chiefly on September 29, when three strikers were killed (LABOUR GAZETTE, October, 1931, p. 1067). During March a number of these were convicted, eight being sentenced to terms of imprisonment between three months and two years, three being fined, two given suspended sentences, and one bound over to keep the peace. Two are to be tried again at the fall assizes, the jury having disagreed and two were acquitted.

A cessation of work by loggers, sixty in number, in one camp at Goldstream, B.C., on February 27, 1932, for one day, in sympathy with a demonstration of unemployment workers at Victoria, B.C., on that day, was

reported to the Department too late to be included in the March issue of the **LABOUR GAZETTE**.

Disputes involving seventy-five women's clothing factory workers in two establishments in Montreal and twenty-four fur workers in one establishment in Toronto early in the year have been reported to the Department during the month. In each case the cause appears to have been an alleged violation of the agreement. Complete reports have not been received but employment conditions do not appear to have been affected for some time.

During March reports were received as to a strike during February of coal miners in

one mine at Bienfait, Sask., as to which a partial statement appeared in the March issue of the **LABOUR GAZETTE**. Twenty-five miners ceased work on February 23, 1932, the date of the sympathetic strike in the district, for four hours demanding the dismissal of certain miners, some not having joined the union and others not having paid their dues. The management pointed out that the agreement did not provide for union recognition or closed shop, and the employees returned to work.

A dispute involving employees in a lumber mill at Port Alberni, B.C., on March 3, 1932, has been reported in the press. Information has been received from the parties to the dispute which indicates that, on the re-opening

### STRIKES AND LOCKOUTS IN CANADA DURING MARCH, 1932

Industry, occupation and locality	Number of workers involved	Time loss in working days	Remarks
<b>(a) Strikes and Lockouts in Progress Prior to March, 1932</b>			
<b>LOGGING—</b> Lumber workers, Campbell River, B.C.	68	1,700	Commenced Feb. 6, 1932; for increase in wages and reduction in board; untermiated.
<b>MINING, NON-FERROUS SMELTING AND QUARRYING—</b> Coal miners, Robb, Alta.....	50	1,250	Commenced Dec. 12, 1931; against discharge of worker and charging for lamps alleged to be in violation of agreement; untermiated.
Coal miners, Blairmore, Alta.	300	7,500	Commenced Feb. 23, 1932; against dismissal of worker; untermiated.
Coal miners, Bellevue, Alta...	330	8,250	Commenced Feb. 24, 1932; in sympathy with miners on strike at Blairmore Feb. 23, 1932; untermiated.
Coal miners, Bienfait, Sask....	70	70	Commenced Feb. 22, 1932; against removal of check weighman; terminated Mar. 2, 1932; in favour of employer.
<b>MANUFACTURING—</b> <i>Textiles, Clothing, etc.—</i> Women's clothing factory workers, Toronto, Ont.	10	10	Commenced Jan. 25, 1932; against reduction in piece rates; terminated Mar. 1, 1932; in favour of employer.
<i>Printing, and Publishing—</i> Compositors, Saskatoon, Sask.	21	500	Alleged lockout; commenced Dec. 14, 1931; against decrease in wages; untermiated.
<b>SERVICE—</b> <i>Recreational—</i> Motion picture projectionists, Winnipeg, Man.	3	75	Alleged lockout; re union working conditions; untermiated.
<b>(b) Strikes and Lockouts Commencing during March, 1932</b>			
<b>MINING, NON-FERROUS SMELTING AND QUARRYING—</b> Coal miners, Coleman, Alta. .	325	3,575	Commenced Mar. 18, 1932; against alleged unfair distribution of work; untermiated.
Coal miners, Coleman, Alta...	300	3,000	Commenced Mar. 19, 1932; in sympathy with miners on strike at Coleman on Mar. 18, 1932; untermiated.
<b>SERVICE—</b> <i>Recreational—</i> Pin boys (bowling alley), Van- couver, B.C.	24	480	Commenced Mar. 7, 1932; against reduction in piece rates; untermiated.

of the mill after alterations to machinery, work was delayed for an hour for negotiations as to the wage scale which had been lowered owing to conditions in the lumber industry. It is reported that the employees voted by a large majority to accept these terms but that a number refused to work and picketed the establishment.

A number of disputes have been reported during the month involving men on unemployment relief work, in all cases receiving subsistence for which some work was performed or might be required. As no relation of employer and employee was involved these are not included in the record. No disputes involving unemployment workers, employed at stated wages, have been reported.

The following paragraphs give particulars regarding certain disputes in addition to the information given in the tabular statement:

**COAL MINERS, ROBB, ALTA.**—At the end of March this dispute, which commenced on December 12, 1931, was reported to be un-terminated.

**COAL MINERS, BIENFAIT, SASK.**—As stated in the March issue of the *LABOUR GAZETTE*, the employees in one mine had ceased work on February 22, 1932, following the removal of the check weigher, the employer stating that under the provisions of the Mines Act the check weigher must be one of the employees in the mine. Representatives of the strikers reported that the mine operator refused to negotiate with the mine committee as required under the agreement. The leaders of the strikers were arrested on complaint of the operator on a charge of violation of the Industrial Disputes Investigation Act. The operator of the mine was then charged with violation of the provincial mining law. On March 5 the arrested miners were fined \$20 and costs for violation of the Industrial Disputes Investigation Act. The charge against the operator for violation of the provincial mining act was dismissed. On March 2 a number of the strikers had returned to work and the others were replaced. Particulars as to the first of these cases appear on page 390, and a note on the case under the Mines Act is given among the Recent Legal Decisions in this issue.

**WOMEN'S CLOTHING FACTORY WORKERS, TORONTO, ONT.**—This dispute has been reported as terminated on March 1, 1932, those on strike having returned to work from time to time.

**MOTION PICTURE PROJECTIONISTS, WINNIPEG, MAN.**—Employees in one theatre at Winnipeg on February 27 were discharged and replaced by non-union operators, the management stating that a change in policy had been

decided upon. The theatre had been operated on union conditions under a verbal agreement, and owing to a falling off in revenue the union had agreed to the employment of three men instead of four provided two were always at work. The management proposed a reduction in wages and a reduction in staff to two. The union offered to agree to a reduction of \$5 per week, but this was not accepted and the union operators were discharged. Further negotiations were carried on and conciliation by the provincial Commissioner of Labour was offered but refused by the management.

**COAL MINERS, COLEMAN, ALTA.**—Employees in one mine ceased work on March 18 following the temporary closing down of work in certain places where twelve men were at work. The strikers demanded an equal distribution of work. The employer stated that the closing down of these places temporarily was in accordance with the practice of former years. At the end of the month the dispute was un-terminated.

**COAL MINERS, COLEMAN, ALTA. (SYMPATHETIC).**—Miners in another colliery at Coleman ceased work on March 19, 1932, in sympathy with the miners involved in the strike above mentioned. At the end of the month the dispute was reported to be still in progress.

**PIN BOYS (BOWLING ALLEY), VANCOUVER, B.C.**—Employees in one establishment ceased work on March 7, 1932, against a reduction in wages from 3 cents per string to 2 cents; also the abolition of the "boss" system and recognition of a committee of the Amusement Workers' Union of Canada, recently organized and said to be affiliated with the Workers' Unity League. The employer reported that the strikers were immediately replaced, but the establishment was closely picketed and police were called upon to deal with disturbances in connection with the picketing, some arrests being made. At the end of the month no settlement had been reported.

Based on figures collected by the United States Bureau of Labour Statistics in a study of the men's clothing industry in the United States, average full-time hours per week in 1930 were 44.3, or 0.3 hour per week more than in 1928; average earnings per hour were 70.1 cents, or 3 cents less than in 1928; and average full-time earnings per week were \$31.05, or \$1.11 less than in 1928. These averages are for 33,404 wage earners of 212 representative establishments in 12 large cities and 2 groups of small cities. One group is in eastern Pennsylvania, outside of Philadelphia, and the other in northeastern New Jersey, outside of Newark.

## STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month, bringing down to date that given in the issue for February, 1932, in the review of Strikes and Lockouts in Canada and other countries, 1931. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1919 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, and for such countries the latest figures are not for relatively recent dates.

### Great Britain

The number of disputes beginning in February was 29 and 15 were still in progress from the previous month, making a total of 44 disputes in progress during the month, in which 18,500 workers were involved. The time loss in working days for the month was 178,000 working days. Of the 29 disputes beginning in February, 6 were over proposed reductions in wages, 11 over other wage questions, one over a question of working hours, 8 over questions respecting the employment of particular classes or persons and 3 over other questions of working arrangements. Settlements were reached in 29 disputes, of which 8 were in favour of workers, 14 in favour of employers and 7 ended in compromises; in the case of five other disputes, work was resumed pending negotiations.

The strike of 4,000 lightermen, watermen, tugmen and bargemen of the Port of London, which began January 4, in protest against reductions in wages and which was mentioned in the LABOUR GAZETTE for February and March, was terminated February 17 and the reduction in wages accepted.

The strike of 3,300 wool textile operatives at Dewsbury and Batley which began January 22 and subsequent dates, in protest against proposed reduction in wages and which was mentioned in the March LABOUR GAZETTE, had terminated by February 13 and the reductions in wages were accepted.

The dispute involving 4,000 weavers in the cotton manufacturing industry at Burnley, which began February 8 as was reported in the March LABOUR GAZETTE, had terminated by February 20 in all but one establishment. Employers agreed to abandon the new working conditions to which the strikers had objected.

### Irish Free State

The number of disputes which began in the year 1931 was 60 as compared with 83 in 1930. The number of workers involved in all disputes in progress during the year was 5,431 and the time loss 310,199 working days for the year. Of the 60 disputes beginning in 1931, 35 were over wages questions, 18 over the engagement or dismissal of workers, 4 over hours of labour and 3 over other conditions of employment.

During the year settlements were reached in 67 disputes. The workers' claims were wholly admitted in 18 cases, admitted in part in 6 cases and rejected in 11 cases. The employers' claims were wholly successful in 6 cases, successful in part in 15 cases and rejected in 5 cases. In six other disputes there was an indeterminate result.

Eighty nine per cent of the total time loss for the year was due to the dispute in the building trades at Dublin, which lasted from January until May.

### France

Statistics for the third quarter of 1931 showed the number of disputes beginning in July as 28, involving 11,042 workers; in August, 13 disputes involving 5,475 workers; and in September 22 disputes involving 1,333 workers. Over half of the number of disputes in each month were over wages questions.

### Netherlands

Preliminary figures for the year 1931 show the number of disputes existing during the year as 208, involving 786 establishments and 25,100 workers. The time loss was 764,000 working days for the year.

### New Zealand

The following table is a summary of disputes for the year 1931:

INDUSTRIAL DISPUTES FOR THE TWELVE MONTHS ENDED DECEMBER 31, 1931

Industry	No. Disputes	No. Firms involved	No. Workers affected	Working days lost	Loss in Wages
					£
Coal mining.....	16	19	5,144	47,107	43,406
Threshing mills.....	1	1	5	40	15
Shipping.....	6	16	726	1,098	977
Meat freezing.....	1	1	481	241	146
Totals.....	24	37	6,356	48,486	44,544

### United States

The number of disputes beginning in January was 63, and 61 were in effect at the end of the month. The number of workers involved in disputes in effect at the end of the month was 6,649 and the time loss 133,944 working days for the month.

A strike of 12,000 coal miners in the Hocking Valley, Ohio, began February 1, against proposed reductions in wages and for union recognition. Several hundred other workers became involved March 1.

At the end of March a number of wage agreements terminated in all parts of the bituminous coal belt including Illinois, Ohio, Indiana and West Virginia. In Illinois and Indiana as no new agreements were reached, work was discontinued in the mines affected at

the end of March. In Ohio and West Virginia the union called a strike on April 1. It was reported that 75,000 bituminous coal miners were thus thrown out of work on April 1, including between 43,000 and 46,000 in Illinois, 25,000 in Ohio and 4,000 in Indiana.

On March 14, a strike of anthracite coal miners in Pennsylvania began in the district around Wilkes-Barre and Scranton and around Pottsville and Shenandoah. This was a strike of miners who had broken away from the United Mine Workers' Union and their demands were for equalization of work. The strike leaders claimed that 52,000 miners were out on strike, while the United Mine Workers' Union officials claimed that not more than 12,000 had come out. It was reported that work was resumed April 2.

### Relief of "White Collar" Unemployed in U.S.A.

A report prepared for the President's organization on Unemployment Relief by the Women's Bureau of the United States Department of Labour gives the results of a study of plans in effect in various localities, to assist the unemployed professional, clerical, business, and related groups. Some of the jobs that have been provided for such workers are as follows:

*Special Projects.*—Traffic count; study of traffic accidents; topographical surveys; surveys of parks, docks, markets, tenements, water supply, and sanitary districts; tree surgery; compiling city directory where no funds heretofore available; checking on public school attendance; checking and bringing up to date post maps; entertaining in city hospitals and asylums; office workroom where work from non-profit-making institutions is done free of charge; police duty for four hours each day at street crossings near schools; making maps of city showing work completed and work to be done; providing women to care for the sick in their homes; setting up a workshop where small fancy articles are made for a sale; canvassing from house to house to locate jobs; giving out supplies from central warehouse (storeroom); bringing city records up to date; men owning cars were employed for chauffeur service, taking patients to hospitals, and delivering agencies' grocery orders to those in need; re-varnishing and cleaning desks in city offices; in an epidemic, men were employed to put up signs.

*Supervisory Service.*—As foremen, inspectors, timekeepers, and paymasters on work on parks and buildings and around municipal buildings. Work on bridge building and re-
